Donovan Urban Scholars must enroll in EDUC432.08. The primary goal of this capstone seminar is to initiate teacher candidates into the practice of teacher research or collaborative inquiry for action. Collaborative Inquiry for Action is an ongoing, collaborative process of systematic and self-critical inquiry by educators about their own schools and classrooms in order to increase teachers' knowledge, improve students' learning, and contribute to social justice. This final project will be presented at a roundtable presentation at the end of the semester and also satisfies the M.Ed., MAT, MST Comprehensive Examination in Education EDUC8100.

**Credits:** 2  
**Room and Schedule:** Tu 07:00PM-09:30PM

EDUC743601
Curriculum Theories and Practice
Kim, Han Gil
Spring 2023
Asks teachers to analyze the philosophical underpinnings of educational practices. Also asks teachers to examine their own philosophies of education and to construct meaning and practice from the interplay between their beliefs and alternative theories. Designed for individuals advanced in their professional development.

EDUC743801
Educating Learners with Disabilities
Francis, Heather
Spring 2023
This course focuses on the education of students with disabilities and other learners from culturally and linguistically diverse backgrounds. The goal of the course is to promote access to the general curriculum for all students through participation in standards-based reform. Universal Design for Learning (UDL) provides the theoretical framework for this course. Through an examination of historical milestones, landmark legislation, systems for classification, approaches to intervention, and the daily life experiences of diverse learners, students acquire knowledge about diversity and the resources, services, and supports available for creating a more just society through education.

Teaching Language Arts
Merlino, Michele M
Spring 2023
Examines the development of written and spoken language and methods of instruction for oral and written language from the preschool years through early adolescence. Students learn strategies for identifying children's areas of strength and weakness and to plan instruction. Addresses the needs of children from non-English speaking homes. Expects students to spend at least 16 hours distributed across at least eight sessions in a classroom or other setting where they can work with one or more children.

Room and Schedule: Campion Hall 16 W 07:00PM-09:30PM
EDUC754801
Teaching Report and Explanation Writing to K-8 Students
Brisk, Maria E
Spring 2023
This is a project-based course where groups of participants will collaborate to develop a writing unit in a genre appropriate for their grade level. Using a genre-based pedagogy informed by systemic functional linguistics, participants will learn what and how to teach reports and explanations in the context of social studies and/or science. Features of the genres demanded in elementary and middle schools will be learned and practiced. The strong emphasis on language development distinguishes this approach from others currently used in schools. The approach to teaching guides teachers in ways of apprenticing students to writing that builds confidence and success.

Bilingual Literacy and Literature
Proctor, Charles P
Spring 2023
This course is designed to provide pre- and in-service practitioners exposure to contemporary issues, perspectives, and approaches for literacy instruction in bilingual education settings. These bilingual education settings include transitional and dual language bilingual education programs, and we will explore literacy instruction as it pertains within and across these different program models. At its core, the course is designed to model the types of instructional approaches it espouses. The course will be delivered bilingually, in Spanish and English. As such, the language of instruction of the course, as well as expectations for participation, are fluid and variable. The course targets a range of literacy related topics (see topics grid below) all designed to orient the bilingual educator toward bilingual literacy instruction in contemporary bilingual education contexts.

EDUC920101
Discourse Analysis
Bottema-Beutel, Kristen M
Spring 2023
Discourse analysis (DA) is a broad field of research which incorporates theory and method from linguistics, anthropology, and sociology, among other disciplines. The common thread across these areas of scholarship is a commitment to studying language in action; to understanding what people do and mean with language, how people interact with language, and what people come to expect with language. Close analysis of language in context can illuminate the processes through which social constructs such as identity, power, and social selves are built. This course will cover the theoretical foundations of DA, in tandem with the methodological implications of each theory. Topics will include Speech Act theory, sequence organization and Conversation Analysis, Narrative Analysis, Classroom Discourse and Critical Discourse Analysis. The course will place an especial focus on the contributions of discourse analytic approaches to understanding educational contexts. Students will be asked to collect, transcribe, analyze, and present their own data over the course of the semester.

EDUC930101
Design of Learning Environments in the Learning Sciences
McNeill, Katherine L
Spring 2023
The design of learning environments (e.g., curriculum, technology tools, professional
development, museum exhibits) and individuals' experiences within those environments
significantly impact both teacher and student learning. The learning sciences is an
interdisciplinary field of research that draws from a variety of domains such as cognitive science,
educational psychology, and education to design effective learning and teaching environments.
The goals of the learning sciences are to 1) understand the physical, cognitive and social aspects
of learning environments and 2) use these understandings to design more effective learning
environments. Learning scientists study a variety of environments from formal settings such as
schools to informal settings such as museums, jobs and interactions among peers. In this
course, we will examine different learning environments as well as various aspects within those
environments. For example, we will examine curriculum to evaluate the scaffolds to support
student learning, analyze digital learning environments for professional development to support
teacher learning and critique video of classroom discourse to examine student interactions and
community development. In this course, we will consider the environment both as
conceptualized by its designers (the design) and as it is experienced by participants as learning
interactions unfold in particular settings (the enactment) to evaluate the effectiveness of those
learning environments.

Historical and Political Contexts of Curriculum
Wargo, Jon M
Spring 2023
Introduces Ph.D. students in Curriculum and Instruction to the major curriculum movements in American educational history by examining the history and implementation of curriculum development on the macro and micro levels of schooling. Focuses on key campaigns and controversies in curriculum theory and practice, using primary source materials to place them within the academic, political, economic, and social contexts that have marked their conceptualization, and change inside and outside of schools.

Dissertation Seminar in Curriculum and Instruction
Proctor, Charles P
Spring 2023
This is a student-centered seminar that is aimed at assisting doctoral students in identifying, shaping, and defining a research topic. Students will be expected to develop an Intent to Propose a Thesis, and to work toward the development of a full-scale draft of a Thesis proposal. Prior to the completion of the seminar, students will be expected to have established a Dissertation Committee.

African and African Diaspora Studies Courses: Fall 2022

AADS110801
Intro to African Diaspora Literatures
Frederick, Rhonda
Fall 2022

By studying creative writing by African writers and writers of African descent, this course examines how diasporic Africans created viable lives for themselves in the "New World." We will identify commonalities as well as discontinuities that define the experiences of African and African descended peoples in Nigeria, Canada, the US, and the Caribbean. Acknowledging that African Diaspora writers share a common set of experiences (cultural traditions, domination and resistance), we will also examine experiences that are unique to each time and place. This two-part critical process will result in a complex view of literature that derives from it.

AADS111001
Introduction to African Diaspora Studies
McGuffey, Clifton S
Fall 2022
A survey of the African continent and the Diaspora that would include geography, history, politics, economics and literature. The purpose of the course is to introduce students to specific historical, cultural, social and political topics related to Africa and the African Diaspora. Because the scope of the course is so vast, we will explore important issues and themes to give students a desire to further pursue more specific classes in African and African Diaspora Studies. Boston College faculty members will be invited to lecture in their area of expertise specific to Africa and the Diaspora throughout the semester.

AADS111401
When Gods Begin Again: Intro to African and African Diaspora Religions
McElwaine, Michelle L
Fall 2022
This introductory course examines Indigenous African and African Diaspora religions from an interdisciplinary perspective. We explore Yorùbá and other African religions, along with African Christianity, Islam, Haitian Vodou, Cuban Santería, Brazilian Candomblé, Sango Baptist of Trinidad and Tobago, Rastafari and Obeah of Jamaica, Black American conjure, and Oyotunji Village. Important themes of religions in Africa and the Afro-Atlantic Diaspora are addressed, such as: the veneration of God(s), Spirit(s), Ancestors, and the natural world; divination, initiation, sacred space, and healing; the impact of slavery on conversion and continuity; fetish as a colonial construct; globalization, race, gender, and power. Ultimately, this course encourages students to reevaluate their understanding of Africana religions, recognize diverse cultural practices and ritual knowledge systems, and engage with oral, written and audio/visual texts that underscore the values of these traditions.

**AADS177001**  
**Gospel Music Workshop**  
**Jacob Dorman, Shannon D**  
**Fall 2022**

This class will examine Black gospel music with an emphasis on choral music and oral traditions that capture the Black experience in America from a historical, socio-political and multicultural standpoint. The syllabus and repertoire is reflective of the great faith tradition that is an integral part of black culture; in that it includes the breadth of musical expression in the Black worship experience. Students will analyze the importance of Black gospel music and its vital role in shaping global music trends. Spirituals, traditional gospel, contemporary gospel, as well as religious music of the European tradition will be reviewed closely from a historical and musical standpoint. The class will comprise of equal parts lecture and practicum (Voices of Imani Gospel Choir). The latter half compromising of the practicum (VOI) will help students engage in practical learning of songs explored in the lecture, consequently accomplishing the age-old institution of oral tradition in Black history.

**Credits:** 1

Black Popular Culture
Kizito, Kalemba
Fall 2022
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In this class, we will critically examine the development of black popular culture from blackface minstrelsy in the 1800s to present day. While we will primarily focus on black popular culture in the United States, we will also consider the work of diasporic authors and artists and the international implications of American media. Readings will draw upon theories and concepts in media studies, cultural studies, and rhetoric to center our discussion of black popular cultural texts such as television shows, films, music, poetry, and fashion.

Music and Social Justice
Jacob Dorman, Shannon D
Fall 2022
This course examines influential musicians and their artistic endeavors towards the path of social justice, education and awareness, with a special focus on African American musicians and their contribution to the world of entertainment. Emphasis will also be on social movements, activism, industry commodity and the direct correlation between music and society. Students will be encouraged to analyze music through lyrics, and song form; while understanding the historical, political and social climates surrounding these artistic ventures. The conclusive expectation of this class is that students understand the significant impact of music on a global scale and be mindful that it is a powerful tool that can be utilized to educate, inspire, create awareness and unite humanity.

Black Feminisms 101: From Harriet Tubman to Beyoncé
Prince, Alanna M
Fall 2022
Black feminists have long explored the question of race versus gender in their politics, theories, and writing. This class takes a closer look at the intersection of race and gender by using Black feminist thought as a lens to examine literature and popular culture. We will read writers and theorists from Africa and the diaspora to provide definitions of Black feminism. We consider how race and gender have been thought about over time.

AADS244201
African Politics
Honig, Lauren
Fall 2022
This course examines key questions and debates in the study of politics in Africa. Why and when is ethnicity salient in elections? If state boundaries in Africa are largely colonial creations, why are they so resilient? Why are some countries more prone to civil war? What is the relationship between elections and democracy? How do historical legacies impact contemporary politics? The goal of this course is to provide students with analytical tools to understand a number of questions that are of interest to contemporary politics in Africa. Using the methodologies of comparative politics, we will examine both broad cross-national patterns and focused case studies in this class.

**From Slave Patrol to the War on Crime: Policing Blacks Across American History**

**Summers, Martin A**

**Fall 2022**

During the "racial reckoning" in the summer of 2020, Americans engaged in a lot of discussions about race and the criminal justice system - and especially policing and its historical connections to slavery. While containing some truth, this particular framing of policing obscures a more complex history. This course will explore the larger history of policing Black Americans, from slavery to the early twenty-first century. Topics will include: race and policing in the antebellum period; legal and extralegal forms of policing Blacks in the Jim Crow era; mass incarceration in the late-twentieth century; and activism against the carceral state.

AADS325001
Black Movements
Curseen, Allison S
Fall 2022
This course explores the relationship between black political movements and black attention to bodies, material relations, and the matter of everyday life. We will examine instances of black freedom movements from 1800s onward with an attention to the role and articulation of black physical movement, including the cramped cargo-movement of Henry Box Brown’s escape; freedom workshops on falling for Civil Rights marches to the important matter of bodies in the street for "Black Lives Matter" demonstrations. We will focus on how the embodied nature of black political movements serves both as a way of fighting for political inclusion and as an alternative way of relating and living that renders the desirability of inclusion into the exclusive structures of American society altogether questionable.

Community Advocacy and Research Engagement
Abowd, Thomas P
Fall 2022
CARE is a two-semester course (SOCY 3254/3255) that offers leadership, research, and public policy training for students interested in working with Latino, Asian American and/or African Diaspora communities. In fall, students in SOCY3254 learn the process of community-based research and its methodologies, and begin to design a proposal for an independent study for spring. In the Spring, students sign up for SOCY3255 in conjunction with a Readings and Research to conduct their projects. The Spring seminar complements the R&R serving as a forum for students to discuss their research and continue to develop their oral presentation skills.

Trauma, Culture & Coping
McGuffey, Clifton S
Fall 2022

This seminar will introduce students to various approaches to trauma and traumatic impact. The course is designed for students who seek a scholarly understanding of trauma, as well as those who plan to provide direct services (e.g., therapists, social service workers, etc.) and/or to inform policy. We will examine the sociological, psychological, and service oriented and policy implications of these approaches. Multiple types of trauma will be conceptualized and investigated. Larger socio-cultural forces will be examined in analyzing both the exposure to and recovery from traumatic events. The seminar will be highly attuned to differences based on race, class, and gender.

**Seminar: Black Memoir Matters**  
**Ards, Angela**  
**Fall 2022**

This course explores what an engagement with life writing by black Americans teaches us about the United States and its quest for democracy. We will situate contemporary writers within a larger literary tradition, beginning with James Baldwin's *The Fire Next Time*, a quintessential civil rights movement text, followed by *Between the World & Me* by Ta-Nehisi Coates, whom Nobel laureate Toni Morrison called the Baldwin of the Black Lives Matter era. We will also consider how various forms of memoir---as open letter (Imani Perry's *Breathe* and Kiese Laymon's *Heavy*), as interconnected essays (Emily Bernard's *Black Is the Body*), as literary criticism (Farah Jasmine Griffin's *Read Until You Understand*)---meditate upon fundamental questions of citizenship, truth-telling, and fullest human blossoming.

The Underground Press
Ards, Angela
Spring 2023
Note to Journalism minors: this course satisfies the requirement for an elective with a "critical" orientation.

Note to all students: This course is included in CORE - Engaging Differences and Justice.

The underground press was a vast network of loosely affiliated newspapers that emerged in the 1950s and 60s when young people asked very hard questions about the meaning of power and the role of the press. The outsider outlets spread through hundreds of communities throughout the nation, ranging from big city weeklies like "The Village Voice" and the Berkeley "Barb" to specialized periodicals representing the Black press, as well as other ethnic newspapers, progressive weeklies, and various conservative perspectives. This course examines the factors that helped pave the way for this journalism of dissent and how this history affects alternative media today.

AADS247001  
**Black and Popular: Speculative Fictions by Black Writers**  
**Frederick, Rhonda**  
**Spring 2023**  
This course asks: what do discussions of contemporary social issues look like when depicted in popular literatures written by writers of African descent? What is the benefit of fictionalizing these issues in genre literatures? Students address these questions by examining the forms of "speculative fictions" (specifically thriller, science fiction/fantasy, and mystery/detective) as well as urban romance to determine how each represents concerns of twentieth/twenty-first century black peoples in the U.S., Canada, Jamaica, and Martinique. Our focus on these genres' explorations of race, class, culture, incest, social engineering, and intimate relationships is complemented by socio-historical studies of these issues and countries.

Spring 2023  
Difference is a fact of the human condition. What do we learn about ourselves and Others in relational encounters marked by difference? Differences can divide communities, societies, countries and perpetuate violence and suffering. Yet, if faced with courage, integrity, and inquiry, these same differences can lead to authentic connections that benefit individuals and their societies. Effective communication requires study and practice, intense intellectual focus, and genuine emotional exploration. **Satisfies the required theory course in the Communication major**

Racialized Medicine
Best, Latrica E
Spring 2023
This course is designed to introduce students to sociological and other interdisciplinary approaches to how race and racism are defined, employed, and contextualized in health and medicine. Though we will cover an array of theoretical perspectives regarding race and its impact on health, the core theoretical underpinnings of this course are rooted in the racialization process. The contemporary readings address four themes: theoretical and methodological perspectives of race, racism, and health, social processes and the racialization of health, health inequities across the life course, and institutional pursuits of health equity. We examine the importance of intersecting identities throughout the course.

Surveillance, Media and Contemporary Society
Kizito, Kalemba
Spring 2023
What is surveillance and how are surveillance technologies altering contemporary life? This course will explore this question by mapping the complex ways that media and digital technologies are used to acculturate us and generate acquiescence/resistance to surveillance in society. We will use film, television, and Internet media along with assigned readings to develop critical perspectives on surveillance and surveillance practices. The class is designed to give you freedom to develop and express your own ideas on the costs and potential benefits of surveillance-based societies. **This course satisfies one of two writing intensive courses required within the Communication Major.**

Visual Culture in Black America: The Art and Politics of Seeing and Being Seen
Jones, Jovonna
Spring 2023
This course fulfills the Race, Blackness, and Language requirement for English majors. In this course, we will examine the significance of visual culture for Black America, thinking critically about the art and politics of seeing and being seen. We will keep in mind the following questions: what does it mean to see blackness? How do images function as tools of empowerment and disempowerment, or representation and misrepresentation? What role does visual media play in Black life and imagination? Photography will be central to the study of visibility, but we will also consider what role other media play in the production of blackness as a visual phenomenon: literature, performance, and music videos. Authors and artists may include Frederick Douglass, Sojourner Truth, Ida B. Wells, W.E.B. Du Bois, Josephine Baker, Gordon Parks, Spike Lee, Hype Williams, Melina Matsoukas, Claudia Rankine, and LaToya Ruby Frazier. Assignments will include weekly discussion posts on readings and images featured in the course, and one creative project that may take the form of a photo-essay, critical paper, or video related to Black visual culture.

Spring 2023
Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. In this seminar students will read writing that depicts a variety of experiences but suggest that what constitutes an American identity is far from settled. Ethnic difference has a profound effect on personal and social understandings of what it means to be an American. As we discuss the literature, students will be expected to share their own personal narratives of growing up stories of race, ethnicity, class, gender, faith, and nationality and what it means to be American. Some of the writers we will read include: Jhumpa Lahiri, Amy Tan, Louise Erdrich, Chang Rae-Lee, Sherman Alexie, Sandra Cisneros, Junot Diaz, Edwidge Danticat, Mat Johnson and Ta-Nehisi Coates.

AADS552601
Islam in African American Cinema
Copeland, Kameron J
Spring 2023
This course is a historical exploration of Islam in African American cinema from the 1960s to the present. In this course, we will simultaneously trace the evolution of African American cinema alongside social, cultural, and political developments in U.S. Black American Muslim communities to understand how Black Muslims have historically and theoretically defined the cinematic. In addition to focusing on representation, we will explore the various ways Islam and the Islamic has been understood by Black filmmakers while investigating how Black Muslims have used cinema to resist dominant narratives. Representation, production history, and audience reception are approached through a cultural studies framework that emphasizes critical analyses of race, class, and gender.

This course explores the discourses of diaspora by taking into account the origins, various meanings, multiple dimensions, cultural iterations, and restrictive limitations of the term. How does "the practice of diaspora" translate in different forms of cultural work such as music, film, and literature? How has diaspora shifted in the age of globalization? How can we use diaspora as an analytical tool for reading from a critical perspective? We will consider closely how diaspora is theorized, practiced, and represented in various forms of cultural production. Therefore we will be taking an interdisciplinary approach reading across genre, medium, and disciplines.

ARTH333001
Spanish Art History: From Al-Andalus to Picasso
Palaez, Ana
Summer 2022
This course offers students a visual journey through the history of Spanish art, through the study and analysis of some of the most important works and artists, from the Islamic Art in Al-Andalus during the Middle Ages to present-day works. In each of the major eras, focus will be placed on the most outstanding artistic movements, especially on the painters that have played an essential role in bringing universal recognition to Spanish art. The course will be divided into two components—a theoretical and a practical part. The latter will be taught in the form of lectures offered at the classroom, and the former will consist of virtual cultural study activities, which will include virtual visits to some of the main monuments of the city of Toledo (Gothic Cathedral, Mosque of Bab-al Mardum, and the Toledo Synagogue) and Málaga (Picasso and Pompidou Museums); study of specific works of art at the National Archeological, Prado, Reina Sofia, Sorolla, and the Thyseen museum.

ARTH110701
History of Architecture
Orwig, Timothy T
Fall 2022
This course is a global overview of the history of architecture from the earliest surviving works through the present. Students will examine architecture, urban design, landscape design, and other allied fields such as architectural sculpture, interior design, and engineering. The course will consider vernacular design and the role of artists, artisans and patrons, as well as the effects of the Industrial Revolution, the rise of the skyscraper, and technological innovation. These forces will be viewed within larger economic, historical, religious, political, and social contexts. Satisfies Core requirement for Arts.

ARTH221201
East Asian Art and Architecture
Campbell, Aurelia
Fall 2022
This course surveys the visual and material culture of China, Korea, and Japan from Neolithic to present times. We will address a wide range of topics, including ancient tombs, Buddhist icons, landscape paintings, imperial palaces, tea culture, and contemporary art. Particular attention will be paid not only to the physical forms of these objects and buildings, but also to their makers, users, and audiences, as well their historical, religious, and social functions. Students will be introduced to various art historical methodologies and will deepen their knowledge about one aspect of East Asian art and architectural history through a substantial research project.

Early Renaissance Art in Italy
Leone, Stephanie
Fall 2022
Why was art made in the Renaissance? What did it mean to its original audience? This course studies connections between art, society and culture in Italy in the fourteenth and fifteenth centuries, a period of fertile artistic innovation. We will explore the prominent artistic centers of Florence, Siena, Rome, and Venice; powerful patrons like the Medici family; and renowned artists, such as Giotto, Brunelleschi, Donatello and Botticelli.

ARTH223201
Northern Renaissance Art
Golahny, Amy
Fall 2022
Painting in the Netherlands and in Germany in the fifteenth and sixteenth centuries. Emphasis will be on the style and the meaning of the great works of the masters of Northern Renaissance art such as Jan van Eyck, Hieronymus Bosch, Pieter Bruegel, and Albrecht Durer. We will discuss how the Renaissance in Northern Europe is different from the Italian Renaissance and what influences it absorbed from the Italians. We will consider the importance of printed pictures in this era when books and broadsheets assumed such a crucial role.

ARTH225701  
Nineteenth Century Art  
Wunsch, Oliver M  
Fall 2022  
An introduction to European and American art of the late eighteenth century to 1900. We will investigate the connections between art and contemporary developments, from the Industrial Revolution to globalization. The course will cover such artistic movements as Neoclassicism, Romanticism, Realism, Impressionism, and Post-Impressionism. Artists will include David, Goya, Turner, Monet, Van Gogh, and Rodin. We will look at their materials and techniques, and we will consider how they represented the issues animating their time: gender, race, class, technology, and power.  

