Introduction

Organizations striving to be employers-of-choice in different countries around the world need access to current information about the economic, social, political, and demographic characteristics of the countries where their employees live and work.

The Country Profile Series focuses on statistics that can guide decision-making at the workplace: workforce highlights, economic highlights, and population highlights. This Country Profile is part of a set of resources about the United States available on the website of the Global Perspectives Institute: www.bc.edu/agingandwork.

Workforce Highlights

- 49% of the total United States population is in the labor force.\(^1\)
- The labor force is projected to slightly increase from 141.0 million in 2000 to 191.8 million in 2050 (with annual growth rate of 0.6%).\(^2\)
- The December 2007 unemployment rate was 5.0%.\(^3\)
- In December 2007, the average hours worked per week by American employees (working either part-time or full-time) in the private sector was 33.8.\(^4\)
- In 2006, 16.3% of the labor force was part-time.\(^5\)
- 10.5% of the total civilian employed labor force reported being self-employed in 2004.\(^6\)
- As noted in Figure 1, 49% of the United States population is in the labor force, compared to 51% in Canada and 41% in Mexico.\(^1,7\)
Figure 1 compares the rate of employment as a percent of the total population in the United States with other countries with high gross national incomes. The employment rates of the countries included in Figure 2 range from 42% in Italy to 53% in Germany.

“Gross national income is GDP less net taxes on production and imports, less compensation of employees and property income payable to the rest of the world plus the corresponding items receivable from the rest of the world (in other words, GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units).”

OECD Factbook

Figure 2 compares the rate of employment as a percent of the total population in the United States with other countries with high gross national incomes. The employment rates of the countries included in Figure 2 range from 42% in Italy to 53% in Germany.

“Gross national income is GDP less net taxes on production and imports, less compensation of employees and property income payable to the rest of the world plus the corresponding items receivable from the rest of the world (in other words, GDP less primary incomes payable to non-resident units plus primary incomes receivable from non-resident units).”

OECD Factbook
The employment rates among persons aged 15-64 years are presented in Figure 3. 78 percent of men and 66 percent of women in this age group are employed in the United States.²

\section*{About the Institute}

Established in 2008 by the Center on Aging & Work, the Global Perspectives Institute is an international collaboration of scholars and employers committed to the expansion of the quality of employment available to the 21st century multi-generational workforce in countries around the world.

The Global Perspectives Institute focuses on innovative and promising practices that might be adopted by employers and policy-makers.

The Institute's research, publications, and international forums contribute to:

\begin{itemize}
\item a deeper understanding of the employment experiences and career aspirations of employees of different ages who work in countries around the world;
\item informed decision making by employers who want to be employers-of-choice in different countries; and
\item innovative thinking about private-public partnerships that promote sustainable, quality employment.
\end{itemize}
The Center on Aging & Work at Boston College, funded by the Alfred P. Sloan Foundation, is a unique research center established in 2005. The Center works in partnership with decision-makers at the workplace to design and implement rigorous investigations that will help the American business community prepare for the opportunities and challenges associated with the aging workforce. The Center focuses on flexible work options because these are a particularly important element of innovative employer responses to the aging workforce. The studies conducted by the Center are examining employers’ adoption of a range of flexible work options, the implementation of them at the workplace, their use by older workers, and their impact on business and older workers. The Center’s multi-disciplinary core research team is comprised of more than 20 social scientists from disciplines including economics, social work, psychology, and sociology. The investigators have strong expertise...
