There is an old adage that says “dead men tell no tales,” but forensic anthropologist Ann Marie Mires, PhD would beg to differ. Dr. Mires has made a career out of examining human remains and interpreting the information they hold about how a person lived and died. Over the course of her career Mires has worked extensively to identify the remains of homicide victims, including Molly Bish and many of the victims of James “Whitey” Bulger. Please join us as Dr. Mires shares how she interprets these tales and what they mean to forensic practice.

Sexual assault facilitated by drugs is an all too common occurrence. While the situation is often thought of as something illicit being placed in a drink, the notion of drug assisted assault should be much more broad. As predators become more cunning and resourceful in their attacks, so too should health care and legal practitioners make themselves aware of these changing tactics and use their knowledge to proactively address the needs of victims. Featuring Sergeant Pi Heseltine of the Massachusetts State Police.

Scientific advances have made the infallibility of DNA evidence common knowledge in the 21st century, but what about its limitations? Assistant District Attorney David Deakin was confronted with this question when a rare case involving identical twin brothers landed on his desk. NBC’s Dateline follows Mr. Deakin as he is forced to pursue the perpetrator with some old fashioned detective work. Featuring Fred Rothenberg, producer of NBC’s Dateline and David Deakin, assistant district attorney for Suffolk County.

Forensic applications in anthropology Wednesday, November 4, 2009 4 PM – 6 PM Higgins 300 Boston College