Credits: 3  
Room and Schedule: Devlin Hall 227 TuTh 10:30AM-11:45AM  
Satisfies Core Requirement: Arts
ARTH225801
Modernism and the Avant-Garde, 1900-1945
Taube, Isabel
Fall 2022
In this introductory course we will unpack some of the crucial episodes in art of the first half of the twentieth century, including Italian Futurism and manifesto writing, Dada and the invention of the readymade, the "marvelous" in Surrealist painting and photography, De Stijl and the pursuit of abstraction, the Harlem Renaissance and cross-disciplinarity, and revolutionary Mexican Muralism. We will explore how these avant-gardes sought to break down the barrier between the making of art and the making of life itself, inventing ways of sliding art into the everyday lives of people on the street, at home, and in the factory. Why, these artists ask again and again, must art be siloed in privileged gallery spaces that uphold repressive models of gender, class, and race? What new utopian futures are opened up when these spaces are negated or left behind?

ARTH228501
History of Photography
Anderson, Asher
Fall 2022
This course looks at the evolution of vision and practice through a selected survey of the history, technology, and aesthetics of photography from the earliest experiments in the medium to the present day. We will focus primarily on the photographic practice in Europe and the U.S. In this course, we will investigate the social cultural, and political implications of the revolution of photography, paying critical attention to its manipulations within the contexts of entertainment, advertising, the state, science, journalism, modern and postmodern art. We will also carefully explore our relationships with the proliferation of mass media imagery today.

Greek Art and Archaeology
Bulger, Monica K
Fall 2022
The art of the ancient Greeks is the visible testimony of one of the great ages of Western civilization. We will study architecture, sculpture, and painting. This class will consider the art of Minoan, Crete, and Mycenae on the mainland of Greece as precursors to Greek art. Then we will study Greek art proper from its earliest appearance to the end of the Hellenistic period. Archaeological material will be covered primarily in relation to the major artistic monuments.

ARTH431401
The Materials of Art and their Conservation
Newman, Richard
Fall 2022
Preservation of a (traditional) work of art requires understanding the materials of which it is made up, their condition, determining a course of treatment, then carrying out a treatment. In this seminar, means by which the materials of art can be understood (historical documents and examination in a conservation lab) will be explored. A major focus will be on how conservators determine the 'state of preservation' that is the desired outcome of a particular treatment (which is rarely how the work of art looked when it was newly created). Other topics are conservation controversies (including cleaning of the Sistine Chapel), 'authenticity' (and authentication) of works of art, and preservation of art that may include highly perishable materials, digital media, or performance. Although some of the subjects are technical, no background in college science is required.

ARTH431501
Gender and the Body in Chinese Art
Campbell, Aurelia
Fall 2022
This research seminar investigates the ways in which traditional gender roles were defined, shaped, represented, and challenged in Chinese art and architecture from about 1500 to the present. We will begin by examining gendered spaces, both actual and imagined, during the Ming and Qing dynasties. We will then turn our attention to how gender was performed with regard to bodies and labor, love and sexuality, and faith and piety during this time. Finally, we will explore how gender took on new meaning in the visual and material culture of the early twentieth century, the Maoist era, and now within contemporary art. Students will be introduced to critical scholarship in the field and will deepen their knowledge on one aspect of gender and art through an in-depth research project.

Art History Courses: Spring 2023
ARTH110101
Art: Prehistoric to Middle Ages
Bulger, Monica K
Spring 2023
A fundamental course for understanding the visual arts in the Western World: painting, sculpture, and architecture. Major monuments in the history of art will be discussed in historical and cultural context beginning with Paleolithic cave art through the art of the medieval period. This course will examine some of the ancient material from an archaeological perspective, but its main emphasis will be on style and meaning in art. Assignments will include museum visits and the study of significant works of art in Greater Boston.

Credits: 3
Room and Schedule: Devlin Hall 018 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: Arts

ARTH110201
Art: Renaissance to Modern Times
Crowley, Destiny; Wunsch, Oliver M
Spring 2023
This is the fundamental course for understanding the visual arts: painting, sculpture, and architecture. The major monuments in the history of art will be discussed in their historical and cultural context beginning with the Renaissance in Europe down to the art of our own time. The emphasis will be on style, materiality, and meaning in art. The class meets for two slide lectures per week. Assignments will include museum visits and study of significant works of art in Greater Boston.

ARTH220501
Early American Art
Anderson, Asher
Spring 2023
In this course we will look at art and visual culture made in what is now the United States from ancient times to around 1800. We will consider visual material representing diverse experiences, including Native American art before and after contact with Europeans; depictions of early European settlements; and art, architecture, and material culture from the colonial, Revolutionary, and early national periods. Throughout, we will ask what it means to be American both in the past and in our own time. As much as possible, both independently and as a group, we will study works of art in person at the Museum of Fine Arts, Boston, the Peabody Essex Museum, and elsewhere.

Credits: 3

ARTH220601  
Art and Myth in Ancient Greece  
Hoffman, Gail L  
Spring 2023  
An introduction to the visual representation of the Greek gods and goddesses and to the artistic depiction of the primary cycles of Greek legends (e.g., the Trojan War and heroes such as Herakles, Perseus, and Theseus). This course focuses on how specific visual attributes serve to identify mythological characters and how the development of narrative in Greek art helped to relate their stories. Inquiring into the use of mythological imagery to decorate temples, cult statues, and vases used primarily for the symposium (male drinking parties), we will consider the functions of mythological imagery within Greek society.

ARTH221301
Islamic Art and Architecture
Smith, Sharon C
Spring 2023
This course surveys the arts and architecture of the Islamic world. Examples are drawn from religious, secular, and commemorative architecture as well as ceramics, metalwork, woodwork, textiles, and the arts of the book, arranged chronologically and spread geographically. The course examines the form and function of works of art and architecture within their historical, social, craft, and visual contexts, exploring the relationships between people and objects or places within society.

ARTH222101
Early Medieval Art
Marquardt, Janet
Spring 2023
The art of the Early Middle Ages in Europe offers an illustration of the clash and fusion of cultures during a period of migration and resettlement resulting in a new religion and new ruling states. Beginning with the visual arts of the Roman Empire, in this course we will follow the appropriation and transformation of practices, materials, and techniques brought by waves of peoples who crossed Europe from east to west during this period. This course will help you ask questions about why monuments and objects were made, what their purpose was, why their styles, materials, or techniques were chosen, how to recognize the subject, and, ultimately, how this all adds up to meanings that were conveyed to contemporary viewers. Throughout the course, we will also keep in mind that modern reception of medieval art affects how we construct the history of the past.

**ARTH222201**  
**Imagination and Imagery: Later Medieval Art**  
**Staudinger, Evelyn R**  
**Spring 2023**

This course will introduce key art and architecture from the years 1000-1400 in Europe, the so-called Romanesque and Gothic styles of art, a time of great innovation in technology and competition between powerful leaders. These are also the medieval styles that were revived during the nineteenth and early twentieth centuries around the world, linking cultural references to ideals of the past.

**ARTH224101**

**Modern and Contemporary Chinese Art, 1911 to present**

**Campbell, Aurelia**

**Spring 2023**

After the fall of the Qing dynasty in 1911 Chinese artists were confronted with the great challenge of expressing radically new concepts of modernity, national identity, and selfhood in visual terms. By the mid-twentieth century their attention had shifted to the problem of how best to represent the ideologies of the Communist party. Today, contemporary artists and architects respond to new social issues, such as political censorship, environmental destruction, and urban displacement. By covering a wide range of topics—including advertisements of the modern Shanghai woman, Socialist realist sculpture, Mao-era propaganda posters, and the politically-charged works of Ai Weiwei—this course introduces students to this extremely dynamic period in Chinese art history.

**Modern Architecture**  
**Orwig, Timothy T**  
**Spring 2023**  
This course is an overview of the history of architecture in the Modern era, from its eighteenth- and nineteenth-century roots until the present day. Students will examine architecture, urban design, landscape design, and other allied fields such as art history, interior design, and engineering. The course will consider vernacular and commercial design as well as the roles of architects, artists, and patrons. Important issues include the effects of the Industrial Revolution and the rise of the skyscraper, national and international stylistic trends and movements, manufacturers, international exhibitions, and public and critical reaction. Satisfies Core requirement for Arts.

ARTH226701
Saltbox to Skyscraper: American Architecture
Orwig, Timothy T
Spring 2023
This course examines the history of buildings, landscapes, and urban growth in the United States, from early Native American and European contact to the present. Themes studied include typology, materials and technology, style and movements, the emergence of the architectural profession, and specific social contexts such as culture, gender, race, class, and ethnicity. Students will examine how the built environment is linked to climate, geography, and imaginations of the natural world, and influenced by politics, religion, economy, internationalism, and the definition of national and regional identity. Finally, because of the important role of Boston in American architectural history, the course will use Boston as a lens to understand American architectural history. Satisfies Core requirement for Arts.

ARTH232401
A History of Color
Wunsch, Oliver M
Spring 2023
Color is a fact of nature, but its making and meaning have changed dramatically over time. In this course, we will track the history of color over a five-hundred-year period, from the Renaissance to the present. Though we will focus on Europe and America, one of the recurring themes of the course will be the inseparability of color from globalization, colonialism, and imperialism. Artists such as Titian, Monet, Van Gogh, Amy Sillman, and Anish Kapoor will serve as our points of entry into this history, and we will situate their work within the scientific, philosophical, and social contexts that gave their use of color its meaning. Along the way, we will consider how entrepreneurs and politicians have exploited color for their own purposes, from the commodification of proprietary pigments to the weaponization of color as an instrument of racial prejudice. Lectures will alternate between thematic overviews of major topics in color history and in-depth case studies of specific colors. In-class projects will incorporate hands-on exploration of color through pigment grinding exercises and optical experiments. Writing projects will force us to consider how color resists linguistic description, opening a broader conversation about the relationship between visual and verbal communication.

ARTH334201
Age of Rembrandt
Golahny, Amy
Spring 2023
In the seventeenth century the prosperous Dutch middle class became passionate art collectors. Wealthy merchants and tradesmen, and even butchers and bakers, bought art of the highest quality and displayed it proudly in their homes and shops. The artists living in the Netherlands responded by producing wonderful genre pictures, landscapes, still lifes and portraits as well as religious and mythological pictures for this, the first free market in the history of art. Among the artists we will study are Rembrandt, Jan Vermeer, Frans Hals.

**ARTH334701**  
**Age of Baroque: Seventeen Century Art in Italy**  
**Leone, Stephanie**  
**Spring 2023**  
This course will study the painting, sculpture, architecture, and urban development of Italy during the late sixteenth and seventeenth century. We will focus on the abundant artistic projects in Rome, the home to the papacy and the birthplace of the Baroque. Particular emphasis will be placed on the relationship between artistic endeavors and powerful patrons, many of whom were members of the Roman Catholic Church. We will investigate the meanings and uses of art in relation to its social and cultural contexts to understand how art served both sacred and secular goals.

ARTH334901
Memory Work: Art and Mourning, 1945-Present
Lottery, Kevin
Spring 2023
This introductory course examines the relationship between the work of art and the work of mourning and memory, with a focus on art made after 1945 in a global context. By considering works that address historical traumas and their resonance in the present, we will consider enduring dilemmas surrounding the aesthetics, ethics, and politics of art that undertakes memory work. For help, we will look to a disparate group of artists, filmmakers, and other types of image makers in order to analyze arts responsibilities in the face of profound suffering. In a present of perpetual global war and a corresponding hypervisualization of state-sanctioned violence, what types of spaces are available for conducting memory work today? No prerequisites required.

ARTH336201
Photography and Modernism
Anderson, Asher
Spring 2023
After decades of constant change in photography's use and technology, at the turn of the twentieth century photographers began exploring the defining conditions of their quintessentially modern medium. Photography came into its own in the years that followed, as it became a primary medium of mass-communication and solidified its place among the fine arts. This course will trace the intertwined iterations of modernism in photography, focusing on European and American art movements. We will look at photographers including Alexander Rodchenko, László Moholy-Nagy, Alfred Stieglitz, Imogen Cunningham, Edward Weston, and Ansel Adams, and read both theoretical texts and artists' own writing about photography.

ARTH440201
Art and Architecture of the Forbidden City
Campbell, Aurelia
Spring 2023
The Forbidden City palace in Beijing constituted the center of Chinese imperial power from the year 1420, when it was constructed, until the early twentieth century. Now home to the Palace Museum, the Forbidden City attracts millions of tourists annually. In addition to examining the Forbidden City's magnificent halls, temples, gardens, and art objects, produced exclusively for the members of the Ming and Qing imperial courts, students in this course will discuss the shifting roles of the Forbidden City--as a monument, a symbolic form, a social space, a political entity, and a center of cultural production--over a period of approximately six centuries, including the Mao and post-Mao eras.

ARTH444401
Contested Monuments from the French Revolution to the Present
Wunsch, Oliver M
Spring 2023
Is it possible to separate the political message of a monument from its artistic or historic value? What should be done with statues that glorify racism and injustice? Recent debates over Confederate monuments across the United States have made these questions impossible to ignore. This seminar approaches these debates from a historical perspective, examining case studies from the late eighteenth century to the present. The course begins with the French Revolution, when the term "vandalism" acquired its modern meaning, and when new notions of "cultural heritage" were developed in response. We then move on to the American Civil War, examining how its memorialization in sculpture varied across time and place. Subsequent case studies will include settler monuments in the American West, fascist monuments in Europe, and post-apartheid monuments in South Africa. For final projects, each student will write a position paper on a monument of their choice, using historical and visual evidence to justify a plan for the monument's future.

BIOL710101
Readings and Research
Hoffman, Charles
Summer 2022
Intended for M.S. students who are acquiring a knowledge of the literature and experimental methods associated with their research projects under the guidance of a faculty research advisor. Participation in research group meetings, journal clubs, data clubs, etc., may be required. A maximum of six credits may be earned from this course.

Credits: 3
Room and Schedule: By Arrangement

BIOL806001
Departmental Seminar
Johnson, Welkin E
Summer 2022
This is a series of research seminars conducted by leading scientists, both from within the department and from other institutions, that are presented on a regular (usually weekly) basis.

Credits: 0
Room and Schedule: Th 03:00PM-05:00PM
Satisfies Core Requirement: None
Prerequisites: Permission of Department
Corequisites: None
Cross-listed with: None
Frequency: Every Spring
Student Level: Graduate
Comments: None
Status: Offered
All students who have been admitted to candidacy for the Ph.D. degree are required to register and to pay the fee for doctoral continuation during each semester of their candidacy. Doctoral Continuation requires a commitment of at least 20 hours per week working on the dissertation.

**Credits:** 0  
**Room and Schedule:** By Arrangement

BIOL110001
General Biology
Annunziato, Anthony T, Phd; Seyfried, Thomas N, Phd
Fall 2022
Designed for non-science majors who desire an introduction to cell and molecular biology, this course is also suggested for students who may be interested in the Biology major but lack sufficient preparation to enroll directly into BIOL 2000. Topics include the chemistry of life; biological membranes; cellular metabolism; cell structure; cell division; DNA replication/RNA transcription; protein synthesis; genetics/evolution. Lectures include discussions of the scientific method and current applications of biological investigations. Note: this course does not fulfill any requirement for the biology major, biochemistry major, or the pre-medical program.

Credits: 3
Room and Schedule: Higgins Hall 300 MWF 11:00AM-11:50AM
Satisfies Core Requirement: Natural Science
Prerequisites: None
Corequisites: None
Cross-listed with: None
BIOL121001
Teaching the Biosphere

BIOL130001
Anatomy and Physiology 1
Mott, Devin
Fall 2022
This course lays the foundation for the understanding of human anatomy and physiology. The first portion of the course covers cellular and molecular aspects of eukaryotic cell function: basic chemistry, macromolecules, cell structure, membrane transport, metabolism, gene expression, cell cycle control, and genetics. The course continues with the study of several organ systems. Beginning with the Integument, which is followed by the Skeletal and Muscular Systems, and ending this first semester with the Nervous System. The cellular and molecular basis for the functions of these systems is an integral element of this portion of the course.

Credits: 3
Room and Schedule: 245 Beacon Street Room 107 TuTh 04:30PM-05:45PM
Satisfies Core Requirement: None
BIOL130002
Anatomy and Physiology 1
Mott, Devin

BIOL148001
Pathogens and Plagues
Dunn, Mary K
Fall 2022
In recent history, never has microbiology been more upfront and more important. As we continue to navigate through the Covid-19 pandemic, it is increasingly important to better understand not only viruses and vaccines, but a broader view of microbes and their impact on society and public health. This course will look at ancient epidemics such as the Plague and TB, the ongoing HIV epidemic and the more recent spillovers leading to outbreaks of Ebola and the current pandemic with Sars2 (Covid-19). In addition to lectures on the biological aspects of microbes and epidemics, classroom discussion will include topics such as rising antibiotic resistance, the anti-vax culture and the intersection of science and politics. This is a discussion-based course and students will participate in a semester-long group research project to be presented to the class. This course satisfies the Natural Science Core and is designed for non-biology majors.

Credits: 3

BIOL200001
Molecules and Cells
Warner, Douglas M
Fall 2022
Foundational course required for Biology majors that introduces students to living systems at the molecular and cellular level of organization. Topics introduced in this course include basic cellular biochemistry, gene regulation, cellular organization and metabolism, and cell signaling and genetics.

**Credits:** 3

**Room and Schedule:** Merkert Chemistry Center 127 TuTh 01:30PM-02:45PM

**Satisfies Core Requirement:** Natural Science

**Prerequisites:** CHEM1109 may be taken concurrently or equivalent or permission of the department.

**Corequisites:** None

**Cross-listed with:** None

BIOL204001
Investigations in Molecular Cell Biology Lab
Warner, Douglas M
Fall 2022
A 3-credit laboratory course designed to introduce students to the core techniques and experimental strategies of modern molecular cell biology within the context of an original research investigation. Students will learn to construct testable hypotheses, design experiments, and critically analyze experimental results. During the course of their investigations, students will gain proficiency in microbial cell culture, molecular cloning, genetic analysis, and molecular characterization. Students will also gain proficiency in scientific communication and the use of biological databases.

A 3-credit laboratory course designed to introduce students to the core techniques and experimental strategies of modern molecular cell biology within the context of an original research investigation. Students will learn to construct testable hypotheses, design experiments, and critically analyze experimental results. During the course of their investigations, students will gain proficiency in microbial cell culture, molecular cloning, genetic analysis, and molecular characterization. Students will also gain proficiency in scientific communication and the use of biological databases.

**Credits:** 0  
**Room and Schedule:** Higgins Hall 380 MW 05:30PM-07:30PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** None

BIOL220001
Microbiology for Health Professionals
Eberhard, Jeremy J
Fall 2022
This course is a study of the basic physiological and biochemical activities of bacteria and viruses. Emphasis will be placed on virulence factors and the mechanism by which a variety of microorganisms and viruses establish an infection. The use of anti-viral drugs and antibiotics, the host immune response to microbial infection, and the effectiveness of various vaccination strategies will also be discussed.

Credits: 3
Room and Schedule: Higgins Hall 310 MWF 01:00PM-01:50PM
Satisfies Core Requirement: None
Prerequisites: BIOL1300 or BIOL1300-1320
Corequisites: None

This course will introduce biology students to the basic statistical techniques that are used in conducting biological and medical research. The course is divided into four parts: (1) descriptive statistics (averages, variability); (2) probability and probability distributions (basic probability theory and the binomial, poison, and normal distributions); (3) statistical inference (parametric and non-parametric tests); and (4) relationships between variables (simple and multiple regression). Students will become familiar with a standard statistical analysis software package and will critique actual research papers.

**Credits:** 3

**BIOL303001**

**Introduction to Physiology**

**Kenaley, Christopher P**

**Fall 2022**

This course is intended for Biology, Psychology, and Biochemistry majors and students in the pre-medical program seeking a broad overview of human physiology. This course will offer a comprehensive exploration of fundamental life systems with a primary emphasis on human physiology. The chemical and physical processes common to all living organisms, including hemodynamics, respiration, circulation, acid/base regulation, synaptic transmission, kidney and muscle function will be discussed. Also included are related topics on development of the organism and functional aspects of the immune system in host defense strategies.

**Credits:** 3

**Room and Schedule:** Devlin Hall 8 MWF 01:00PM-01:50PM

**Satisfies Core Requirement:** None

**Prerequisites:** BIOL2000

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Every Fall, Every Spring
BIOL304001
Cell Biology
Burgess, David R
Fall 2022
This course is designed to provide students with a strong foundation in the molecular biology of the cell. Topics covered in the course include cellular biochemistry, regulation of gene expression, subcellular organization, regulation of the cell cycle, membrane trafficking, cell-substrate interactions, cytoskeleton, cancer, and cell signaling. It serves as excellent preparation for more advanced courses in cell biology, molecular biology, developmental biology, and genetics.

Credits: 3
Room and Schedule: Higgins Hall 300 TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
Prerequisites: BIOL2000

BIOL314001  
Experimental Methods in Organismal Biology  
Kenaley, Christopher P
Organismal biology is the study of living systems of all scales that shape the structure, function, ecology, and evolution of individual organisms. Experiments that elucidate how organisms respond to biotic and abiotic environmental stimulus over broad time scales--from changes in behavior to adaptation--are crucial to understanding biological diversity. In this course we'll explore the concepts and analytical tools that frame experimental research in organismal biology. Through group projects and active learning exercises, students will first make hypotheses concerning how organisms respond in time, space, and behavior to changes in environment and then design experiments and instruments that produce data to evaluate these hypotheses. Topics covered will include reconstructing phylogenetic history and the evolution of organismal form and function, evaluating form-function relationships, and the correlates of spatial and temporal distribution of organisms. In addition, the development of an analytical toolbox--specifically, learning the principles of data science and statistical analysis--is a central theme of this course.

**Credits:** 3

**Room and Schedule:** Higgins Hall 310 MWF 10:00AM-10:50AM

**Satisfies Core Requirement:** None

**Prerequisites:** BIOL3030. Intro to Physiology is recommended

---

**BIOL407501**

**Research in Molecular Phylogenetics**

**DaCosta, Jeffrey M**

**Fall 2022**
A phylogenetic tree is a diagram that depicts the relationships among a set of taxa or genes, and is a critical tool for many analyses of evolutionary history. This course covers the basic methods of phylogenetic inference from DNA sequence data, including data collection, alignment, and tree building using parsimony, distance, likelihood, and Bayesian techniques. Lectures will introduce the logical basis of these methods, and computational labs will give students hands-on experience with these methods using a variety of phylogenetic software packages.

BIOL409001
Virology
Eberhard, Jeremy J
Fall 2022
This course will consider eukaryotic DNA and RNA viruses that are important in human disease. Basic principles of virus structure, host cell entry and the molecular biology of virus life cycles will be considered in the context of infectious disease. Viruses to be examined include Influenza, cancer-related viruses such as the Human Papilloma Virus, HIV, and emerging viruses such as Ebola and the hantaviruses. The host immune response to viral infection and the effectiveness of various vaccination strategies will also be discussed.

BIOL414001
Microbiology
Momeni, Babak
Fall 2022
This course provides a foundation in molecular cell biology for biology majors, focusing on bacteria, viruses, immunology, and host/microbe relationships. Bacterial structure and function are addressed in terms of physiology, genetics, and biochemistry. Gene expression, replication, and transmission are examined in a variety of eukaryotic viruses. A review of the innate and adaptive phases of the immune response is presented with an emphasis on pathogen recognition, cellular communication, and lymphocyte development. The course concludes with selected topics on pathogenesis, epidemiology, and microbial ecology.

Credits: 3
Room and Schedule: Higgins Hall 310 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: None
Prerequisites: BIOL2000; BIOL2040 is recommended and can be taken concurrently.
Corequisites: None
BIOL420002
Introduction to Bioinformatics
Clote, Peter G
Fall 2022
Bioinformatics is an emerging field at the intersection of biology, mathematics, and computer science. It harnesses the power and speed of computers to analyze the molecules essential for life. This introductory course requires that students have a basic understanding of molecular biology, genetics, and the Internet, but it does not require extensive background in mathematics or programming. Students will learn bioinformatic tools from the public domain, public databases, and simple programming tasks in PYTHON.

BIOL426001
Human Anatomy
DiBenedetto, Lynn M
Fall 2022
In this course, students will explore and compare the form and function of representative members of the five vertebrate classes. Evolutionary similarities and differences in form and function will be investigated, as will both the selective pressures, and non-selective constraints that have contributed to vertebrate structure. The course will conceptually integrate vertebrate anatomy with developmental biology, evolutionary biology, and ecology, and will provide skills valuable to careers in a range of biological disciplines, including molecular cell biology, medicine, evolutionary biology, and ecology.

**BIOL432001**  
**Developmental Biology**  
**Hake, Laura E**  
**Fall 2022**  

Developmental biology is in the midst of a far-reaching revolution that profoundly affects many related disciplines, including evolutionary biology, morphology, and genetics. The new tools and strategies of molecular biology have begun to link genetics and embryology and to reveal an incredible picture of how cells, tissues, and organisms differentiate and develop. This course describes both organismal and molecular approaches, which lead to a detailed understanding of (1) how it is that cells containing the same genetic complement can reproducibly develop into drastically different tissues and organs, and (2) the basis and role of pattern information in this process.

**Credits:** 3

*Research in Molecular Biology Lab*  
Fofana, Ismael B  

**Fall 2022**  
Satisfies the advanced experience requirement for the Biology major. An advanced project laboratory course for hands-on training in the experimental techniques of molecular biology under faculty supervision. In addition to formal lab training and discussions, students will have access to the lab outside class hours to work on projects intended to produce publication quality data. The research project will focus on environmentally-mediated gene expression in the organism Pseudomonas fluorescens. Methods taught include: DNA cloning techniques, DNA sequencing, polymerase chain reaction, and the use national databases for research and analysis. It is ideal for students who desire a solid introduction to hypothesis-driven research in molecular biology through practical training.

*Investigations in Cellular Re-Programming*  
Connolly, Timothy J
Induced pluripotent stem cells, iPSCs, are cells that can be generated from adult cells such as skin fibroblasts. Once generated, iPSCs can be directed to differentiate into any cell and offer exciting models for disease research. This laboratory course will teach students the techniques used to reprogram adult murine fibroblasts into pluripotent stem cells and their subsequent differentiation into cardiac and neuronal lineages. Resulting cell lines will be characterized using molecular and cell biology techniques and students will work to create novel cellular disease models to progress particular disease research.

BIOL501001
Nobel Prize Winning Research in Medicine or Physiology
Burgess, David R
Fall 2022
In this course we will discuss primary research literature in the fields of cell and developmental biology that have led to the award of the Nobel Prize. Each student will select a primary paper cited by the Nobel Foundation as justification for the award together with a supportive current review on the topic and present the background information to the class. The primary paper will be discussed at the following class period, with all students having defined responsibilities for discussion of the figures and data.

**Credits:** 2  
**Room and Schedule:** Stokes Hall 105S M 03:00PM-04:50PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL3040 or related course work in molecular cell biology  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Annually  
**Student Level:** Undergraduate  
**Comments:** None  
**Status:** Offered

---

**BIOL507101**  
**Microbial Community Ecology**  
**Momeni, Babak**  
**Fall 2022**  
Polymicrobial communities can cause harmful infections as pathogens or facilitate food digestion as resident microbiota. They also have industrial applications for waste remediation or biofuel production. We will examine examples of microbial communities with implications in health, environment, or industry. The course surveys relevant ecological theories and covers current tools and methodologies used for characterization and analysis of microbial communities.

**Credits:** 2  
**Room and Schedule:** Higgins Hall 465 W 01:00PM-02:50PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL 2010 and 2014; BIOL 414 and a statistics course recommended.  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Spring  
**Student Level:** Both
BIOL507501
Emerging Therapeutics
Nystuen, Arne M
Fall 2022
This course will focus on novel therapeutic technologies. The first gene therapy has been approved in the U.S. following decades of development. Furthermore, many more gene and cell therapies are in development. The process of therapeutic development will be covered. New technologies will be discussed as well as the results of preclinical and clinical trials. Topics will be presented by the instructor and students and discussions will follow. Students will select their topics for presentation with direction and final approval from the instructor. We will develop presentation skills throughout the course.

Credits: 2
Room and Schedule: Higgins Hall 465 M 04:30PM-06:30PM
Satisfies Core Requirement: None
Prerequisites: BIOL2000 and additional course work in molecular cell biology. Biochemistry and Physiology recommended.
Corequisites: None
Cross-listed with: None
Frequency: Every Fall
Student Level: Both
Comments: None
Status: Offered

BIOL509501
Topics in Advanced Cell Biology
Rappoport, Joshua
Fall 2022
Through the analysis of classical and cutting-edge primary research papers and review articles this course will highlight significant advances in cell biology. The course will include lectures that will provide detailed and nuanced understanding of particularly relevant areas in cell biology, as well as student led presentations and critical analyses of individual research papers. Topics to be discussed include the following: The Secretory Pathway, Endocytosis and the Endocytic Pathway, Cell Adhesion, Cell Migration, Signal Transduction, The Cytoskeleton, The Nuclear Pore Complex, and the Cell Cycle. The course will also highlight important technologies and methodologies responsible for advances in cell biology, as well as how developments in cell biology have led to breakthroughs in areas ranging from biotechnology to medicine.

**Credits:** 2  
**Room and Schedule:** Higgins Hall 465 W 04:30PM-06:20PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** None

**Frequency:** Annually  
**Student Level:** Both  
**Comments:** None  
**Status:** Offered

---

**BIOL513001**  
**Environmental Disruptors of Development**  
**Hake, Laura E**  
**Fall 2022**  
Satisfies the advanced experience requirement for the Biology major. More than 100,000 chemicals are manufactured and may end up as environmental pollutants. Some have toxic effects at high concentrations and protection plans are already in place. However, embryonic, fetal or neonatal exposure to low "safe" levels of numerous pollutants can (1) induce subtle changes in developmental programs regulated by steroid hormones; (2) increase the reproductive, immune, metabolic or cognitive disorders and (3) increase the risk of adult-onset disorders (breast cancer, prostrate cancer, diabetes, reduced fertility). This course will examine experiments regarding Environmental Endocrine Disruptors and consider how this work is important in the development of regulatory policy.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 225 TuTh 10:30AM-11:45AM  
**Satisfies Core Requirement:** None
Prerequisites: At least two of the following courses: BIOL3040, BIOL5060, BIOL4170, BIOL4510, BIOL4140, BIOL4350, BIOL4400.

Corequisites: None

BIOL542001
Cancer As A Metabolic Disease
Seyfried, Thomas N, Phd
Fall 2022
Satisfies the advanced experience requirement for the Biology major. This seminar will review evidence showing that impaired cellular energy metabolism is the defining characteristic of nearly all cancers regardless of cellular or tissue origin. In contrast to normal cells, which derive most of their usable energy from oxidative phosphorylation, nearly all cancer cells become dependent on non-oxidative substrate level phosphorylations to meet energy demands. Evidence will be discussed supporting a general hypothesis that all hallmarks of cancer including genomic instability and metastasis can be linked to impaired mitochondrial function. A view of cancer as a metabolic disease will impact approaches to cancer management and prevention.

Credits: 3

Room and Schedule: Higgins Hall 465 TuTh 09:00AM-10:15AM

Satisfies Core Requirement: None

Prerequisites: BIOL2040 and BIOL3040

BIOL545001
Advanced Lab in Cell Imaging
Judson, Bret
Fall 2022
This course satisfies the advanced experience requirement for biology majors. This course will survey the various visualization techniques and instruments used by scientists and biomedical researchers: light microscopy, confocal, electron microscopy, super-resolution, and image processing. Students will discuss the experimental use of these techniques and instruments as described in the primary literature. The laboratory component will focus on becoming familiar with the instrumentation that we have available at Boston College. The course will culminate in individual projects of the students choosing utilizing equipment that we have in the laboratory.

**Credits:** 2  
**Room and Schedule:** Higgins Hall 552 TuTh 04:00PM-06:00PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040 and additional coursework in cell and/or molecular biology.  
**Corequisites:** None

---

**BIOL570001**  
**Biology of the Nucleus**  
**Annunziato, Anthony T, Phd**  
**Fall 2022**  
Satisfies the advanced experience requirement for the Biology major. This course provides an in-depth treatment of the molecular biology of DNA and RNA, with particular emphasis on the control and organization of the genetic material of eukaryotic organisms. Topics include chromatin structure and function, histone modifications, DNA replication, gene activation and silencing, DNA methylation, and RNA interference. Emphasis is on experimental design, and analysis of the primary literature.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 465 TuTh 01:30PM-02:45PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** CHEM4461 or CHEM4462 or BIOL4400 or BIOL4350 or CHEM4461 or BIOL4350 or BIOL4400  
**Corequisites:** None

BIOL701001
Graduate Research Experience I
Hoffman, Charles
Fall 2022
This seven-week research experience is designed to provide first year students with both technical and intellectual preparation to work in a faculty member's laboratory. Projects are assigned by the faculty advisor. To help develop communication skills, at the end of the seven week period, students give a 10-12 minute talk to the department describing their research.

BIOL801001
Thesis Seminar
Johnson, Welkin E
Fall 2022
A research problem of an original nature will be addressed. This course is designed for M.S. candidates under the direction of a faculty member. A maximum of six credits may be earned from this course.

Credits: 3
Room and Schedule: BY ARRANGEMENT
BIOL805001
Departmental Seminar
Johnson, Welkin E
Fall 2022
This is a series of research seminars conducted by leading scientists, both from within the department and from other institutions, that are presented on a regular (usually weekly) basis.

Credits: 1
Room and Schedule: Higgins Hall 310 TuTh 03:00PM-04:50PM

BIOL888001
Interim Study
Hoffman, Charles; Meyer, Michelle M
Fall 2022
Required for Master's candidates who have completed all course requirements but have not taken comprehensive examinations. Also for Master's students (only) who have taken up to six credits of Thesis Seminar, but have not yet finished writing their thesis.

Credits: 0
Room and Schedule: BY ARRANGEMENT
BIOL990101
Doctoral Comprehensive
Meyer, Michelle M
Fall 2022

BIOL144001
Sustaining the Biosphere
Hake, Laura E
Spring 2023
Environmental problems and their solutions occur at the intersection of natural systems and the human systems that manipulate the natural world. The course will provide students with an integrated understanding of human systems that affect nature. Topics will include climate, air and water pollution, economics and urbanization, food and agriculture, population growth, biodiversity, waste management and health and toxicology. Sustainability, personal responsibility and a proactive approach to involvement in solutions to current environmental crises will be emphasized. This course is designed for students who are not majoring in biology or biochemistry.

**Spring 2023**

Environmental problems and their solutions occur at the intersection of natural systems and the human systems that manipulate the natural world. The course will provide students with an integrated understanding of human systems that affect nature. Topics will include climate, air and water pollution, economics and urbanization, food and agriculture, population growth, biodiversity, waste management and health and toxicology. Sustainability, personal responsibility and a proactive approach to involvement in solutions to current environmental crises will be emphasized. This course is designed for students who are not majoring in biology or biochemistry.

**Credits:** 0  
**Room and Schedule:** Higgins Hall 280 F 01:00PM-01:50PM  
**Satisfies Core Requirement:** Natural Science  
**Prerequisites:** None  
**Corequisites:** None

BIOL170601
Understanding and Protecting Our Oceans in the Wake of Global Change
Humphries, Courtney; Offen, Vena; Olins, Heather C
Spring 2023
This is a Complex Problems course and is open to FRESHMEN only. You must also sign up for the accompanying lab BIOL1707 or ENVS1076. The ocean, which covers more than 70 percent of the Earth's surface, is vital to human societies. Yet, we have better maps of Mars than our own seafloor. This course introduces students to what we know and don't know about marine biodiversity and ecosystem services. It then describes the effects of climate change on the ocean--including rising temperatures, acidification, and sea level rise--and the resulting impact on life within and outside of the ocean. We end discussing the importance of effective governance and explore innovative ways in which people are working to repair and protect the ocean.

**Credits:** 3

**Room and Schedule:** 245 Beacon Street Room 102 TuTh 10:30AM-11:45AM

BIOL204001
Investigations in Molecular Cell Biology Lab
Warner, Douglas M
Spring 2023
A 3-credit laboratory course designed to introduce students to the core techniques and experimental strategies of modern molecular cell biology within the context of an original research investigation. Students will learn to construct testable hypotheses, design experiments, and critically analyze experimental results. During the course of their investigations, students will gain proficiency in microbial cell culture, molecular cloning, genetic analysis, and molecular characterization. Students will also gain proficiency in scientific communication and the use of biological databases.

BIOL304001
Cell Biology
Folker, Eric S
Spring 2023
This course is designed to provide students with a strong foundation in the molecular biology of the cell. Topics covered in the course include cellular biochemistry, regulation of gene expression, subcellular organization, regulation of the cell cycle, membrane trafficking, cell-substrate interactions, cytoskeleton, cancer, and cell signaling. It serves as excellent preparation for more advanced courses in cell biology, molecular biology, developmental biology, and genetics.

Credits: 3

BIOL309001
Foundations of Microbiology
Eberhard, Jeremy J
Spring 2023
In this course we examine the diversity in the microbial world that exists between bacteria, archaea, eukarya, and viruses. We will explore the unique molecular biology, metabolism, and ecological diversity that exists within the three domains of life and, ultimately, discuss how various aspects and members of the microbial world intersect with humanity and human health.

Deep Sea Biology
Olins, Heather C
Spring 2023

Roughly 80% of habitable space on this planet is in the ocean below 1000 meters where sunlight never reaches. In this course we will dive into this rarely visited habitat that occupies the majority of our biosphere. We will take an interdisciplinary approach, as studying the deep requires the integration of geology, chemistry, ecology, physiology, and engineering. We will investigate fundamental aspects of biology such as how organisms adapt to challenges posed by their environment. Students will also gain an appreciation for how much of the planet remains unexplored and learn how scientists study the inaccessible ecosystems of the deep.

Population Genetics
Clote, Peter G
Spring 2023
In molecular evolution, random events such as pointwise DNA mutations and chromosomal rearrangement events (inversion, reciprocal translocation) create genetic variation in a diploid population that undergoes selection of the fittest to survive. This course describes mathematical models, both deterministic and stochastic, that provide a theoretical foundation for understanding modern genetics. The types of questions we'll address include the following. In a large population, how do haplogype frequencies change both in the presence and absence of selection and restricted migration? What is linkage disequilibrium and how is it measured? In situations of a population bottleneck, caused for instance by limited environmental resources, what is the probability that a particular allele will become fixed in the population, and what is the expected time until fixation? What is the coalescent? In addition, some original research papers will be presented.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 310 TuTh 12:00 Noon-01:15PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL 3050 OR 3150. Working knowledge of probability and statistics or approval from the instructor.

**Cross-listed with:** None  
**Frequency:** Annually  
**Student Level:** Undergraduate  
**Comments:** None  
**Status:** Offered
The increasing knowledge about the metabolic pathways has deepened our understanding of human disease. Using studies from recent research and review articles, we will cover a variety of domains in the first half of the semester. These topics include insulin signaling/resistance, regulation of metabolism by different regulatory pathways and endoplasmic reticulum stress. We will also investigate important regulatory hormones including incretins, leptin and adiponectin and the tissue at the center of obesity, adipose tissue. Based on this foundation, we will focus on metabolic impairments in different human diseases. Specifically, we will be reading from the primary literature and from other relevant sources (e.g., review articles) on metabolic syndrome, pancreas function/dysfunction, type 2 diabetes, type 1 diabetes, gestational diabetes, MODY and obesity. After we complete this section, we will focus on the link between metabolic diseases and other important diseases including cancer and neurological diseases/dysfunction. Lastly, we will study the effects of racism and inequities in society on human health. At the end of the course, the students will develop a deep understanding of basic mechanisms in metabolic disease. This course is based on active teaching/learning principles and the instructor will be the guide on the side, rather than sage on the stage. Thus, the students are expected to actively participate in Discussions in each class.

**Credits:** 3

**Room and Schedule:** Higgins Hall 310 TuTh 09:00AM-10:15AM

BIOL435001
Biological Chemistry
Meyer, Michelle M
Spring 2023
This course is designed to introduce biology and biochemistry majors to the subject with an emphasis on understanding the biochemical principals that are crucial to biological function at the molecular, cellular, and organismal levels. The material includes: (1) the structure and chemistry of biomolecules, including amino acids, proteins, lipids, carbohydrates, and nucleic acids; (2) the key metabolic pathways and enzymology involved in the synthesis/degradation of carbohydrates; and (3) the cycling of energy through biological systems. Reference will be made to alterations in biochemical structures, processes, and pathways that relate to specific diseases.

Credits: 3
Room and Schedule: Mcguinn Hall 121 MWF 10:00AM-10:50AM
Satisfies Core Requirement: None
Prerequisites: CHEM2231 and BIOL2000
Corequisites: None
BIOL440001
Molecular Biology
Annunziato, Anthony T, Phd
Spring 2023
This course will explore the structure, function, synthesis and interaction of nucleic acids and proteins. The mechanisms involved in maintaining cellular genetic and epigenetic information, and in reading this "code" to generate specific patterns of gene expression, will be studied in detail. Topics include classic and newly-developed techniques for studying macromolecules; biotechnology; the functional organization of chromosomes; protein folding and modifications; DNA replication, repair and supercoiling; RNA synthesis and processing; translation and the levels of gene regulation. Literature from the foundational investigations that led to our understanding of these processes and the current research in these areas will be presented.

BIOL445001
Behavioral Ecology
DaCosta, Jeffrey M
Spring 2023
This course will examine the adaptive significance of behavior in an ecological context. Lectures and readings from the primary literature will review basic concepts and theory as well as model-based and experimental approaches to exploring questions in the field. Topics covered includes social behavior, reproductive behavior, life history strategies, optimal foraging, territoriality, co-evolution, and communication.

---

**BIOL450001**  
**Investigations in Biological Research**  
**McMenamin, Sarah K**  
**Spring 2023**  
This course will explore the process by which scientific knowledge is actually generated. Students will be introduced to reading and interpreting primary literature, the primary mechanism of scientific communication. We will spend time inside of a working biological laboratory, learning the dynamics of a research culture and participating in lab meetings. We will specifically investigate research with the zebrafish model organism, asking how endocrine factors influence skeletal development and patterning. Class discussions will focus on the peer review process, funding for basic science and the human aspects of biological research.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 465 TuTh 10:30AM-11:45AM  
**Satisfies Core Requirement:** None

BIOL451001
Cancer Biology
Taghian, Danielle
Spring 2023
The onset of cancer occurs through a multi-step process that is accompanied by the
deregulation of fundamental cellular processes, including cell cycle control, apoptosis and
angiogenesis. This course will provide an overview of the molecular and cellular changes
associated with these processes and with the initiation, progression and metastasis of tumors.
Topics covered will include tumorigenesis, tumor viruses, oncogenes, tumor suppressor genes,
genomic instability and the current treatments for cancer. The class will draw on textbook and
primary literature readings to enrich the current view of this complex disease.

Credits: 3
Room and Schedule: Higgins Hall 300 MWF 12:00 Noon-12:50PM

BIOL454001
Neuroscience
Nystuen, Arne M
Spring 2023
This class will cover molecular neuroscience and neuroanatomy in a clinical and pharmaceutical context. Anatomy topics will include the structure, function, and pathology for the brain and associated nerves and vasculature. Sensory and motor systems will be discussed with special attention to the visual system, where genetic disease and current therapeutic strategies will be discussed in depth. We will cover pathology associated with neurodegenerative disease and the current clinical trials within this disease group.

**Credits:** 3

**BIOL483001**  
**Research in Molecular Biology Lab**  
**Fofana, Ismael B**  
**Spring 2023**  
Satisfies the advanced experience requirement for the Biology major. An advanced project laboratory course for hands-on training in the experimental techniques of molecular biology under faculty supervision. In addition to formal lab training and discussions, students will have access to the lab outside class hours to work on projects intended to produce publication quality data. The research project will focus on environmentally-mediated gene expression in the organism Pseudomonas fluorescens. Methods taught include: DNA cloning techniques, DNA sequencing, polymerase chain reaction, and the use national databases for research and analysis. It is ideal for students who desire a solid introduction to hypothesis-driven research in molecular biology through practical training.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 570 TuTh 02:00PM-05:00PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040  
**Corequisites:** None  
**Cross-listed with:** None
BIOL487001
Research in Molecular Genetics Lab
Hoffman, Charles
Spring 2023
Satisfies the advanced experience requirement for the Biology major. The fission yeast Schizosaccharomyces pombe is an important model organism for the study of intracellular processes such as cell cycle control, transcription, DNA replication, chromosome maintenance, and signal transduction. This laboratory will involve original molecular genetic research using S. pombe that involves concepts related to forward genetics and gene manipulation. This course is recommended for students interested in pursuing graduate studies or careers in biomedical research.

BIOL501001
Nobel Prize Winning Research in Medicine or Physiology
Burgess, David R
Spring 2023
In this course we will discuss primary research literature in the fields of cell and developmental biology that have led to the award of the Nobel Prize. Each student will select a primary paper cited by the Nobel Foundation as justification for the award together with a supportive current review on the topic and present the background information to the class. The primary paper will be discussed at the following class period, with all students having defined responsibilities for discussion of the figures and data.

**Credits:** 2  
**Room and Schedule:** Stokes Hall 103S M 03:00PM-04:50PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL3040 or related course work in molecular cell biology  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Annually  
**Student Level:** Both  
**Comments:** None  
**Status:** Offered

---

**BIOL506001**  
**Recombinant DNA Technology**  
**Hoffman, Charles**  
**Spring 2023**  
This course will describe the theory and practice of recombinant DNA technology and its application within molecular biology research. Topics will include the cloning of genes from various organisms, plasmid construction, transcriptional and translational gene fusions, nucleic acid probes, site-directed mutagenesis, polymerase chain reaction, and transgenic animals. The goal of the course is to make the research-oriented student aware of the wealth of experimental approaches available through this technology.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 310 TuTh 10:30AM-11:45AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040 and additional coursework in molecular cell biology (such as BIOL3040, BIOL4140, or BIOL4400) or genetics (BIOL3150, BIOL3190, or BIOL4170).  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Spring  
**Student Level:** Both
BIOL507501
Emerging Therapeutics
Nystuen, Arne M
Spring 2023
This course will focus on novel therapeutic technologies. The first gene therapy has been approved in the U.S. following decades of development. Furthermore, many more gene and cell therapies are in development. The process of therapeutic development will be covered. New technologies will be discussed as well as the results of preclinical and clinical trials. Topics will be presented by the instructor and students and discussions will follow. Students will select their topics for presentation with direction and final approval from the instructor. We will develop presentation skills throughout the course.

Credits: 2
Room and Schedule: Higgins Hall 465 M 04:30PM-06:30PM
Satisfies Core Requirement: None
Prerequisites: BIOL2000 and additional course work in molecular cell biology. Biochemistry and Physiology recommended.
Corequisites: None
Cross-listed with: None
Frequency: Every Fall
Student Level: Both
Comments: None
Status: Offered

BIOL510001
Microbiome and Human Disease
Altindis, Emrah
Spring 2023
For thousands of years, humans have thought of themselves as single autonomous organisms. With new sequencing technologies and experiments, we are learning that the human microbiome and commensal organisms are an important aspect of host biology, and change the idea of who we really are. Recent data suggest that we are more than Homo sapiens, but a symbiotic-organism that is surrounded with trillions of microorganisms in all surfaces. Recent studies suggest that the human microbiome and commensal microbes have important roles in human health and disease. Indeed, the gut microbiota aid in normal digestion, metabolism of nutrients and drugs, and development of the gut and immune system. Reduced bacterial diversity, as well as alterations in the microbiota composition, have been associated not only with gastrointestinal disease, but also obesity, diabetes, and metabolic syndrome. Direct evidence now suggests that transfer of the microbiome can play a role in host phenotypes, homeostasis, behavior, and disease pathogenesis. Using current scientific literature and reviews, we will investigate the role of the microbiome in human health and disease. Students will make short presentations of the papers, and the class will discuss the methodology and findings of the papers.

**Credits:** 2

**Room and Schedule:** Higgins Hall 552 Tu 10:30AM-12:30PM

**Satisfies Core Requirement:** None

**Prerequisites:** BIOL2000 Molecules and Cells and additional course work in molecular cell biology. Microbiology and/or Immunology strongly recommended.

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Every Spring

**Student Level:** Undergraduate

**Comments:** None

**Status:** Offered

---

**BIOL515001**  
Vaccine Development and Public Health  
Fofana, Ismael B  
Spring 2023
Despite more than three decades of research, the development of an efficacious HIV/AIDS vaccine remains elusive. Nonetheless, the quality of knowledge generated by HIV researchers is impressive. It is no surprise that potent Ebola virus and Zika virus vaccine candidates have been developed in a short time span. This class will discuss the difficulties and successes encountered with vaccine development (AIDS, tuberculosis, malaria, small-pox, measles, poliomyelitis, tetanus, Ebola, and Zika). At a time when questions have been raised about the link between childhood vaccination regimens and autism, we will discuss the ethics, economics, problems, and benefits of modern day vaccination.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 225 TuTh 10:30AM-11:45AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2000 and additional course work in molecular cell biology or biochemistry. BIOL4570 is recommended.  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Fall

---

**BIOL538001**  
**Topics in Biomechanics**  
**Kenaley, Christopher P**  
**Spring 2023**  
This course will explore the physical principles underlying biological processes and mechanisms including movement, feeding, architecture, and transport. Drawing on physics and mechanical engineering, the course will explore how organisms swim, fly, walk, and consume resources, how they respond to moving fluids, and the relationship between their size and design of mechanical systems. Underlying all these topics will be hands-on investigations of how biological materials (e.g., wood, muscle, bone, skin, etc.) influence the mechanical behavior of complex life forms. The course will prepare students for more in-depth explorations of other related disciplines including ergonomics, orthopedics, kinesiology, and sports medicine.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 225 TuTh 12:00 Noon-01:15PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL3030. Familiarity with basic Newtonian physics and mechanics is
BIOL542001
Cancer As A Metabolic Disease
Seyfried, Thomas N, Phd
Spring 2023
Satisfies the advanced experience requirement for the Biology major. This seminar will review evidence showing that impaired cellular energy metabolism is the defining characteristic of nearly all cancers regardless of cellular or tissue origin. In contrast to normal cells, which derive most of their usable energy from oxidative phosphorylation, nearly all cancer cells become dependent on non-oxidative substrate level phosphorylations to meet energy demands. Evidence will be discussed supporting a general hypothesis that all hallmarks of cancer including genomic instability and metastasis can be linked to impaired mitochondrial function. A view of cancer as a metabolic disease will impact approaches to cancer management and prevention.

Credits: 3
Room and Schedule: Higgins Hall 465 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: BIOL2040 and BIOL3040
Corequisites: None
Cross-listed with: None

Status: Offered

BIOL543001
Genomics and Personalized Medicine
Connolly, Timothy J
Spring 2023
Satisfies the advanced experience requirement for the Biology major. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, allowing for more informed choices about health. The students will be exposed to the scientific concepts and technologies empowering personalized medicine. Through lecture, research paper reading and discussion the students will understand how human genomic information has impacted current topics in biomedical research. Students will write a research paper focused on how genomic information has advanced understanding of a human disease and how translation of genomic information will impact treatment or disease detection in the future.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 260 MW 03:00PM-04:15PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040 and a genetics or genomics course. Additional coursework in biochemistry and molecular biology is strongly recommended.  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Spring  
**Student Level:** Both  
**Comments:** None  
**Status:** Offered

---

**BIOL545001**  
**Advanced Lab in Cell Imaging**  
**Judson, Bret**  
**Spring 2023**  
This course satisfies the advanced experience requirement for biology majors. This course will survey the various visualization techniques and instruments used by scientists and biomedical researchers: light microscopy, confocal, electron microscopy, super-resolution, and image processing. Students will discuss the experimental use of these techniques and instruments as described in the primary literature. The laboratory component will focus on becoming familiar with the instrumentation that we have available at Boston College. The course will culminate in individual projects of the students choosing utilizing equipment that we have in the laboratory.

**Credits:** 2  
**Room and Schedule:** Higgins Hall 552 TuTh 04:00PM-06:00PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040 and additional coursework in cell and/or molecular biology.
BIOL614001
Graduate Molecular Biology
Annunziato, Anthony T, Phd
Spring 2023
This course concentrates on gene expression, chromatin dynamics, and cell-cycle control in eukaryotic cells. Topics include transcriptional and posttranscriptional regulatory mechanisms, DNA replication and methylation, RNA interference, microarray analysis, and the generation and use of transgenic organisms. The course is designed for graduate students who have successfully completed undergraduate biochemistry and molecular cell biology courses.

Credits: 2
Room and Schedule: Higgins Hall 465 Tu 01:00PM-02:50PM

Capstone Courses: Summer 2022
No records found

Capstone Courses: Fall 2022

**UNCP550101**
**Capstone: Authenticity and Human Development**
**Bracher, Elizabeth R**
**Fall 2022**
Seniors only. Capstone Seniors only. classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. The path to becoming a more authentic person is twofold: coming to know who you are and who you are not as well as sharing this information with others. As you progress along this path, you become more authentic and are rewarded for doing so. Why should you want to be more authentic? Misrepresenting yourself costs energy. More importantly, people just seem to know intuitively who is authentic and who is not. If you are, you will be seen as more trustworthy, more deserving of love, more skilled as a leader, and more likable. This course will help you to better recognize and improve on the areas of personal development called for in every Capstone course: your education up to now and in the future; your relationships; your role in society; your vocational callings and choice of career; and your spirituality. Assignments include group projects, personal projects, and lots of small and large group discussions.

---

**UNCP550502**
**Capstone: Life and Career Planning**
**Capalbo, Robert F**
Fall 2022
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This course provides an overview of life and career planning in the context of (1) career, (2) personal relationships, (3) spirituality, and (4) ethical decision making. Students are asked to develop autobiographical responses to a series of questions about their lives to find themes related to possible careers and relationship issues. Readings, cases, exercises, and guest lecturers will amplify those personal themes and common issues in life as we enter the twenty-first century. The integration of spirituality and ethical decision making into one's life will be addressed by readings on ethical perspectives and the students' written reflections.

Capstone: Life and Career Planning
Capalbo, Robert F
Fall 2022
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This course provides an overview of life and career planning in the context of (1) career, (2) personal relationships, (3) spirituality, and (4) ethical decision making. Students are asked to develop autobiographical responses to a series of questions about their lives to find themes related to possible careers and relationship issues. Readings, cases, exercises, and guest lecturers will amplify those personal themes and common issues in life as we enter the twenty-first century. The integration of spirituality and ethical decision making into one's life will be addressed by readings on ethical perspectives and the students' written reflections.

Capstone: The Balancing Act
Olivieri, Scott D
Fall 2022
Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. College students have many competing demands: academics, friends, family, faith, service, and work all need attention. This just in--after college, it gets worse! This course begins with students reflecting on their commitments and choices up to now. Students will then establish personal priorities and learn strategies to become engaged in their future long-term commitments to career and community, while attending to family, friends, faith, personal well-being, and leisure. Readings will explore the changes ahead for young professionals balancing family, graduate school, and/or careers. The final assignment will be developing a personal road map to a full, meaningful, and balanced life.

Capstone: Working, Playing, Being
Storey, David E
Fall 2022
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. The conventional wisdom is that BC student culture is "work hard, play hard." But what do we mean by "work" and "play" here? How do these implicit meanings reflect broader cultural forces? And do these meanings serve us well? Senior year is an exciting but anxious time, and this seminar is a chance for you to: (a) reflect on how your education has shaped you, and how you have shaped your education and (b) explore your goals, fears, hopes, and expectations around life post-graduation with a small group of peers. We will examine: (1) the meaning of, and relationship between, work and leisure in your own life; (2) how they developed since your freshman year in light of your education at BC and; (3) how they figure into your vision of a fulfilling life.

Capstone: A Life Well Lived
DeChiara-Quenzer, Deborah
Fall 2022
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. This course engages students in serious reflection on what it means to have "a life well lived." It is advantageous to do this reflection at this time in your life, as it affords you time and opportunity to shape your life going forward. What kind of life do you hope to live? What will bring you peace and satisfaction--dare we say, even happiness? Students will be asked to examine themselves by looking both backwards and forwards in many dimensions of their lives (education, ethics, relationships, career, etc.) while learning what others have said about having a meaningful life.

Capstone: Surviving Life with Humor
Jayasundera, Thusitha
Fall 2022
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only.
A sense of humor can be a powerful tool that helps us navigate real-life situations that may otherwise cause us anxiety and distress. This course aims to sharpen your emotional intelligence through humor, and help cultivate values and attitudes that will serve you well in life. Class discussions will allow us to acknowledge another point of view with empathy, and convey our own ideas with humor and humility. We will study the Capstone foundations (spirituality, vocation, citizenship, relationships) through the lens of humor and, hopefully, equip you with yet another valuable tool for success, as you embark on the next chapter of your lives.

Capstone: Boston College/Your Life
Burns, John J
Fall 2022
This seminar will focus on the historical development of Boston College and the continually evolving interaction between its traditions and its students. Students will do archival research on some aspect of Boston College in which they have a personal interest and will record oral histories with faculty, administrators, and alumni who can describe the ambiance and personalities of different periods that have shaped the modern university. All students will write a series of reflective essays on their experience with Boston College traditions and the impact it has had on their own personal views of themselves, their pasts, and their futures.

Capstone: Into the Woods
Rudner, Bonnie
Fall 2022
All readers, young and old, share the wonder in fairy tales. This serves a deeper purpose: to experiment and learn our boundaries and responsibilities. There are dangers in woods, but Red Riding Hood learns a lot, frees herself, and embarks upon life. The symbolic journey into the woods allows seniors to leaves the "woods of BC" with optimism and commitment. How will you negotiate transitions into society with the wisdom from your journey here?

Capstone: Leadership and Mindfulness
Waddock, Sandra A
Fall 2022
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. No matter what your major, you will participate in groups and organizations that will consistently ask or expect you to lead. The best leader is authentic, has integrity, is self- and other-aware, and acts with this awareness firmly in mind. Good leaders, that is, act mindfully with respect for the people and world around them. This course explores your development as a mindful focusing inward and outward, reflecting on where you have come from and where you are going, what type of world you want to live in, your relationships with others, and how you can be an effective leader.

**Capstone: Finding and Following Life's Calling**  
**Harrington, J**  
**Fall 2022**  
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. We live in changing times. Major social trends are impacting us as individuals, employees, family members, and citizens. These changes call on us to play a much more pro-active role in managing our lives (where possible) and to respond to the unexpected callings we hear. Doing this effectively requires an in-depth self-understanding coupled with a heartfelt desire to live a life of meaning. This course will help students develop a clearer sense of identity through a rigorous self-assessment process. It will help each answer the questions: Who am I? How can I make a difference in the world?

UNCP550101
Capstone: Authenticity and Human Development
Bracher, Elizabeth R
Spring 2023
Seniors only. Capstone Seniors only. classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. The path to becoming a more authentic person is twofold: coming to know who you are and who you are not as well as sharing this information with others. As you progress along this path, you become more authentic and are rewarded for doing so. Why should you want to be more authentic? Misrepresenting yourself costs energy. More importantly, people just seem to know intuitively who is authentic and who is not. If you are, you will be seen as more trustworthy, more deserving of love, more skilled as a leader, and more likable. This course will help you to better recognize and improve on the areas of personal development called for in every Capstone course: your education up to now and in the future; your relationships; your role in society; your vocational callings and choice of career; and your spirituality. Assignments include group projects, personal projects, and lots of small and large group discussions.

**Capstone: Your Future, Your Choice**  
**Michalczyk, Susan A**  
**Spring 2023**  
Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Reflecting upon your BC years and looking ahead, in Capstone you'll center yourself in your present to process learning and relationships. Journeying forward, you'll learn more about yourself with each choice you make. Written and visual narratives, fiction, autobiography and film connect your college experience with numerous aspects of your life -- past, present, future. In our search for meaning, we draw strength from relationships: to self, to others, to God. The profoundest relationships build upon identifying the self as other, recognizing the sacred in the profane. Choosing a life of mutual respect defines the human condition at its best.

Capstone: Growing Up Ethnic in America
Sarr, Akua
Spring 2023
Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. In this seminar students will read writing that depicts a variety of experiences but suggest that what constitutes an American identity is far from settled. Ethnic difference has a profound effect on personal and social understandings of what it means to be an American. As we discuss the literature, students will be expected to share their own personal narratives of growing up stories of race, ethnicity, class, gender, faith, and nationality and what it means to be American. Some of the writers we will read include: Jhumpa Lahiri, Amy Tan, Louise Erdrich, Chang Rae-Lee, Sherman Alexie, Sandra Cisneros, Junot Diaz, Edwidge Danticat, Mat Johnson and Ta-Nehisi Coates.

Capstone: Love and Indoctrination: A Foundation for the Rest of Your Life
Kaplan-Maxfield, Thomas
Spring 2023
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. In our world of political spin and fake news, the surveillance state and social media, the pressure to separate what’s real and valuable from what’s fake and mere propaganda (another way of saying lies) is paramount, and critical for figuring out how to live, practically, spiritually, intellectually and psychologically. In George Orwell’s 1984, the affair of Winston Smith and Julia threatens the entire structure of Big Brother. Why? What is it about love that threatens large systems based on indoctrination? In this course we will explore and develop working definitions of both love and indoctrination in order to differentiate them.

UNCP552201
Capstone: Creativity and Self
Roberts, Susan A
Spring 2023
Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Creativity is the act of bringing that which does not exist into existence, of bringing forward that which has previously never lived. It is the remarkable experience of bringing something out of nothing. In order to bring something new into the world, you must be willing to go into the unknown. Just as the poet might listen inwardly and stay open for the next word and just as the artist might pay attention to the images that arise from within, creativity asks that we have one foot in what is known, or existence, and one foot in what is not-known, or non-existence. This requires an ability to be still, to look both inward and outward, and then to record the resulting art-making or in life. In this Capstone course, students will attend to two areas: the meaning of art and mindfulness, and their own history of making (or lack thereof) and how they would like to build artistic sensibility, creativity and creation into their lives. We will investigate the spiritual roots of creativity, and the ways in which creativity and appreciation of art and art-making can contribute meaningfully to the development of one as a full citizen of the world. You do not have to have any experience in art-making to take this course. Texts include: Creativity: Where the Divine and Human Meet, by Matthew Fox and Art and Fear: Observations on the Perils (and Rewards) of Artmaking, by David Bayles and Ted Orland.

**Capstone: Your Roaring 20s (and Beyond)**  
**Regan, Tracy L**  
**Spring 2023**
Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. As your graduation from Boston College looms, soon you'll have the opportunity to join the chorus of people proclaiming that college was the best four years of their life. Why does everyone say that and do you feel that way? If not, will you feel that way at some point in the future? The coveted real world awaits you where you'll finally have a chance to set the world aflame. As you approach this important juncture in your life, this class will provide you the opportunity to reflect and discuss your time on the Heights all the while helping you prepare for the decade(s) ahead. How did you grow during your time here? What lessons did you learn? Do you have any regrets? What are your most cherished memories? Did you become a person for others? And how will you carry the lessons you learned into the next proverbial chapter of your life as you navigate a career, relationships, a family, getting older, etc.? You'll have a chance to read a variety of viewpoints about the next decade of your life and beyond. As a class, we'll consider your academic, professional, and personal development in the context of relationships, spirituality, and citizenship. You'll join in conversation with your peers, under the guidance of an older economist who has experienced a lot of this already, and be ready to engage in lively dialogue on a weekly basis with the opportunity to reflect, think, and debate matters through a series of written assignments.

Capstone: Poets, Philosophers, and Mapmakers
McNellis, Paul W, SJ
Spring 2023
We go through life with mental maps of reality in various degrees, implicit or explicit. A liberal arts education presupposes such a map of the intelligible world. Is it accurate? What does your map of reality look like? How has it changed since freshman year? The goal of the seminar is to help you see what kind of map you implicitly have now and to begin to ask what you want the map to look like ten years after graduation. How do you develop an open rather than closed map?

CHEM201401
Organic Chemistry Lab II (summer)
Atkinson, Karen E
Summer 2022
This course will only be offered during the summer session. Students will acquire fundamental organic separation and purification techniques. Reactions that are studied in class will be performed in the laboratory. Compounds are analyzed using a variety of methods including spectroscopy.

Credits: 1
Room and Schedule: Dates: July 11 - August 5; Merkert Chemistry Center 21 MTuTh 12:30PM-04:30PM
Satisfies Core Requirement: None

CHEM449213
Introduction to Undergraduate Research II
Waegele, Matthias
Summer 2022
CHEM5591-5592 or CHEM5593-5594 cannot be taken concurrently.
Sophomores or juniors who show exceptional ability may engage in an independent research project under the supervision of a faculty member. The experimental work will be preceded by library research on the project and training in essential laboratory techniques.

Credits: 3
Room and Schedule: By Arrangement
**Satisfies Core Requirement:** None  
**Prerequisites:** CHEM1110 and CHEM1109 or Permission of Department  
**Corequisites:** None

Chemistry Courses: Fall 2022

CHEM110501
Chemistry and Society I
Keen, Clarissa
Fall 2022
For non-science majors or for those who do not require a lab science course. This is a two-semester sequence with the emphasis during the first semester placed on basic chemical principles and their application to environmental issues. Topics covered include air and water pollution, global warming, ozone depletion, hazardous waste, and energy use and alternative energy sources. The goal of the course is to develop a knowledge base from which one can make intelligent decisions about local global environmental issues as well as formulate solutions to the ever-increasingly complex problems of today's technological society.

CHEM110901
General Chemistry I
Hartmann, Nathaniel J
Fall 2022
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships and chemical equilibrium and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

**Credits:** 3  
**Room and Schedule:** Devlin Hall 8 MWF 09:00AM-09:50AM  
**Satisfies Core Requirement:** Natural Science  
**Prerequisites:** One year of high school chemistry.  
**Corequisites:** CHEM1111  
**Cross-listed with:** None  
**Frequency:** Every Fall

Zhou, Huiqing
Fall 2022
Laboratory required of all students enrolled in CHEM1109. One three-hour period per week. Experiments reflect and apply the principles learned in the lecture course. Computers are used to both acquire and analyze data. The semester concludes with a group project where students are required to design their own experiments to solve a problem.

Credits: 1
Room and Schedule: Merkert Chemistry Center 116 F 02:00PM-04:50PM
Satisfies Core Requirement: None
Prerequisites: None

CHEM111701
Honors Modern Chemistry I
Waegele, Matthias
Fall 2022
This course is intended for students from any major (including undecided) with a strong foundation and interest in chemistry. CHEM1117 begins with the theoretical description of atomic and molecular structure and with examples of modern experimental techniques for visualizing and manipulating individual atoms and molecules. The laws of thermodynamics and kinetics are studied to understand why chemical reactions occur at all, why it is that once reactions start they can't go all the way to completion, and how molecules act as catalysts to speed up reactions without being consumed themselves.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: Natural Science
Prerequisites: Permission of Department
Corequisites: CHEM1119
Cross-listed with: None
Frequency: Every Fall
Student Level: Undergraduate
Comments: None
Status: Offered

CHEM111702

CHEM111901
Honors Modern Chemistry Laboratory I
Young, Allison P
Fall 2022
Laboratory required for all students enrolled in CHEM1117. This laboratory course stresses discovery-based experiments. It uses state-of-the-art instrumentation to illustrate the principles discussed in CHEM1117-1118 and introduces students to techniques used in modern chemical research. One three-hour period per week.

Credits: 1
Room and Schedule: Merkert Chemistry Center 120 M 01:00PM-04:00PM

Satisfies Core Requirement: None
CHEM116101
Life Science Chemistry
Hartmann, Nathaniel J
Fall 2022
This course first introduces basic chemical principles in preparation for a discussion of the chemistry of living systems that forms the major part of the course. Organic chemical concepts will be introduced as necessary, and applications will be made wherever possible to physiological processes and disease states that can be understood in terms of their underlying chemistry.

Credits: 3
Room and Schedule: Fulton Hall 511 (Auditorium) TuTh 10:30AM-11:45AM
Satisfies Core Requirement: None

CHEM223101
Organic Chemistry I
Deak, Holly L
Fall 2022
An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties, reaction mechanisms, and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 3
Room and Schedule: Merkert Chemistry Center 127 MWF 09:00AM-09:50AM
Satisfies Core Requirement: None
Prerequisites: CHEM1110 or Note that CHEM2231 is a prerequisite for CHEM2232
Corequisites: CHEM2233

Students acquire fundamental organic lab techniques in the context of principles learned in the lecture course. The semester concludes with a group project where students are required to design their own experiments to solve a problem.

Credits: 1
Room and Schedule: Merkert Chemistry Center 18 Th 05:00PM-08:50PM
Satisfies Core Requirement: None
Prerequisites: None
Corequisites: CHEM2231
Cross-listed with: None

CHEM223701
Gateway: Organic Chemistry Discussion I
Lee, Paul S
Fall 2022
Required of all students in Gateway Organic Chemistry. Discussion will offer a fairly comprehensive review of the material presented in lecture, with a focus on the key concepts needed for problem-solving in a small group setting.

Credits: 1
Room and Schedule: Carney Hall 305 W 02:00PM-02:50PM
Satisfies Core Requirement: None
Prerequisites: Permission of Department
Corequisites: CHEM2231
Cross-listed with: None
Frequency: Every Fall
Student Level: Undergraduate
Comments: None
Status: Offered

CHEM224101
Honors Organic Chemistry I
Zhang, Xiao-Xiang
Fall 2022
This course is a continuation of the CHEM1117-1118 honors sequence and will concentrate on the structure, bonding, and reactivity of organic compounds. Particular emphasis will be placed on stereochemistry, conformational analysis, reaction mechanisms, principles of organic synthesis, and modern spectroscopic methods.

**Credits:** 3  
**Room and Schedule:** Merkert Chemistry Center 129 TuTh 09:00AM-10:15AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** CHEM1118 and CHEM1117 and CHEM1119 and CHEM1120 or Permission of Department  
**Corequisites:** CHEM2243  
**Cross-listed with:** None  
**Frequency:** Every Fall  
**Student Level:** Undergraduate  
**Comments:** None  
**Status:** Offered

CHEM224301
Honors Organic Chemistry I Laboratory
Young, Allison P
Fall 2022
Laboratory course required for students enrolled in Honors Organic Chemistry (CHEM2241). Students will be instructed in experimental techniques relevant to research in contemporary organic chemistry. It will solidify concepts that are taught in lecture and provide a forum for discovery-based learning in organic chemistry.

Credits: 1
Room and Schedule: Merkert Chemistry Center 21 W 12:15PM-04:15PM
Satisfies Core Requirement: None
Prerequisites: None
Corequisites: CHEM2241
Cross-listed with: None
Frequency: Every Fall
Student Level: Undergraduate

Corequisites: CHEM2241
CHEM335101
Analytical Chemistry
Metz, Kenneth R, PHD
Fall 2022
Designed primarily for sophomore and junior students, this course is an introduction to the principles and practice of analytical chemistry, including the statistical analysis of data and widely-used chemical methods and instrumental approaches such as chromatography, spectrophotometry, and electrochemistry. In the laboratory, the aims are for students to develop good analytical technique and to acquire accurate, precise data.

Credits: 4
Room and Schedule: Higgins Hall 310 MWF 11:00AM-11:50AM
Satisfies Core Requirement: None
Prerequisites: CHEM1110 and CHEM1109
Corequisites: None
Cross-listed with: None

CHEM446101
Biochemistry I
Weerapana, Eranthie
Fall 2022
This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.

Credits: 3
Room and Schedule: Merkert Chemistry Center 127 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: CHEM2231 and BIOL2000 and CHEM2232 or equivalent.
Corequisites: None
Cross-listed with: None
Frequency: Every Fall
Student Level: Both
Comments: None
Status: Offered

CHEM446102
Biochemistry I
Rubino, Madison A
Fall 2022
This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.

CHEM449118
Introduction to Undergraduate Research I
Weerapana, Eranthie
Fall 2022
CHEM5591-5592 or CHEM5593-5594 cannot be taken concurrently. Continuation to CHEM4492 requires permission of the adviser. Sophomores or juniors who show exceptional ability may engage in an independent research project under the supervision of a faculty member. The experimental work will be preceded by library research on the project and training in essential laboratory techniques.

Credits: 3

CHEM551301
Synthetic Biology: at the interface of Biology, Chemistry, and Engineering
Chatterjee, Abhishek
Fall 2022
Traditionally, biological sciences have focused on characterizing existing biological systems. As our understanding of the natural biological systems advanced dramatically over the last century, opportunities to create 'synthetic' biological systems with novel functions emerged. Synthetic Biology is a young cross-disciplinary field that aspires to transform the promise of engineering new biological functions into a reality. Over the last two decades, synthetic biology has advanced tremendously, providing us transformative new tools to study biology, as well as powerful new therapeutic strategies that are revolutionizing modern medicine. This course will provide a primer to this discipline by introducing some of the core topics, followed by student-led discussions of recent literature.

Credits: 3
Room and Schedule: Merkert Chemistry Center 129 TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
Prerequisites: CHEM2231; one course in biochemistry; one semester of molecular/cell biology

CHEM553101
Modern Methods in Organic Synthesis I
Hoveyda, Amir H; Wasa, Masayuki
Fall 2022
Survey and analysis of reactions employed in the synthesis of medicinally significant compounds. An in-depth understanding of the mechanistic details for each transformation will be emphasized. Topics will relate fundamental structural and electronic properties to issues of chemical reactivity. An emphasis will be placed on carbon-carbon bond and ring forming reactions.

Credits: 3
Room and Schedule: Merkert Chemistry Center 129 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: None
Prerequisites: CHEM2232 or equivalent
Corequisites: None

CHEM553701
Mechanistic Organic Chemistry
Byers, Jeffery
Fall 2022
This course will explore factors influencing organic reaction mechanisms and methods for their determination. A partial list of the topics to be covered includes chemical bonding and consequences for structure and reactivity; steric, electronic, and stereoelectronic effects; conformational analysis; thermodynamic and kinetic principles; applications of molecular orbital theory; and reactive intermediates.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 MWF 12:00 Noon-12:50PM

CHEM553901  
Principles and Applications of NMR Spectroscopy  
Jayasundera, Thusitha  
Fall 2022  
Nuclear Magnetic Resonance (NMR) is an indispensable tool for all organic chemists. This course will introduce the theory of NMR spectroscopy with concurrent experiments that illustrate these concepts firsthand, so that the subject matter is easier to absorb. Applications of NMR in biochemistry will also be discussed, with a guided, hands-on project that exemplifies how NMR is utilized to study large macromolecules (such as proteins and nucleic acids), which will provide valuable practical experience to students. Material covered in this class will prepare you well for graduate studies, or a chemistry/biochemistry-related career in industry.

Credits: 3  
Room and Schedule: Merkert Chemistry Center 130 Tu 06:00PM-08:30PM

CHEM556001
Principles of Chemical Biology
Zhou, Huiqing
Fall 2022
An introduction to the chemistry of biological macromolecules, including proteins, nucleic acids, and carbohydrates. Students will learn the structure and nomenclature of the monomer building blocks as well as the macromolecules. Chemical principles that define secondary and tertiary biomolecular structure as well as state-of-the-art chemical (or chemical-biological) synthetic procedures will be presented. Examples of specific types of binding interactions, catalysis, or recognition processes as viewed from a chemical perspective will be discussed.

Arrangement with an individual faculty member and departmental permission is required.
This is a two-semester course and may not be taken for only one semester. A substantial independent research project performed under the supervision of a faculty member. Seniors whose projects are judged by the department to be of the highest quality, and who maintain a minimum GPA of 3.70, will be nominated for Scholar of the College recognition.

CHEM670601
Physical Chemistry: Principles and Applications
Bao, Junwei L
Fall 2022
This course intends to build a solid and rigorous foundation for chemistry graduate students to understand chemistry and materials at the microscopic level, and study the physical nature of bonding and chemical reaction dynamics quantitatively. We focus on fundamental principles of quantum mechanics and their connections to chemistry/chemical physics. Topics covered in this course include principles of quantum mechanics, the connections between classical and quantum dynamics, exactly solvable systems, variational principle, introductory perturbation theory, and Hartree-Fock theory. We will also cover some necessary mathematical tools that are tremendously useful in understanding modern physical chemistry.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 MWF 09:00AM-09:50AM
Satisfies Core Requirement: None
Prerequisites: This course is theory/math-intensive and involves active learning. We strongly recommend students who are well prepared in introductory quantum mechanics (one-semester undergraduate-level quantum mechanics or equivalent) and in math (multivariable c...

Chemistry Courses: Spring 2023

CHEM110601
Chemistry and Society II
Keen, Clarissa
Spring 2023
For non-science majors or for those who do not require a lab science course. This is a two-semester sequence. The second semester focuses on the basic principles of organic chemistry and topics covered include the chemistry of life, nutrition, medicine, and agriculture. The goal of the course is to develop a knowledge base from which one can make intelligent decisions about local global environmental issues as well as formulate solutions to the ever-increasingly complex problems of today's technological society.

Credits: 3
Room and Schedule: Fulton Hall 511 (Auditorium) TuTh 03:00PM-04:15PM
Satisfies Core Requirement: Natural Science
Prerequisites: CHEM1105 OR a high school chemistry course

CHEM111001
General Chemistry II
Hartmann, Nathaniel J
Spring 2023
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

Credits: 3
Room and Schedule: Devlin Hall 8 MWF 09:00AM-09:50AM
Satisfies Core Requirement: Natural Science

CHEM111019
General Chemistry II
Young, Allison P
Spring 2023
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

Credits: 0
Room and Schedule: Merkert Chemistry Center 129 F 02:00PM-02:50PM
Satisfies Core Requirement: Natural Science
Prerequisites: CHEM1109
Corequisites: CHEM1112

CHEM111501
Fundamentals of Chemistry
Fox, Daniel J
Spring 2023
This course is designed to prepare students for the first semester of General Chemistry. The course will consist of two major parts, the first of which will focus on mathematical skills that are fundamental to the deeper understanding of chemical concepts, including but not limited to: ratios, percentages, algebra, exponentials, base 10, and natural logarithms. The second part of the course will focus on basic chemical concepts such as atomic structure and isotopes, balancing chemical equations, and stoichiometry. Once they have mastered these proficiencies, students will have a strong foundation in the skills necessary to succeed in higher level chemistry courses.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 MWF 01:00PM-01:50PM

CHEM111801
Honors Modern Chemistry II
Wasa, Masayuki
Spring 2023
This is the second part of a one-year course that serves as the Honors alternative to the two-semester General Chemistry CHEM1109-1110. This course will build upon the chemical fundamentals that were covered in the first semester to introduce organic chemistry as well as its physical basis. Topics to be covered include the structure and reactivity of organic compounds.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: Natural Science

CHEM223216
Organic Chemistry II
Snapper, Marc
Spring 2023
An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties and reaction mechanisms and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 0
Room and Schedule: Campion Hall 204 Th 04:00PM-04:50PM
CHEM223217
Organic Chemistry II
Deak, Holly L
Spring 2023
An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties and reaction mechanisms and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 3
Room and Schedule: Merkert Chemistry Center 127 MWF 10:00AM-10:50AM
Satisfies Core Requirement: None
Prerequisites: CHEM2231
Corequisites: None
Cross-listed with: None
Frequency: Every Spring
Student Level: Undergraduate
Comments: None
Status: Offered
Laboratory required of all students enrolled in CHEM2232. One four-hour period per week. Having acquired the necessary lab skills in Organic Chem Lab I, students now can carry out reaction chemistry in the laboratory that is being taught in the lecture course.

Credits: 1
Room and Schedule: Merkert Chemistry Center 18 M 12:00 Noon-03:50PM
Satisfies Core Requirement: None
Prerequisites: CHEM2233
Corequisites: None
Cross-listed with: None

CHEM224201
Honors Organic Chemistry II
Chatterjee, Abhishek
Spring 2023
This course is a continuation of the CHEM1117-1118 honors sequence and will concentrate on the structure, bonding, and reactivity of organic compounds. Particular emphasis will be placed on stereochemistry, conformational analysis, reaction mechanisms, principles of organic synthesis, and modern spectroscopic methods.

Credits: 3
Room and Schedule: Merkert Chemistry Center 129 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: CHEM2241 or Permission of Department
Corequisites: CHEM2234
Cross-listed with: None
Frequency: Every Spring

CHEM332201  
Introduction to Inorganic Chemistry  
Fox, Daniel J  
Spring 2023  
Though not required, one year of Organic Chemistry (CHEM2231-2232 or CHEM1118 and CHEM2241) is recommended as a prerequisite for this course. This course offers an introduction to inorganic chemistry. Topics include: applications of group theory to describe structure and bonding, coordination chemistry, organometallic chemistry, bioinorganic chemistry, crystal packing, and semiconducting and superconducting materials.

Credits: 3  
Room and Schedule: Merkert Chemistry Center 130 MWF 11:00AM-11:50AM  
Satisfies Core Requirement: None

CHEM446201  
**Biochemistry II**  
**Zhou, Huiqing**  
**Spring 2023**  
This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.

**Credits:** 3  
**Room and Schedule:** Merkert Chemistry Center 127 TuTh 09:00AM-10:15AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** CHEM4461 and CHEM2232 or equivalent.

CHEM447601
Physical Chemistry II
Bao, Junwei L
Spring 2023
This course intends to build a foundation for understanding the structures of matter and chemical reactions via quantum mechanics and the relationship between structures and macroscopic properties via statistical mechanics. This course serves as the gateway to appreciating modern chemical science with rigorous and quantitative physical models. The topics to be covered include basic principles of quantum mechanics, exactly solvable systems, variational principle, molecular orbital theory and Hückel theory, qualitative solid-state band structure, basic group theory, Boltzmann distribution, ideal-gas statistical thermodynamics, heat capacity of simple solids, and transition-state theory for reaction rate.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: None
Prerequisites: MATH2202 and PHYS2101 or PHYS2201 Introductory Physics II (may be taken concurrently). MATH2210 Linear Algebra and PHYS3100 Vibrations and Waves are recommended but not required.
Corequisites: MATH2202 and PHYS2100-2101/2200-2201 are pre- or co-requisites.

CHEM551001
Drug Discovery and Medicinal Chemistry
Deak, Holly L
Spring 2023
This course will provide an overview of the drug development process with an emphasis on the discovery and pre-clinical phases of developing a therapeutic agent. Students will gain an understanding of the fundamental concepts of drug design including the relationships between physicochemical properties, pharmacokinetics, pharmacology, and biological mechanism of action and the chemical structure of drug candidates. Case studies of important drugs will be invoked to facilitate discussion surrounding these topics. The chemical synthesis of these drugs will also be emphasized. The course will conclude with guest lectures from scientists at the forefront of the field. The foundational understanding of drug discovery and development gained in this course will be beneficial to those considering research and healthcare careers.

Credits: 3
Room and Schedule: Higgins Hall 310 MWF 11:00AM-11:50AM
Satisfies Core Requirement: None
CHEM551201
Peptide Therapeutics
Gao, Jianmin
Spring 2023
The landscape of therapeutic drugs had been dominated by synthetic small molecules and monoclonal antibodies until recent years. Adding into these well-known modalities, peptides have been gaining increasing attention as therapeutics, which is evident with the rapidly increasing number of peptide drugs receiving approval by the Food and Drug Administration. This course seeks to survey different classes of peptide drugs. Importantly, with selected examples of peptide drugs, we will discuss the biochemical basis of their mechanism of action as well as the medicinal chemistry efforts that ultimately lead to these powerful therapeutic drugs.

Credits: 3
Room and Schedule: By Arrangement
Satisfies Core Requirement: None
Prerequisites: CHEM2232 and CHEM4461 or Other equivalent biochemistry course, such as CHEM4465, is also acceptable.

CHEM552301
Organometallic Chemistry
Liu, Shih-Yuan
Spring 2023
The course is intended for graduate students and advanced undergraduates who have completed or are currently enrolled in organic and inorganic chemistry courses. This course will present concepts of organometallic chemistry, e.g., the chemistry of compounds that have bonds between metals and carbon. Organotransition metal chemistry will be emphasized. Among the areas to be covered will be structure and bonding in organotransition metal complexes, ligand systems, catalysis, polymerizations, common reactions, and applications in organic synthesis.

**CHEM552801**

**Introduction to Characterization Methods of Materials**

**Jin, Jing**

**Spring 2023**

When you have synthesized a new material, what is the best way to assess its characteristics? If you have an unknown material sample, how can you identify it? Material characterization is the way to find the answer. In this course, you will be introduced to the basic principles of each tool and provided with hands-on training. The course will cover surface analysis, thermal analysis, optical analysis, phase and structure analysis and mechanical analysis tools. With the certification of this course, you will be pre-qualified as a user of the Materials Characterization Core facility.

**Credits:** 3

**Room and Schedule:** 245 Beacon Street Room 230 TuTh 05:30PM-06:45PM

**Satisfies Core Requirement:** None

**Prerequisites:** CHEM1110 or A course in physics is also recommended as a pre-requisite.

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Periodically
Innovations in the fields of biology and medicine over the last three decades have been rapid and immense. This course will focus on the applications of magnetic resonance to solve problems in chemistry, chemical biology, biochemistry, and biophysics. The backdrop for the class will be a hands-on exercise, working on the complete NMR chemical shift assignments (backbone, side chain, distance) towards the structure determination of a small protein. Concurrently, we will discuss topics such as magnetic resonance imaging (MRI), NMR of metabolomics and nucleic acids (DNA/RNA), NMR in drug discovery, dynamic nuclear polarization (DNP) and electron paramagnetic resonance (EPR) spectroscopy.

This course covers modern synthetic methods in polymer chemistry and general principles that
govern the unique properties of macromolecules. Synthetic methods that will be covered
include radical, anionic, and cationic initiated polymerization reactions as well as metal-
mediated polymerization reactions. Strategies used by chemists to control polymer molecular
weight, stereochemistry (i.e., tacticity), and polymer microstructure (e.g., block, random, and
alternating co-polymers) will be emphasized. Polymer characterization techniques will also be
covered that include measuring molecular weight and molecular weight distributions, and
determining polymer thermal and mechanical properties. To complement tutorial-style lectures,
this course also consists of seminar-style talks given by the instructors and invited speakers on
contemporary research topics in polymer science that cover a wide range of topics, such as
conductive polymers, fluoropolymers, sequence-controlled polymers, biomaterials, sustainable
polymers, polymer networks, drug delivery, and mechanochemistry.

**Chemical Biology: Structure and Function**

**Weerapana, Eranthie**

**Spring 2023**

A major component of chemical biology is the application of chemical tools to the study of biological systems. This course will provide an overview of techniques such as genome sequencing, mass spectrometry-based proteomics, fluorescence imaging and unnatural amino-acid incorporation into proteins, with emphasis on examples drawn from the current literature. There will also be a focus on the mechanism of action of drugs, incorporating aspects of both the chemistry and biology of drug design.

CHEM559605
Advanced Research in Chemistry II
Hoveyda, Amir H
Spring 2023
Seniors only.
Arrangement with an individual faculty member and departmental permission is required.
This is a two-semester course and may not be taken for only one semester. A substantial independent research project performed under the supervision of a faculty member. Seniors whose projects are judged by the department to be of the highest quality, and who maintain a minimum GPA of 3.70, will be nominated for Scholar of the College recognition.

CHEM661101
Scientific Communication in Chemistry
Morken, James P
Spring 2023
This course seeks to best facilitate the transition of incoming graduate students to successful researchers in chemistry. Specifically, students in this course will practice and improve on various communication skills including scientific presentations, as well as writing articles and proposals. Ethics and social responsibilities of performing chemical research will also be discussed.

Credits: 3
Room and Schedule: 245 Beacon Street Room 204 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: Undergraduates may enroll with permission of the instructors.
Corequisites: None

The goal of this course is to build solid reading skills in ancient Greek language by providing an intensive and comprehensive introduction to the basics of Greek grammar and syntax. The course meets for twelve weeks and is divided into two sessions. The first session will begin to guide students through the fundamentals of the language using Hansen and Quinn, Greek An Intensive Course. The second session will complete Hansen and Quinn and proceed to readings in the original.

CLAS170201
Rome: Art, Regime, and Resistance
Polt, Christopher B
Fall 2022
Core Renewal: Enduring Questions For Freshmen Only Augustus, the first Roman emperor, boasted that he "found Rome a city of brick and left it a city of marble." His urban revolution was not merely physical: in updating Rome as a new world capital, he also altered its narratives of civic and cultural identity, reshaping its historical myths as a way to redefine Roman virtues and vices. This course explores ways in which artists in the city of Rome contributed to, and contested, this Imperial project, examining how writers, artisans, and intellectuals in the early Empire worked to construct personal and communal identity within their urban landscape.

CLAS170301  
St. Petersburg: Dream and Reality  
Epstein, Thomas  
Fall 2022
To what kinds of life and culture do great cities give rise? Founded in 1703 by Peter the Great on the barely inhabited headwaters of the Neva river, St. Petersburg quickly became one of Europe's great modern cities and the site of several artistic and political revolutions. Torn between utopian aspirations and earthly realities, heaven and earth, Petersburg fascinated several of Europe's greatest authors: among them Pushkin, Gogol, Dostoevsky, and Bely. This course will survey the history and culture of St. Petersburg, including its fine arts and fabulous music, while concentrating on literary expression and social and philosophical reflection about the meaning of St. Petersburg for Russian and beyond.

The question of what constitutes the good life preoccupied Russian society of the 19th century. In the work of the great novelist and "repentant nobleman" Leo Tolstoy life and art converge in a quest for moral self-perfection. In his "disciple" Anton Chekhov, born thirty-plus years after Tolstoy, this same quest receives a radically different response. We will explore these fascinating writers on their own terms and in dialogue via a study of Chekhov's plays, short stories, and letters, and Tolstoy's novellas, various "confessions," and Anna Karenina. The ways in which art poses ethical questions will receive special attention.

CLAS220601
Roman History
Eshleman, Kendra J
Fall 2022
A study of the social, political and cultural history of ancient Rome from its foundation by Romulus to the rise of Constantine and late antiquity. The course will focus on the development of Roman social and political institutions, the Roman conquest of the Mediterranean, the evolution of Roman identity, and the rise and spread of Christianity. Emphasis will be on the study of the ancient sources: literary, historiographic, archaeological and epigraphic.

Credits: 3
Room and Schedule: Devlin Hall 227 MWF 12:00 Noon-12:50PM
Satisfies Core Requirement: History I
Prerequisites: None
Corequisites: None
Cross-listed with: HIST1091

Student Level: Both
This course explores the mythology of ancient Greece, Rome, and the Near East within its cultural, political, historical, and religious contexts. You will meet (or renew your acquaintance with) mythical figures like Zeus, Gilgamesh, Medusa, and Helen as they appear in multiple literary genres and other artistic media. In order to analyze and interrogate these myths we will use ancient and modern frameworks for thinking about what mythology is and what it does. What can a myth tell us about the civilization that created, adopted, or adapted it? What do our uses of Classical mythology--and our creations of our own myths--tell us about ourselves?

From its beginnings as a small city-state in central Italy, Rome built a vast multicultural empire stretching across the entire Mediterranean and much of Europe. We will travel through this empire, visiting such different peoples and provinces as the Germans and the Jews, Britain and Greece. How did those people remain loyal to their origins while also becoming Roman? How did the different cultures included within the empire transform who "the Romans" were and what it meant to be Roman? How did the emperors--those larger-than-life figures like Augustus and Nero--use the diversity of the empire to craft their public images as conquerors or as...Greek actors? We'll use a combination of written sources, archaeological evidence, and even visual art to investigate these questions and to explore the ever-expanding melting pot of the Roman world.

CLAS225401
The Culture of Athenian Democracy
Hoffman, Gail L
Fall 2022
A political and cultural history of Athens during the creation and height of its democracy (circa 480-400 B.C.E.). The course will consider the Persian Wars and their effect on political and constitutional developments in Athens, the workings of the Athenian Democracy under Pericles, and the eventual collapse following the Peloponnesian War. Readings in translation include Thucydides, Plutarch, Aristotle, Xenophon, Plato, and the Greek playwrights (Aeschylus, Sophocles, Euripides, and Aristophanes). Emphasis will be on integrating historical, literary, and archaeological evidence to provide as complete a picture as possible of this dynamic period of ancient history.

CLAS228501
The Chorus, Ancient and Modern: Forms of Communal Performance and the Body Politic
Sapsford, Thomas D
Fall 2022
This course investigates a particular form of cultural institution developed in ancient Greece, the chorus. It begins by exploring how the ancient chorus both praised and questioned the political systems that facilitated it before considering how choral performance in the modern period has been an effective tool for propaganda, revolt, and riot. Alongside works by ancient Greek poets, students look at a range of modern performance genres such as opera, ballet, sporting ceremonies, Broadway musicals, and flash mobs. Students also gain experience of communal performance themselves through participation in a series of practical movement and singing workshops.

CLAS332001
Roman Civil War Literature
Thatcher, Mark R
Fall 2022
As soon as the Romans conquered an empire, they began tearing it apart, fighting a series of civil wars that ushered in a new imperial system. How did the Romans understand the experience of brother fighting brother? How did generals like Caesar and Augustus justify fighting their fellow Romans for their own gain? How did Roman poets use myth to explain the Romans' special curse of civil war? This course explores the theme of civil war in Roman literature, by reading in Latin selections from a series of texts--including Caesar's Civil War, Cicero's letters, Augustus' Res Gestae, Horace's Odes, and Vergil's Aeneid--in the historical and cultural context of Rome in the first century BC.

CLAS333401
Senecan Tragedy: Medea Nunc Sum
Sapsford, Thomas D
Fall 2022
As Senecas Medea wrestles with committing the ultimate act of vengeance, the murder of her own children, she recognizes that she has become the figure she was always destined to become and simultaneously acknowledges her mythic and literary pedigree. In this class students will read Senecas tragedy Medea in Latin, comparing this imperial Roman portrayal of the Colchian sorceress to her earlier Greek incarnations and examining the elemental force of her anger through reading portions of Senecas philosophical treatise De Ira. In addition, students will also explore the place and history of tragedy as a performance genre in Neronian Rome and get the chance to create their own performance excerpts of this dramatic text.

CLAS338201
Herodotus I
Eshleman, Kendra J
Fall 2022
Father of History, Father of Lies, Herodotus marks the beginning of the Greco-Roman historiographic tradition. In this class, we will read portions of books 1 and 8 of the Histories in Greek, and sections of the rest of the work in English. Central issues will include the nature, methods, and principles of Herodotean historiography, his relationship to earlier poetic and prose traditions and to the intellectual and political climate of the fifth century BCE, and social, cultural, political issues raised by the work, and the historical events it chronicles--especially, but hardly limited to, the Persian Wars.

**Spring 2023**  
To what kinds of life and culture do great cities give rise? Founded in 1703 by Peter the Great on the barely inhabited headwaters of the Neva river, St. Petersburg quickly became one of Europe's great modern cities and the site of several artistic and political revolutions. Torn between utopian aspirations and earthly realities, heaven and earth, Petersburg fascinated several of Europe's greatest authors: among them Pushkin, Gogol, Dostoevsky, and Bely. This course will survey the history and culture of St. Petersburg, including its fine arts and fabulous music, while concentrating on literary expression and social and philosophical reflection about the meaning of St. Petersburg for Russian and beyond.

CLAS220501
Greek History
Thatcher, Mark R
Spring 2023
A study of the history of Greece from the Bronze Age in the second millennium BCE to the preeminence of Alexander of Macedon in the 4th century. The course will focus on such broad topics as the development of Greek social and political institutions, notions of justice, freedom, and Greek identity, relations among Greek city-states and with foreign nations, imperialism, the golden age of Greek literature, and the rise of Macedonian monarchy. Emphasis will be on the study of the ancient sources: literary, historiographic, archaeological, and epigraphic.

CLAS220801
Art and Myth in Ancient Greece
Hoffman, Gail L
Spring 2023
An introduction to the visual representation of the Greek gods and goddesses and to the artistic depiction of the primary cycles of Greek legends (e.g., the Trojan War and heroes such as Herakles, Perseus, and Theseus). This course focuses on how specific visual attributes serve to identify mythological characters and how the development of narrative in Greek art helped to relate their stories. Inquiring into the use of mythological imagery to decorate temples, cult statues, and vases used primarily for the symposium (male drinking parties), we will consider the functions of mythological imagery within Greek society.

CLAS224001
Dangerous Women in Classical Literature
Eisenfeld, Hanne E
Spring 2023
Demeter sticks a baby in the fire, Amazons cut off one breast and live far away from men, Clytemnestra kills her husband in his bath. In this course we will investigate how Greeks and Romans used stories about female figures - goddesses, monsters, and humans - as a way of talking about a range of conflicts, tensions, and fears. While we focus on the ancient world, we will also look at how these figures are used in later periods and think about which stories we tell about women - and why.

The Romans lived in a world full of gods; religion affected every part of Roman life, from politics to warfare to entertainment. Christianity took shape within this world, and Roman religion, especially the mystery cults, has often been regarded as a model for the early church. Yet the Roman concept of 'religion' has very little in common with modern, Judeo-Christian-influenced notions. In this class we will explore the theory and practice of religion in the ancient Roman world, as reflected in ancient literary texts, as well as in epigraphic and archaeological evidence. Themes include the nature of Roman worship, from state cult to magic and mysteries, the interplay between religion and politics, and the development of Christianity in its pagan context.

Under rule by the Ptolemaic dynasty, Egypt became the cultural hub of the ancient Mediterranean; when governed by Rome, it provided natural resources to a vast empire. But what of its multiethnic and multilingual population (the indigenous Egyptians, Nubians, Jews, Romans, Greeks, Arabs who inhabited it) and how did Egypt in this period relate to the rest of Africa and neighboring ancient civilizations? By studying literary, documentary, and visual sources, we will examine several fascinating historical figures such as Alexander the Great, Ptolemy Philadelphus, and perhaps the most notorious woman in antiquity, Cleopatra VII. Students will also encounter first-hand evidence of daily life in this region through letters, contracts, petitions, and arrest warrants recorded on potsherds and papyri and preserved for millennia by the desert sands.

**CLAS331501**  
**Homer: Epic Power Plays**  
**Eisenfeld, Hanne E**  
**Spring 2023**  
Power dynamics are complicated in early Greek epic. Who gets to boss gods and heroes around? Is anyone in charge? How are conflicts supposed to be resolved when everyone is divine, semi-divine, or, at the very least, royal? How do these epic figures handle big emotions like grief and rage? In this course we will see Demeter and Zeus go head-to-head in the Homeric Hymn to Demeter and witness the overlapping fights between Achilles and Agamemnon and Zeus and Hera in Iliad 1. At the end of the term we will examine the relative calm of Iliad 24 as gods and humans find their way into (temporary) agreement in one of the most beautiful moments of Greek literature.

**Credits:** 3

CLAS334001
Latin Pastoral Poetry
Polt, Christopher B
Spring 2023
A century of becoming a global empire and a generation lost in civil warfare drove Roman poets of the late first century BCE into the arms of pastoral, a fantasy genre sparsely inhabited by shepherd who spent their days singing of love and roaming idyllic landscapes. We will read in Latin two contemporaneous pastoral texts--the Eclogues of Vergil and Elegies of Tibullus--as we try to understand what this fictional countryside offered Rome's most urbane writers.

CLAS334201
Livy
Eshleman, Kendra J
Spring 2023
In the last two decades, the study of the Augustan historian Livy has undergone a renaissance. Once scorned as a dull compiler and apologist for the Augustan regime, Livy is now recognized not only as a masterful stylist but also as a subtle and challenging thinker. In this class, we will focus on his history of early Rome, reading portions of books 1 and 5 in Latin, and other selections from the first pentad in English. Major themes will include women, religion, and political power in the *Ab Urbe Condita*, the relationship between Livy's work and the Augustan principate, Livy's methods as a historian, and the larger, related problems of the character of ancient historiography and our knowledge of early Roman history generally.

CLAS420301

Everyday Aphrodite: Classics and the History of Sexuality
Sapsford, Thomas D
Spring 2023
This course investigates how the language and culture of ancient Greece and Rome has shaped many of our contemporary ideas on sexuality in the US. Students explore the role of Greco-Roman material in discourses of sexual identity, freedom, and oppression from the first scientific studies of sexual behavior in the late nineteenth-century to notions of sex, gender, and sexuality in the modern day. Throughout the course students analyze both ancient and modern texts to see how classical culture has acted as an explanatory force in the fields of medicine, psychology, law, and politics. Students also explore how marginalized groups, especially LGBTQI peoples, have used Greco-Roman antiquity as a means both for forming community and for arguing equal rights.

CLAS428001

Beast Literature
Polt, Christopher B
Spring 2023
From Mother Gooses fairy tales to lolcats, we imagine animals often speaking as we do. But what are we saying when we use animals to talk with and about one another? And what does literature featuring articulate animals say about our attitudes towards humans, animals, and the lines we draw between them? This course explores beast literature in its various forms (fable, comedy, the novel, epic, debate poetry, etc), examining its incarnations through ancient Greece and Rome, Medieval Europe, and the modern world.

Sports, Media, Culture
Ellis, Matthew L
Summer 2022
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

Broadcast and Digital Communication
Caswell McCarron, Christine
Summer 2022
Satisfies one of three elective courses required within the Communication major. This course introduces the student to a broad sampling of broadcast and digital writing styles utilized across many industry platforms. Areas of focus include news, sports, documentaries, commercials and public service announcements, educational television, and writing for specialized audiences. The theories, ethics and practices of this genre of communication will be introduced as well as interview methods and techniques. Case studies and practical assignments complement classroom discussions. Instructor is an industry veteran with expertise in how to apply classroom theory to practice.

COMM227801
Social Media
Erol, Ali E
Summer 2022
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. This course explores the history, development and use of social media. It connects to the liberal arts and the digital humanities through the lens of social justice. It will build a foundation of knowledge about social media with project-based research. The course identifies the established disciplinary fields of the humanities such as philosophy, literature, culture, religion, art, music, history, politics and language in comprehending the world, using these fields as a foundation with which to critically explore various modes of expression, ideas and values in social media about social justice. Students will have the opportunity to identify contemporary issues in social media in projects that reflect critical thinking goals.

Do you ever wonder what toll social media might be taking on your mental health? Do you long to 'break up' with your phone and live in the moment? This one-credit (pass-fail) seminar examines student anxieties about technology habits and experiments with practices of mindfulness. The course orients you to think and act more purposefully as a 'whole person'--in keeping with the Jesuit ideals of attentiveness and character formation--as opposed to one who is screen-dependent. Short readings, fun viewings, meditative journal entries, and small-class discussions will focus on the social, psychological, and emotional consequences of digital experiences (including friendships, learning, privacy, dating, and so on). Students will also set one #goal per month, of their own choosing, to try to live differently with their tech habits--self-examining how that change feels and what insights emerge.

COMM190201
Digital Storytelling
Reynolds, Paul A
Fall 2022
Storytelling is an essential part of every community, organization, and business. However, the channels through which stories are told have evolved. With the advent of the internet, digital media now combines tradition with technology. Narratives can be told in new, multidimensional ways with video, audio, blogs, text, images, and graphics. The purpose of this course is to help you understand why communication professionals and, moreover, civilizations throughout human history create and value stories. You will also learn how to employ a variety of digital technologies to create compelling content. This will be achieved through examining the underlying concepts and technical processes involved in telling stories for delivery on the desktop, the mobile device or tablet. This is a one-credit pass/fail course.

Fall 2022
Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

COMM218201
Black Popular Culture
Kizito, Kalemba
Fall 2022
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In this class, we will critically examine the development of black popular culture from blackface minstrelsy in the 1800s to present day. While we will primarily focus on black popular culture in the United States, we will also consider the work of diasporic authors and artists and the international implications of American media. Readings will draw upon theories and concepts in media studies, cultural studies, and rhetoric to center our discussion of black popular cultural texts such as television shows, films, music, poetry, and fashion.

COMM218401
Sports, Media, Culture
Serazio, Michael J
Fall 2022
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

COMM220201
New Ways of Seeing: Museum Art in Visual Culture
Breen, Marcus J
Fall 2022
This course offers students a way to develop critical knowledge and skills in intersecting areas of concern to communication scholarship and research. These areas are: communication and media theory, visual culture, art museum practice, video production and distribution. Students will read and discuss two key texts, using them as a basis for interrogating art theory and practice at BC's McMullen Art Museum. While developing their knowledge of media and communication theory, students will have the opportunity to explore how new media, social media (especially visual/video tools) offers opportunities to explore and elaborate on new ways of seeing art and its role in society. This is a one credit course.

COMM220301
Image as Communication
Berger, Kenneth
Fall 2022
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. The goal of this course is to study how images are formed while exploring the ways in which they are being used to communicate. Following the critical tradition that treats images as a static representation all the way to recent studies that focus on writing with images in the era of interactive media, we will read critical texts while exploring concrete examples taken from books, political posters, films, and social media. What is the relation between text and image? What are the politics of image making? How do images change through different national and cultural settings? And how does the materiality of images define the way we make sense of them? From Walter Benjamin, John Berger, Malcolm Turvey to Noigandres and Laura Mulvey to Harun Farocki we will try to answer some of these questions while looking at concrete examples. We will watch and analyze multimedia productions, read texts, and discuss visual representations from a variety of visual and textual sources. Class and readings in English, audiovisual materials in English and/or with English subtitles.

COMM221601
Growing Up Gendered: Contemporary Media Representations
Cuklanz, Lisa M
Fall 2022
This course explores how conventional and unconventional views of feminine and masculine behaviors for children, adolescents and adults have been circulated in current popular culture through television, film, and advertising over the past two decades. Starting with an examination of children's media, the course will examine how different theorists and popular media have created and analyzed patterns of representation related to gender, identity, and cultural expectations. Throughout the course we will explore how the categories of gender and sexuality intersect with other dimensions of individual identity such as race, class, and religion. The course will examine a range of commonly gendered themes in popular culture, including sports culture, girlhood, eating disorders, consumerism, romance/bromance, and gendered violence.

COMM222101
Digital Media Field Production
Howley, Richard J
Fall 2022
Satisfies one of three electives required for the Communication major. With the ubiquitous nature of video streaming on desktops, mobile phones and tablets, the influence of video storytelling has never been greater or more pervasive and the demand for skilled digital storytellers to fill those increasingly ubiquitous screens is stronger than ever. This course offers professional guidance and hands-on experience to develop the skills, techniques and disciplines necessary for the creation of digital media produced in the field. Students will write and produce their own video programs, becoming familiar with all aspects of production and post-production, including producing, performing, directing, single-camera shooting, sound recording, and location lighting, as well as editing, digital effects, and graphics. In the process, students will develop a discerning eye for what makes an effective, professional, aesthetically pleasing video production, while they build a portfolio that can be used during job or graduate program interviews.

**COMM222201**  
**Studio Television Production**  
**Reynolds, Paul A**  
**Fall 2022**
Satisfies one of three elective courses required within the Communication major. This course is designed to introduce students to the theories, tools, and techniques of television production. The focus of this class is on developing the production skills necessary for creating effective television communication. To pursue this goal, students will combine the information from the course's texts with practical experience in the form of exercises and the creation of their own television programs. While producing and directing their programs, students, working in crews, will learn to operate studio television equipment and develop an understanding of how messages are communicated using "live" or "live-on-tape" production methods.

**COMM222401**  
**The Ideal of the Open Mind**  
**Ingram, Brett D**  
**Fall 2022**
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In an age of polarized politics, it is immensely difficult to keep an open mind in public debate. Convinced that our side is right and the other wrong, we readily retreat to our respective corners, rally our allies, and prepare to outvote or shout down our opponents. But insofar as we remain committed to democratic deliberation, we must try to understand our fellow citizens and make the attempt to persuade them. To bring our fellow citizens around to our way of seeing things, we have to first understand where they’re coming from, which means keeping an open mind. In this course, we will address the meaning of the open mind as it bears upon political rhetoric and communication, moral debate, and the study of culture. Questions we will address include: is political rhetoric invariably a form of manipulation and deceit, or is it a way of persuading people by appealing to them from within their own perspectives? Can tradition be a source for reform? To what extent have the most radical reforms in American history drawn upon tradition versus left tradition behind? To address these questions, we will examine and assess the ideal of the open mind as it has emerged in the Western philosophical tradition from Plato and Aristotle to the present.

COMM224701
Covering Sports in the Digital Age
Cotillo, Christopher G
Fall 2022
Satisfies one of three elective courses required within the Communication major. This course will introduce students to the theoretical and practical elements of covering sports in the age of digital media convergence. Taught by an experienced practitioner, the class will both review the history of sports media and offer students the opportunity to produce original creative work suited for online distribution. Topics will include journalistic ethics, social media strategies, social justice in sports coverage, and the practicalities of reporting and story construction. Students will be evaluated both via exams and through the submission of a creative portfolio.

COMM225801
Cinematic Futures
Ellis, Matthew L
Fall 2022
Satisfies one of three required electives within the Communication major. This course considers film as an artistic means to explore visions of the future, while assessing cinemas standing in today's changing digital multimedia landscape. Framing these questions with historical and theoretical scholarly and popular texts, we will probe cinema's tendency to displace contemporary anxieties into the future. By watching films from a range of time periods, we will reassess our present moment and ask what futurocasting tells us about the human condition.

COMM226501
Theory, History and Practice of Talk Media
Citorik, Christopher
Fall 2022
Satisfies one of three elective courses required within the Communication major. This course offers an overview of the historical, theoretical, and practical elements of American talk media from the dawn of broadcasting to today. Beginning with early U.S. radio, the class considers the ways in which economics, politics, technology, and culture have shaped American public discourse. The course concludes by giving students an opportunity to produce their own podcast, teaching skills that will allow them to not only create professional content, but also to understand better the communication history and theory they have studied throughout the semester.

**COMM227801**  
**Social Media**  
**Peterson, Kristin M**  
**Fall 2022**  
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. This course explores the history, development and use of social media. It connects to the liberal arts and the digital humanities through the lens of social justice. It will build a foundation of knowledge about social media with project-based research. The course identifies the established disciplinary fields of the humanities such as philosophy, literature, culture, religion, art, music, history, politics and language in comprehending the world, using these fields as a foundation with which to critically explore various modes of expression, ideas and values in social media about social justice. Students will have the opportunity to identify contemporary issues in social media in projects that reflect critical thinking goals.

**Credits:** 3

**Satisfies Core Requirement:** None
COMM228401
Jewish Media, Arts, and Culture
Sienkiewicz, Matthew S
Fall 2022
Satisfies one of three elective courses required within the Communication major. This course looks at current trends in Jewish cultural creativity, considering both diasporic and Israeli film, television, literature, and visual arts. Designed for students with limited knowledge of Judaism and Jewish culture, the class surveys Jewish religious practice, political history, and traditions of cultural expression as it examines media sources that embody, advance, and grapple with ideas from the Jewish past and present. Topics include, but are not limited to, Jewish comedy, Jewish children's media, Jewish memory, the globalization of Israeli television, and Yiddish language media.

**COMM336201**

**Film Theory and Criticism**

**Pastel, Renee L**

**Fall 2022**

Satisfies the required theory course in the Communication major. This course is structured around the question of how visual media convey and influence the world in which they are created. By surveying some of the major questions raised by theorists from the beginnings of film as a medium to the present, students will gain critical lenses through which to historically and theoretically engage visual media. We will cover topics including: film aesthetics; Marxist, psychoanalytic, feminist, critical race, and queer theoretical approaches to film criticism; television studies; and new media theories. Students will learn how to analyze film on a formal level, taking into account how form creates meaning, and to think historically and theoretically about how film as art and commerce has contributed to shaping "smaller screen" media forms and understandings.

**Credits:** 3

**Room and Schedule:** Gasson Hall 204 MW 03:00PM-04:15PM

Critical Theory
Ingram, Brett D
Fall 2022
Satisfies the required theory course in the Communication major. This course investigates and critiques the many ways that social, cultural, and political power is consolidated, negotiated, or resisted through popular media. We will read an assortment of theoretical approaches and primary texts (including those drawing from Marxist, ritual, semiotic, psychoanalytic, and functionalist traditions, among others) and apply them to ideological norms in society surrounding gender, race, class, violence, and the body. Looking at both the structural constraints in the production process of advertising, television, film, and social media, and the interpretive agency of audiences, our targets for analysis will be wide-ranging and contemporary.

COMM442901
Globalization and the Media
Breen, Marcus J
Fall 2022
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. This class examines the cultural impact of globalization on the traditional centers and peripheries of media production. The course will cover topics such as the shifting definitions of cultural imperialism; the role of the United Nations in regulating cultural products; the latest transnational media mergers; the strategies of global television programmers such as CNN, MTV, or Discovery; the increasing commercialization of media systems around the world; and the role of media in relation to war and terrorism. This writing-intensive seminar is open to juniors and seniors.

COMM443101

Religious Expression in the Digital Age

Peterson, Kristin M

Fall 2022
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. This writing intensive seminar examines religious expression within the current digital moment of social acceleration, infinite interconnections and expanding cultural spaces. Recent surveys show that while Americans are less affiliated with institutional religions, they still seek spiritual meaning and connections. This course explores how the digital age offers new opportunities for religious expression as well as challenges to traditional religious authorities. Students will discuss emerging theories on digital media and the intersections of media and religion. In order to critically examine the representation of religion in digital media spaces, students will engage with contemporary case studies, such as meditation apps, Neopagan online rituals, Muslim fashion gurus on Instagram, spirituality podcasts, Evangelical Christian "mommy" blogs, Jewish dating sites and the Pope's Twitter feed. This course is a writing intensive seminar with a required twenty five page research paper.

COMM444201
Intercultural Communication
Breen, Marcus J
Fall 2022
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. This course studies communication as it relates to society and as it occurs inter-culturally and internationally. In those contexts, questions and issues will be pursued which reveal processes, effects, methods, and critical norms for evaluating interpersonal, group, and mass communication.

Credits: 3
Room and Schedule: St Mary's Hall 460S TuTh 10:30AM-11:45AM
Satisfies Core Requirement: Cultural Diversity
Prerequisites: None
COMM444801
Television Criticism
Sears, Anne, Phd
Fall 2022
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. This course provides students with methods for critically evaluating the cultural and social impact of television. First, students learn some fundamentals of television production and the structure of the media industry. Based on this knowledge, students examine and practice the critical analysis of contemporary television programs. The goal of the course is to make students more informed critics of our television-saturated age.

COMM444901
Crisis Communication
Fishman, Donald A
Fall 2022
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.. This course is designed to examine events and situations that potentially threaten the viability of an organization. Attention is devoted to developing an effective crisis communication plan, speaking to multiple stakeholders, decision-making under pressure, and resolving--rather than litigating--organizational problems. Among the studies examined are the Tylenol product tampering incident, the Exxon Valdez accident, the Union Carbide gas leak, the Challenger Space Shuttle disaster, the Three Mile Island accident, and the Pepsi syringe hoax.

Gender Representation and Communication
Cuklanz, Lisa M
Fall 2022
Satisfies one of two writing intensive course requirements within the Communication major. Restricted to Juniors and Seniors. This course is both a writing-intensive seminar and a Women's and Gender Studies minor course. Focus is on the social construction of gender through communication. The early section of the course compares historical and theoretical approaches to representations of gender in communication texts. Then, building on these comparisons, students read about, examine, and analyze texts, focusing particularly on television programming and advertising.

COMM445201
News Media/Democracy
Serazio, Michael J
Fall 2022
The press plays an essential role in America and the world. This course aims to equip students to become critical news consumers with both a skilled understanding of how journalism works and political literacy about the big issues of our time. Through classic scholarly reflections as well as contemporary punditry examples, we will tackle the news media critically across three dimensions: learning about its indispensable function in mediating politics and democracy throughout history and today; studying and practicing the craft of opining writing and social advocacy; and evaluating and critiquing the performance of the press across these fronts.

COMM447001
Communication, Capitalism, Consumerism
Erol, Ali E
Fall 2022
Satisfies one of two required writing-intensive courses for Communication majors. This writing-intensive course explores the complex relationships between rhetorics, representations, and constructions of consumption and production within the capitalist political economy. Looking at theoretical as well as historical texts about the development of production practices in the US, the course takes a comprehensive as well as a critical look at the complex web of relationships between political-economic structures and symbolic systems that sustain or challenge it. Taking urbanization and farming as its main case study, the course explores the histories, the representations, the politics, and the poetics of how food travels from a seed in a farm to our fridges, to a meal on our tables in our homes, in our dining halls, and in our food pantries. Examining the effects of settler colonialism, slavery, patriarchy, climate change, imperialism, and capitalism on food production and consumption, this course traces the how as well as the why of what we eat today. Additionally, the course delves into various examples of alternative food systems that have existed and still exist in the U.S. and encourages students to think critically about not only the consumption of the food they eat, but also its production, representation, and rhetoric.

Children and the Media
Hogan, Lindsay R
Fall 2022
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. From film to television to mobile apps, this course examines children's media as an economic, cultural, and political entity and explores the relationships among young people and the contemporary media environment. Students will analyze various scholarly approaches and major debates in the study of children and media while also learning the larger historical contexts of those debates. This course offers a critical/cultural approach that examines the ways in which media industries, institutions, technologies, and texts intersect to produce particular media practices and considers how such practices relate to the production of cultural norms or social power.

COMM558901
Senior Internship Seminar
Caswell McCarron, Christine
Fall 2022
This course may not be repeated. Satisfies one of three elective courses required within the Communication major. This course gives senior communication majors an opportunity to pursue a 15-20 hour per week internship in a specific field of Communication. Practical experience will be supplemented by discussions of relevant theoretical constructs. Periodic discussion group seminars will enhance a student's immersion in the industry. Adherence to professional protocol is expected. A field research paper is required as well as supervisor evaluations. This course counts as a 3-credit Communication elective.

**Survey of Mass Communication**

Hogan, Lindsay R

Spring 2023

Required course for all Communication majors. This course will introduce you to the basics of the field, including industries, industry trends, regulations, and ethics. It will address historical developments that have shaped the mass media, particularly through the rise of newspaper, book, music, radio, television, film, advertising, and public relations industries. It will consider the influences of new media and their impacts on culture and industry. It will explore topics such as blockbusters, globalization, digital photography, social media, sports, “fake news,” fans and fan cultures, and media violence. Further, it will ask you to consider your position as a media consumer.

Translating Theory to Practice  
Hogan, Lindsay R  
Spring 2023  
This is a one-credit Pass/Fall course. As a Communication student at Boston College you have been, and will continue to be, provided with numerous opportunities to learn about communication at both theoretical and practical levels in multiple areas within our discipline (e.g., media, rhetoric, culture, gender, health, interpersonal, family). The objective of this course is to assist in you in discerning how your education in the field of communication will prepare you to ask and eventually answer questions about your life, vocation, and role in the lives of others. Each week, a Communication department faculty member or guest speaker from the professional world will address a topic relevant to students on the precipice of entering the workforce, including (but not limited to): how to discuss academic research in language that resonates with employers in fields such as public advocacy, broadcasting, advertising, public relations, and consulting; whether/how to pursue graduate study; and how to present your self in job applications and interviews.

Do you ever wonder what toll social media might be taking on your mental health? Do you long to 'break up' with your phone and live in the moment? This one-credit (pass-fail) seminar examines student anxieties about technology habits and experiments with practices of mindfulness. The course orients you to think and act more purposefully as a 'whole person'--in keeping with the Jesuit ideals of attentiveness and character formation--as opposed to one who is screen-dependent. Short readings, fun viewings, meditative journal entries, and small-class discussions will focus on the social, psychological, and emotional consequences of digital experiences (including friendships, learning, privacy, dating, and so on). Students will also set one #goal per month, of their own choosing, to try to live differently with their tech habits--self-examining how that change feels and what insights emerge.

Digital Storytelling
Reynolds, Paul A
Spring 2023

Storytelling is an essential part of every community, organization, and business. However, the channels through which stories are told have evolved. With the advent of the internet, digital media now combines tradition with technology. Narratives can be told in new, multidimensional ways with video, audio, blogs, text, images, and graphics. The purpose of this course is to help you understand why communication professionals and, moreover, civilizations throughout human history create and value stories. You will also learn how to employ a variety of digital technologies to create compelling content. This will be achieved through examining the underlying concepts and technical processes involved in telling stories for delivery on the desktop, the mobile device or tablet. This is a one-credit pass/fail course.

**Spring 2023**

Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

**Credits:** 3

COMM218001
Masculinity, Sexuality, and Difference
Ingram, Brett D
Spring 2023
Satisfies Critical Issues Course requirement for the class of 2021 and beyond. This course will examine constructions of masculinity and sexuality in Western society from a critical cultural perspective. We will consider the ways in which cultural narratives about acceptable masculine behaviors and attitudes catalyze social conflicts, reinforce established power hierarchies, and organize the modes of being available to people of different gender identities and sexual orientations. We will also evaluate the liberatory potential of emergent discourses and practices that seek to cultivate greater acceptance of diversity, and promote social healing. There will be a concentrated focus on popular cultural forms (especially television, film, music, sports, and social media) that are particularly influential to contemporary men and boys.

COMM218101
Gender, Identity, and Sexuality
Barko, Emily B
Spring 2023
Satisfies one of three elective courses required within the Communication major This course offers an introduction to the field queer media studies, focusing on several key genres, directors, and themes within transnational queer media cultures and scholarship. Well explore what makes a particular film or television program "queer" and what role media production, distribution, exhibition, and reception play in the process. Well examine constructions of sexuality, gender, race, and nation in a variety of texts and contexts, and investigate how transnational queer media can both participate in and resist dominant notions of sexuality, imperialism, race, gender, politics, and community.

COMM218401
Sports, Media, Culture
Kim, Kyoung-yim
Spring 2023
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

COMM221301
Fundamentals of Audio I
Schwartz, Judith E
Spring 2023
Satisfies one of three elective courses required within the Communication major. This course is designed to introduce the student to the multifaceted world of sound, in theory and practice. Topics covered include the history of recording techniques, design and use of microphones, and careful listening techniques. The course will present an overview of current audio production software typically used in modern recording studios. Students will work in the audio labs to create professional quality pieces and will take home a portfolio of work at the end of the semester.

Studio Television Production
Howley, Richard J
Spring 2023
Satisfies one of three elective courses required within the Communication major. This course is designed to introduce students to the theories, tools, and techniques of television production. The focus of this class is on developing the production skills necessary for creating effective television communication. To pursue this goal, students will combine the information from the course's texts with practical experience in the form of exercises and the creation of their own television programs. While producing and directing their programs, students, working in crews, will learn to operate studio television equipment and develop an understanding of how messages are communicated using "live" or "live-on-tape" production methods.

COMM223501
Communicating Politics
Fennimore, Jillian
Spring 2023
This course takes both a theoretical and practical approach to the art of political communication. Taught by an instructor with extensive field experience, the class surveys major historical trends in campaign advertising, policy messaging, and media relations. It then considers the modern world of political communication, offering an up-to-the-minute assessment of major trends in the field. Students have the opportunity to develop their own skills and portfolios by creating original political advertisements, social media campaigns, policy speeches, and more. The course features a number of notable guest speakers, including active politicians, candidates, and campaign managers.

**COMM224001**  
**Memory and Media**  
**Pastel, Renee L**  
**Spring 2023**  
Satisfies one of three electives courses required within the Communication major. This course focuses on the relationship between memory and moving images. How can film, television, and online video capture and reproduce memory? What role can moving images play in shaping memory, both on an individual and collective level? What claims does the medium make about accurately presenting the past? Through close analysis of film, television, and digital media, we will practice making textually-grounded arguments about specific works while thinking about the broader implications for understanding media and memory. Drawing on material from a variety of time periods and genres, we will use moving images to explore how remembering (and forgetting) shapes a narrative, both on and off the screen.

**Credits:** 3  
**Room and Schedule:** Gasson Hall 209 MW 03:00PM-04:15PM

Satisfies one of three elective courses required within the Communication major. With the advent of the iPhone in 2007, and Android mobile devices shortly thereafter, came the smartphone media revolution. Once the domain of high cost production studios and controlled distribution through a handful of television networks, digital storytelling is now in the hands of the average citizen. Today, nearly three billion smartphones offer extraordinary access to digital media creation and post production tools, as well as instant content distribution across increasingly faster, global networks. With this kind of once unimaginable access to media creation and distribution comes an urgency to understand this tsunami of digitally crafted and often manipulated communications. In this course, we will examine the various applications and impact of this new world of networked, media-rich, mobile devices, while getting hands-on experience actually crafting digital stories with little more than smartphones for video acquisition. While the cost of smartphone production can be virtually free, to create effective short form digital videos still requires some fundamental skills. To that end, students will learn how to plan, direct, shoot, and edit their own smartphone productions from how-to videos to short commercials, as well as advocacy spots, and political issues and candidate videos.

**Media Ethics in the Digital Age**

**Breen, Marcus J**

**Spring 2023**
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. *** Students that have taken COMM2250 Mass Communication Ethics may not take this course*** This course gives students an understanding of the ethical dimensions of communication in an accelerating digital world. Drawing on philosophical principles that resonate with Jesuit values, students will learn to identify, evaluate, and where possible interpret moral conflicts in the media and communication environment, in the media industry, and between the industry and the public. Rather than look at ethical conflicts strictly from a Western lens, the course introduces the students to a variety of philosophical and cultural models. Using a case study approach, the course addresses various contemporary ethical concerns, such as social media and mental health, misinformation, hate speech, extremist content, documentaries, alternative business models for journalism, international and cross-cultural issues, commodity activism, guerilla marketing, entertainment, privacy, doxing, and copyright.

**Theory, History and Practice of Talk Media**

Citorik, Christopher

Spring 2023
Satisfies one of three elective courses required within the Communication major. This course offers an overview of the historical, theoretical, and practical elements of American talk media from the dawn of broadcasting to today. Beginning with early U.S. radio, the class considers the ways in which economics, politics, technology, and culture have shaped American public discourse. The course concludes by giving students an opportunity to produce their own podcast, teaching skills that will allow them to not only create professional content, but also to understand better the communication history and theory they have studied throughout the semester.

COMM228301

Asian Americans in Sport and Society

Kim, Kyoung-yim

Spring 2023
In the mid-twentieth century, sport was a bastion of white supremacy, and it embodied such U.S.
national bodily ideals as white, heterosexual, Christian, muscular, and male. Histories of racial
exclusion, racist violence, gendered policing, and sexual regulations positioned African-
American men as outside the normative abilities of white men. In this respect, sport was a
microcosm of the racial nation, with the language of citizenship and racial resistance coded
within black-white discourse; however, this dichotomy failed to account for the long histories of
Asian Americans in the United States. Asian-American sporting cultures trouble the current
racial synchronicity between sport and nation while illuminating multiple performances of
"belonging." This course highlights the diversity of Asian-American communities and aims to
decipher how the ordinary practices of sporting cultures can offer extraordinary knowledge
about U.S. society.

**Communication Methods: Social Science**

**Wells, Celeste C**

**Spring 2023**

One of COMM3330 or COMM3340 is required for the Communication major. This course is
designed to introduce students to social scientific methods in Communication research. Among
the topics emphasized are: (1) development of questions and hypotheses, (2) quantitative
and/or qualitative data collection methods (e.g., experiments, interviews, and surveys), and (3)
data analysis and interpretation (e.g., interpretive and statistical analysis). The objective of the
course is to provide students with the resources to interpret, evaluate, and conduct research in
Communication from a social science perspective.

Communication Methods: Honors
Peterson, Kristin M
Spring 2023
Open to students in departmental honors. This course is an honors introduction to research methods used in communication research. Students will learn how to ethically conduct research; develop a working knowledge of the IRB and associated requirements; learn the process of creating a compelling research question/hypothesis; acquire the skills necessary to gather and analyze data; and write initial scholarship regarding their potential thesis project. Overall, this course will create a strong foundation for students who will conduct their own research. Students will demonstrate their understanding of the material as well as their ability to apply the material through exams, a research project, an oral presentation, and daily participation.

Difference is a fact of the human condition. What do we learn about ourselves and Others in relational encounters marked by difference? Differences can divide communities, societies, countries and perpetuate violence and suffering. Yet, if faced with courage, integrity, and inquiry, these same differences can lead to authentic connections that benefit individuals and their societies. Effective communication requires study and practice, intense intellectual focus, and genuine emotional exploration. **Satisfies the required theory course in the Communication major**

Critical News Studies
Sears, Anne, Phd
Spring 2023
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. What is news? We will examine the deceptively simple question, paying attention to historical shifts in news organizations, journalistic practice and process, technological forms and sociocultural patterns. We will dissect visual and textual features of news, consider how events become newsworthy, analyze journalistic work routines, identify framing devices, public agendas, editorial power and audience relationships. Topics include climate change, immigration, mass violence and representation. Studying how news works and model of how it can be made differently gives us a guide for navigating news in our personal and professional lives.

Film, Video and Everyday Life
Berger, Kenneth
Spring 2023
This course satisfies one of two writing intensives required within the Communication major. Restricted to Juniors and Seniors. This course will examine how film and video have been used to depict, confront, contest and reimagine everyday life over the last century. Beginning with early cinema and proceeding chronologically, we will look at various forms of moving image production, including documentary, Hollywood narrative, experimental film and video, live television, animation, and new media. As we do, we will supplement our analysis with different accounts of modern and contemporary life, concentrating in particular on theories that foreground the cultural and political forces that influence and mediate social existence. In turn, we will attempt to develop a critical and historical framework for understanding the diverse ways that film, video, and related media reflect, reshape, challenge, or otherwise respond to the conditions and experiences that define everyday life.

COMM446601
Surveillance, Media and Contemporary Society
Kizito, Kalemba
Spring 2023
What is surveillance and how are surveillance technologies altering contemporary life? This course will explore this question by mapping the complex ways that media and digital technologies are used to acculturate us and generate acquiescence/resistance to surveillance in society. We will use film, television, and Internet media along with assigned readings to develop critical perspectives on surveillance and surveillance practices. The class is designed to give you freedom to develop and express your own ideas on the costs and potential benefits of surveillance-based societies. **This course satisfies one of two writing intensive courses required within the Communication Major.**

**Credits:** 3  
**Room and Schedule:** St Mary's Hall 460S TuTh 01:30PM-02:45PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** None  
**Corequisites:** None  
**Cross-listed with:** AADS4466

COMM447101
Children and the Media
Hogan, Lindsay R
Spring 2023
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. From film to television to mobile apps, this course examines children's media as an economic, cultural, and political entity and explores the relationships among young people and the contemporary media environment. Students will analyze various scholarly approaches and major debates in the study of children and media while also learning the larger historical contexts of those debates. This course offers a critical/cultural approach that examines the ways in which media industries, institutions, technologies, and texts intersect to produce particular media practices and considers how such practices relate to the production of cultural norms or social power.

Open to students in departmental honors. Satisfies one of two writing intensive courses required within the Communication major. This course is an honors-level introduction to communication research and scholarship. This course will move beyond the initial concepts explored in research methods and required survey courses in order to prepare students to conduct their thesis research. Students will demonstrate their ability to apply the material through exams, oral presentations, daily participation and the completion of a 25 page thesis prospectus.

COMM490101
Readings and Research--Communication
Erol, Ali E
Spring 2023
This course is intended to provide an opportunity for students to explore topics not currently covered in the curriculum. Students will work on a specific research project under the supervision of a faculty member. The defining characteristics of the course are that (1) it must involve extensive readings and (2) it must include a formal term paper of twenty or more pages.

Credits: 3
Room and Schedule: BY ARRANGEMENT
Satisfies Core Requirement: None
Prerequisites: And completion of the five introductory required COMM courses. or Permission of Department
Corequisites: None

COMM550001
Debate Practicum
Katsulas, John P
Spring 2023
Advanced discussion of argumentation theory and debate practice with an emphasis on contemporary intercollegiate debate.

Credits: 1
Room and Schedule: St Mary's Hall S360 W 07:00PM-09:20PM
Satisfies Core Requirement: None
Prerequisites: Participation on the intercollegiate debate team and permission of the instructor or Permission of Department
Corequisites: None
COMM558901
Senior Internship Seminar
Caswell McCarron, Christine
Spring 2023
This course may not be repeated. Satisfies one of three elective courses required within the Communication major. This course gives senior communication majors an opportunity to pursue a 15-20 hour per week internship in a specific field of Communication. Practical experience will be supplemented by discussions of relevant theoretical constructs. Periodic discussion group seminars will enhance a student's immersion in the industry. Adherence to professional protocol is expected. A field research paper is required as well as supervisor evaluations. This course counts as a 3-credit Communication elective.

Credits: 3
Room and Schedule: By Arrangement
Satisfies Core Requirement: None
Prerequisites: Senior standing, six completed BC communication courses (including core requirements), and permission of the instructor. or Permission of Instructor
Corequisites: None

CSCI1101

Computer Science I
Kim, Minji; Marques Samary, Maira R
Summer 2022

Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

Credits: 3
Room and Schedule: On-line Asynchronous
Satisfies Core Requirement: Mathematics

Satisfies Core Requirement: Mathematics
CSCI110201
Computer Science II
Kim, Minji; Marques Samary, Maira R
Summer 2022

In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

CSCI227201
Computer Organization and Lab
Biswa, Anjum; Ji, Yuting
Summer 2022
This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

**Credits:** 4  
**Room and Schedule:** On-line Asynchronous

Computer Science Courses: Fall 2022

CSCI108001  
Principles of Computer Science  
Marques Samary, Maira R  
Fall 2022  
This is an introductory course for students with little or no programming experience. It is intended principally for students who will not be CS majors or minors, but it will help prepare students for future computer science courses if they wish to continue, and will enable them to use programming to solve problems in their field of study. The course presents an overview of the history, great principles, and transformative applications of computer science, as well as a comprehensive introduction to programming. Students will start with visual coding and later be introduced to Python. The course is based on the 'learning by doing' approach where active participation and pair programming are pillars of the course.

CSCI110001  
Gateway to Computer Science  
Muller, Robert  
Fall 2022
Gateway to Computer Science provides an introduction to the field of computer science for students with no coding experience and who may benefit from a review of the kinds of mathematical topics that tend to crop up in computing applications. An introduction to coding is a central theme of the course. Students will learn how to write applications that implement simple animations and games, digital audio and digital images. Gateway to Computer Science is an excellent preparatory course for the computer science introductory sequence CSCI1101 Computer Science 1 and CSCI 1102 Computer Science 2.

Fall 2022
In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

This is the honors introductory computer science course. The course is organized around three themes: (1) computation, as a subject of study, (2) coding, as a skill, and (3) computer science, as an introduction to the field. The first half of the course explores computation from a simple mathematical perspective. From this point of view, computing can be understood as a natural extension of basic algebra. Midway through, the course turns to a machine-oriented view, considering storage and processor architecture, mutation and mutation-based repetition idioms. The course explores a number of fundamental algorithms with applications in various disciplines. Good program design methodology is stressed throughout. The course is taught using the OCaml programming language. (OCaml is closely related to the JavaScript and Swift programming languages.) Students will be well prepared for the follow-up course CSCI 1102 Computer Science II. Students who are unsure about the fit should consult with Professor Muller.

**Credits:** 3  
**Room and Schedule:** 245 Beacon Street Room 125 TuTh 12:00 Noon-01:15PM  
**Satisfies Core Requirement:** Mathematics

CSCI210301

**Functional Programming**

Muller, Robert

Fall 2022
Functional programming is an important programming model that should be in every serious software developer's toolkit. The main goal of this course is to learn the functional programming paradigm. In the process, you'll develop a deeper understanding of computation and of software. The basic principles of functional programming underly the core of almost all high-level programming languages. Functional programs are naturally modular and robust, they're relatively easy to read, they're easy to manage and reason about. FP is often fun and often leads to elegant solutions. In this course we'll learn FP through the use of the OCaml dialect of the ML programming language. We'll study applications in several domains, including some fundamental algorithms and data structures, graphical animations and acoustics. We'll learn about polymorphic type inference, programming with sum types and pattern matching, and we'll study the use of imperative features within the FP paradigm. OCaml has a relatively simple evaluation model that facilitates reasoning about the correctness of programs. In our studies, we'll reason not only about the functional correctness of code, but also the space, time, and other resources used in a computation.

CSCI222701  
**Introduction to Scientific Computation**  
Levear, Duncan A  
**Fall 2022**
This is an introductory course in computer programming for students interested in numerical and scientific computation. Emphasis will be placed on problems drawn from the sciences. Many mathematical models of the behavior of complex natural systems have no closed-form solution, and computational modeling is needed for data exploration and to obtain approximate solutions. The course discusses different models and approximation methods, how to implement them as computer programs, and the factors that influence approximation quality. Topics include computer representation of floating-point numbers and data, computer program design and control flow, data visualization, nonlinear equations, systems of linear equations and least-squares, and Fourier analysis, with additional topics as time allows. Students will write programs in the Python programming language, primarily.

**Credits:** 3  
**Room and Schedule:** Fulton Hall 415 MW 10:30AM-11:45AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** MATH1101 or equivalent course(s) in differential and integral calculus with functions of one real variable.  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Periodically  
**Student Level:** Undergraduate

CSCI224401
Randomness and Computation
Bento Ayres Pereira, Jose
Fall 2022
This course presents the mathematical and computational tools needed to solve problems that involve randomness. For example, an understanding of random variables allows us to efficiently generate the enormous prime numbers needed for information security, and to quantify the expected performance of a machine learning algorithm beyond a small data sample. An understanding of covariance allows high quality compression of audio and video. Topics include combinatorics and counting, random experiments and probability, random variables and distributions, computational modeling of randomness, Bayes' rule, laws of large numbers, vectors and matrices, covariance and principal axes, and Markov chains.

Credits: 3
Room and Schedule: 245 Beacon Street Room 125 TuTh 01:30PM-02:45PM
Satisfies Core Requirement: None
Prerequisites: CSCI2243 Logic and Computation or Math 2216 Intro to abstract Math.

CSCI225701
Database Systems and Applications
Wyner, George M
Fall 2022
This course is required for Information Systems concentrators class of 2023 and earlier. It is being replaced by ISYS3350 for class of 2024 and later. This course provides in-depth coverage of database systems and their uses. Topics include database architecture, design strategies, SQL queries, security, performance, and using database tools and scripting languages to create sophisticated forms and applications, including web applications. The goal of the course is to give students the knowledge and skills to use databases effectively in any business situation.

Credits: 3
Room and Schedule: Fulton Hall 415 MW 03:00PM-04:15PM
Satisfies Core Requirement: None

CSCI226701
Technology and Culture
Griffith, William
Fall 2022
This interdisciplinary course will first investigate the social, political, psychological, ethical, and spiritual aspects of the Western cultural development with a special emphasis on scientific and technological metaphors and narratives. We will then focus on the contemporary world, examining the impact of our various technological creations on cultural directions, democratic process, the world of work, quality of life, and especially on the emergent meanings for the terms "citizen" and "ethics" in contemporary society. Students will explore technologies in four broad and interrelated domains: (1) computer, media, communications, and information technologies, (2) biotechnology, (3) globalization, and (4) environmental issues.

CSCI227101
Computer Systems
Aviram, Amittai F
Fall 2022
The goal of this course is to help you become a better programmer by teaching you the basic concepts underlying all computer systems. We want you to learn what really happens when your programs run, so that when things go wrong (as they always do) you will have the intellectual tools to solve the problem. In most of computer science, we're pushed to make abstractions and stay within their frameworks. But abstractions often ignore effects that can become critical. CSCI2271 introduce greater detail about system behavior and operation. This greater detail is needed for optimizing program performance, for working within the finite memory and word size constraints of computers, and for systems-level programming. Programming will be completed in the language C with comparisons to Java.

**Credits:** 3

CSCI227201
Computer Organization and Lab
Biswas, Anjum
Fall 2022
This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

Kim, Nam Wook
Fall 2022
Data can capture a snapshot of the world and allow us to understand ourselves and our communities better. With ever-increasing amounts of data, the ability to understand and communicate data is becoming essential for everyone. Visualization leverages our visual perception to provide a powerful yet accessible way to make sense of large and complex data. It has been widely adopted across disciplines, from science and engineering to business and journalism, to combat the overabundance of information in our society. In this course, students will learn to acquire foundational knowledge about how to design effective visualizations for analysis and presentation based on theories and principles from graphic design, perceptual psychology, and cognitive science. Students will also learn practical skills about how to rapidly explore and communicate data using Tableau and build interactive visualization products (e.g., articles, tools, and systems) using web-based frameworks including D3.js and Vega-Lite.

CSCI334301
Computer Vision
Wei, Donglai
Fall 2022
Computers are gaining abilities to "see" things just like our vision system. Face recognition has been embedded in almost all the digital cameras. Car detection and tracking have been used in self-driving vehicles. Modern search engines are not only able to find similar text patterns but also able to search for similar objects in huge image database. This course is to introduce principles and computational methods of obtaining information from images and videos. Topics include image processing, shape analysis, image matching, segmentation, 3D projective geometry, object tracking, human pose and action, image retrieval, and object recognition.

**Credits:** 3

**Room and Schedule:** 245 Beacon Street Room 125 TuTh 04:30PM-05:45PM

**Satisfies Core Requirement:** None

**Prerequisites:** CSCI1102 and MATH2210/ADMT2210 and MATH2202 or No image processing and Matlab experiences are required.

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Periodically in the Fall

**Student Level:** Undergraduate

---

CSCI334501

**Machine Learning**

Alvarez, Sergio

**Fall 2022**

This course provides an introduction to computational mechanisms that improve their performance based on experience. Machine learning can be used in engineered systems for a wide variety of tasks in personalized information filtering, health care, security, games, computer vision, and human-computer interaction, and can provide computational models of information processing in biological and other complex systems. Supervised and unsupervised learning will be discussed, including sample applications, as well as specific learning paradigms such as decision trees, instance-based learning, neural networks and deep learning, Bayesian approaches, meta-learning, and clustering. General concepts to be described include feature space representations, inductive bias, overfitting, and fundamental tradeoffs.

**Credits:** 3

**Room and Schedule:** 245 Beacon Street Room 102 TuTh 12:00 Noon-01:15PM

**Satisfies Core Requirement:** None

**Prerequisites:** CSCI2244 and CSCI1102 or Permission of Department
CSCI334901
Natural Language Processing
Prud'hommeaux, Emily T
Fall 2022
In this hands-on course, we study natural language processing (NLP), the subfield of artificial intelligence focused on analyzing, producing, and understanding human language. Using models and algorithms from formal language theory, statistics, and machine learning, we will explore methods for gaining insight into the structure and meaning of text. We will apply these methods to tasks such as information extraction, sentiment analysis, and machine translation. Students will work in teams to collect data and to implement their own NLP applications.

CSCI335901  
**Distributed Systems**  
Tseng, Lewis  
**Fall 2022**  
Students will learn the major paradigms of distributed computing including client-server and peer-to-peer models. Topics studied in these models include communication, synchronization, performance, fault-tolerance and security. Students will learn how to analyze the correctness of distributed protocols and will be required to build distributed applications.

**Credits:** 3  
**Room and Schedule:** 245 Beacon Street Room 229 MWF 10:00AM-10:50AM  
**Satisfies Core Requirement:** None

CSCI336301  
**Computer Networks**
Wiseman, Charles
Fall 2022
This course studies computer networks and the services built on top of them. Topics include packet-switch and multi-access networks, routing and flow control, congestion control and quality-of-service, resource sharing, Internet protocols (IP, TCP, BGP), the client-server model and RPC, elements of distributed systems (naming, security, caching, consistency) and the design of network services (peer-to-peer networks, file and web servers, content distribution networks). Coursework involves a significant amount of Java/C programming.

CSCI339101
Topics in Data Science: Computational Modeling of Contagion and Epidemics
Mohler, George
Fall 2022
A variety of phenomena exhibit contagion, from YouTube videos going viral to credit default in finance and the COVID-19 pandemic. In this course students will learn computational approaches to understanding, modeling, and quantifying uncertainty in contagion processes and epidemics. The course will provide an introduction to compartmental models, agent based simulation, branching processes, uncertainty quantification, and machine learning approaches. Applications covered in the course will span a variety of topics including forecasting infectious diseases, modeling viral processes on social networks, epidemic-type aftershock sequence models of earthquakes and near-repeat patterns in criminology.

Computer Science Courses: Spring 2023

CSCI110101
Computer Science I
Griffith, William
Spring 2023
Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

**Credits:** 3

**Room and Schedule:** 245 Beacon Street Room 102 MW 03:00PM-04:15PM

This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

**Computer Science II**  
**Levear, Duncan A**  
**Spring 2023**  
In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

CSCI224401
Randomness and Computation
Alvarez, Sergio
Spring 2023
This course presents the mathematical and computational tools needed to solve problems that involve randomness. For example, an understanding of random variables allows us to efficiently generate the enormous prime numbers needed for information security, and to quantify the expected performance of a machine learning algorithm beyond a small data sample. An understanding of covariance allows high quality compression of audio and video. Topics include combinatorics and counting, random experiments and probability, random variables and distributions, computational modeling of randomness, Bayes' rule, laws of large numbers, vectors and matrices, covariance and principal axes, and Markov chains.

Credits: 3
Room and Schedule: Fulton Hall 415 MWF 09:00AM-09:50AM
Satisfies Core Requirement: None
Prerequisites: CSCI2243 Logic and Computation or Math 2216 Intro to abstract Math.
CSCI224402
Randomness and Computation
Straubing, Howard

CSCI226101
Media Ethics in the Digital Age
Breen, Marcus J
Spring 2023
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. *** Students that have taken COMM2250 Mass Communication Ethics may not take this course***

This course gives students an understanding of the ethical dimensions of communication in an accelerating digital world. Drawing on philosophical principles that resonate with Jesuit values, students will learn to identify, evaluate, and where possible interpret moral conflicts in the media and communication environment, in the media industry, and between the industry and the public. Rather than look at ethical conflicts strictly from a Western lens, the course introduces the students to a variety of philosophical and cultural models. Using a case study approach, the course addresses various contemporary ethical concerns, such as social media and mental health, misinformation, hate speech, extremist content, documentaries, alternative business models for journalism, international and cross-cultural issues, commodity activism, guerilla marketing, entertainment, privacy, doxing, and copyright.

**Credits:** 3  
**Room and Schedule:** Stokes Hall 133S MW 04:30PM-05:45PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** None

This course explores the design and use of new technologies for learning and engages students in current debates around educational technologies, computational thinking, coding and robotics. Students will learn how to develop, implement, and evaluate technology-rich curriculum and will design their own computational meaningful projects. They will visit K-2 classrooms to implement technology-rich curricula, will learn how to use video to document their experiences and will become researchers to assess the thinking and learning fostered by the different tools.

**Credits:** 3  
**Room and Schedule:** Carney 306; W 10:00AM-12:20PM

CSCI226701  
**Technology and Culture**  
**Griffith, William**  
**Spring 2023**

This interdisciplinary course will first investigate the social, political, psychological, ethical, and spiritual aspects of the Western cultural development with a special emphasis on scientific and technological metaphors and narratives. We will then focus on the contemporary world, examining the impact of our various technological creations on cultural directions, democratic process, the world of work, quality of life, and especially on the emergent meanings for the terms "citizen" and "ethics" in contemporary society. Students will explore technologies in four broad and interrelated domains: (1) computer, media, communications, and information technologies, (2) biotechnology, (3) globalization, and (4) environmental issues.

**Credits:** 3  
**Room and Schedule:** Fulton Hall 245 M 04:30PM-06:50PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** None  
**Corequisites:** None  
**Cross-listed with:** ISYS2267,PHIL6670,SOCY6670
The goal of this course is to help you become a better programmer by teaching you the basic concepts underlying all computer systems. We want you to learn what really happens when your programs run, so that when things go wrong (as they always do) you will have the intellectual tools to solve the problem. In most of computer science, we're pushed to make abstractions and stay within their frameworks. But abstractions often ignore effects that can become critical. CSCI2271 introduce greater detail about system behavior and operation. This greater detail is needed for optimizing program performance, for working within the finite memory and word size constraints of computers, and for systems-level programming. Programming will be completed in the language C with comparisons to Java.

CSCI227201
Computer Organization and Lab
Biswa, Anjum
Spring 2023
This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

CSCI229101
An Introduction to Data Science
Mohler, George
Spring 2023
This course provides an introduction to concepts and techniques of computational data modeling and inference that can inform rational decision-making based on data. Topics include data preprocessing, exploratory data analysis and visualization, elements of probability and statistical inference, and predictive and descriptive modeling, with an introduction to machine learning concepts and approaches as time allows. Programming in Python will be required. Prospective students should also be comfortable with mathematical notation and reasoning at the college calculus level.

Credits: 3
Room and Schedule: 245 Beacon Street Room 229 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: CSCI1101 or equivalent introduction to CS with programming, and MATH1101 OR MATH1103
Corequisites: None
Cross-listed with: None
CSCI333301
Computer Graphics
Levear, Duncan A
Spring 2023
An introduction to the algorithms and techniques involved in representing, animating, and interacting with three-dimensional objects on a computer screen. The course will involve significant programming in Java and OpenGL.

Credits: 3
Room and Schedule: 245 Beacon Street Room 214 TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
Prerequisites: CSCI1102

CSCI334701
Robotics
Biswas, Anjum
Spring 2023
This course will introduce the basic principles of mobile robotics history, theory, hardware and control. Topics will include robot components, effectors and actuators, locomotion, sensors, feedback control, control architectures, representation, localization and navigation. This is a project-oriented course and the students will have hands-on experience with a real mobile robot. The students will be required to complete several individual programming assignments and a team design project.

Credits: 3
Room and Schedule: 245 Beacon Street Room 103 MWF 10:00AM-10:50AM
CSCI335301
Object-Oriented Design
Bolotin, Naomi
Spring 2023
Students will learn the ideas behind object-oriented languages and the corresponding programming techniques. Topics include design patterns, database access through Java, and server-side programming.

Credits: 3
Room and Schedule: 245 Beacon Street Room 205 TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
Prerequisites: CSCI2271 or Prerequisite: CSCI2271 Computer Systems
Corequisites: None
Cross-listed with: None
Frequency: Biannually in the Spring
Student Level: Undergraduate
Comments: None
Status: Offered
This course covers the basic life cycle of software development: requirements, design, implementation, testing, and production release. Students will learn the theory related to software engineering, but they will also learn hands-on how to create their own software. The main evaluation of the course is a team project that will simulate a small real project. The project will be done using the framework Django (Python), the CSS Framework Bootstrap, among other technologies. The project will be worth 50% of the grade, as well as 2 midterms, an exam, and a peer assessment (how your team members evaluate the work you did).

CSCI336101

**Human-Computer Interaction**

Kim, Nam Wook

**Spring 2023**

We are witnessing the exponential growth of computer technology that is revolutionizing the ways we access information and make decisions in our daily lives. Digital tools like word processors and spreadsheets improved how we write and crunch numbers. Communication software such as emails and video conferencing programs offer freedom to choose where we work. How can we design such user-driven systems addressing the unique needs of people? This course teaches students fundamental principles and methods to design, prototype, and evaluate useful and usable user interface systems. Topics on design knowledge include direct manipulation, visual information design, and human abilities. Design process methods include needfinding, rapid prototyping, heuristic evaluation, and usability testing. Students will carry out a semester-long team project to apply the knowledge and process, from formulating a design problem to developing and evaluating a digital prototype.

**Credits:** 3

CSCI336201
Operating Systems
Wiseman, Charles
Spring 2023
This course covers the fundamentals of operating systems (OS) design both from a theoretical and a practical perspective. The course is organized in two parts, each involving a separate course project. The first part deals with the system call interface between applications and the OS, the multi-process abstraction of a computing system, and task scheduling algorithms. The associated project involves the implementation of a custom Unix command-line interpreter (shell). The second part of the course covers memory management, multi-threading libraries, and file systems. A real implementation of these features is studied on a miniature, open-source operating system called xv6. The associated project involves an extension of xv6 to support custom features, such as new scheduling policies, kernel-level threads, or file system recovery.

CSCI336701
Compilers
Aviram, Amittai F
Spring 2023
Compilers are programs that implement high level programming languages by translating programs in such languages into machine code or some other easy to process representation. This course deals with the principles and techniques used in the design of compilers. Topics include parsing, static analysis, translation, memory management and code optimization. This course includes a significant programming project.

CSCI338101
Cryptography
Volkovich, Ilya
Spring 2023
Can Alice ensure that the message she sends to Bob can be read only by Bob, even if the message is intercepted by an eavesdropper? Can Bob ensure that the message he receives really came from Alice? How can a server verify a client's password without storing sensitive password information? This course studies the theoretical foundations of algorithms for private and public key cryptography, digital signatures, cryptographic hash-codes, and authentication schemes. We will also consider see a few world protocols and practices (e.g., SSL and public key certificates)

Credits: 3
Room and Schedule: 245 Beacon Street Room 214 TuTh 01:30PM-02:45PM
Satisfies Core Requirement: None
Prerequisites: CSCI1101 or Pre-Requisites:CSCI1101 or CSCI2243 and CSCI2244 or equivalent mathematics experience is required. The class requires mathematical maturity. CSCI3383 or similar experience is recommended.

CSCI338701
Topics in Computational Intelligence: Using Machine Learning Concepts
Bento Ayres Pereira, Jose
Spring 2023
In this project based class, we will introduce several machine learning concepts, and illustrate and practice their use. These topics will, tentatively, include: classification, data processing, dimensionality reduction, model evaluation and tuning, ensemble learning, regression, clustering, multi layer artificial neural networks and their use for classification, regression, generative adversarial networks, and reinforcement learning.

CSCI338901
Topics in Computer Systems: Blockchain and Consensus Systems
Tseng, Lewis
Spring 2023
We focus on the concept and the fundamentals of distributed systems. We will cover important techniques and theoretical foundations (e.g., various impossibility results and fundamental limitations in distributed systems). Course topics include cloud computing, peer-to-peer systems, distributed storage, fault-tolerant consensus, etc. We will first learn the techniques in their original contexts and further investigate how various techniques are adapted and evolved for blockchain and consensus systems. The instructor hopes that students will be able to explain fundamental concepts and challenges in distributed systems, and understand how various consensus systems circumvent these challenges. Students are expected to take a deep dive into various real-world systems and identify flaws and limitations in their design. Students should be able to take informed sides in all the major technological debates within the domain of consensus systems. For students who have taken ECON 3382, they will continue working on the same or pivoted project (that is along the same direction). For other students, they will work on projects on a smaller scale.

CSCI339001
Topics in Computer Science: Unlocking the Language Code: Computer Parsing and Acquisition of Grammar
Yun, Mira
Spring 2023
An unsolved mystery is how children are able to acquire the grammar of their language from exposure to just a small subset of sentences. This course focuses on computer parsing of language, as well as programs that can learn grammar rules. Different types of morphological and syntactic parsers will be covered, with reference to both English and other languages. Students will implement a variety of language tools and a final project of their choosing in Java.

Topics in Computational Intelligence: Biomedical Image Analysis
Wei, Donglai
Spring 2023
This course presents both the traditional and the cutting-edge deep-learning-based image processing algorithms with particular emphasis on problems in biomedical research. It covers image acquisition, visualization, filtering, enhancement, registration, classification, segmentation and detection. The course goal is to provide hands-on coding experience for motivated undergraduates and first year PSYC/BIO graduate students in a wide range of image modalities with various popular computational tools. Besides lectures, it has weekly labs in python using Colab and one final project. Topics in Comp Intell: Biomedical Image Analysis

CSCI556401
Computational Models of Cognition
Hartshorne, Joshua K
Spring 2023
Introduction to computational theories of human cognition. Focus on principles of inductive learning and inference, and the representation of knowledge. Computational frameworks covered include Bayesian and hierarchical Bayesian models; probabilistic graphical models; nonparametric statistical models and the Bayesian Occam's razor; sampling algorithms for approximate learning and inference; and probabilistic models defined over structured representations such as first-order logic, grammars, or relational schemas. Applications to understanding core aspects of cognition, such as concept learning and categorization, causal reasoning, theory formation, language acquisition, and social inference.

Room and Schedule: 245 Beacon Street Room 102 M 12:00 Noon-12:50PM; Advising Section
Satisfies Core Requirement: None
Prerequisites: Permission of Department
The Freshman Topic Seminars give freshmen an opportunity to meet with their faculty advisor once a week to enjoy small group discussions on a topic of research and intellectual interest to the instructor. The Freshman Topic Seminars are limited to 14 students per section, meet once a week for 75 minutes, end before the Thanksgiving break, earn one credit, and are graded pass/fail. The short readings in the Topic Seminars focus on specific topics unique to each section and are designed to allow students to explore new academic areas. A list of current topics can be found at http://www.bc.edu/offices/fye/cornerstone/freshman/

This will be an interactive three-credit seminar of fifteen students, serving as one of students' university electives and one of the five courses in the first semester. Your instructor will serve as your academic advisor during the first year. This course offers an introduction to college life. The readings and discussions will investigate personal and social development in the college years. Topics will include the nature of learning, diversity, social justice, human sexuality, intimacy, addiction, and other topics. The class materials and strategies are designed to be provocative and practical as well as intellectually stimulating.

**Credits:** 3

**Room and Schedule:** O'Neill Library 246 MW 02:00PM-03:15PM

Earth and Environmental Sciences Courses: Summer 2022

EESC114001
Our Mobile Earth
O'Brien, Suzanne R
Summer 2022
This course will provide you with an introduction to the structure of Earth and the dynamic processes that continuously shape and remodel its surface. During class, we will discuss the formation and evolution of the oceans and continents within the framework of the modern theory of plate tectonics. The locations, causes and effects of earthquakes and volcanoes are presented. The dynamics within Earth which drive the tectonic plates are outlined.

Credits: 3
Room and Schedule: On-line Asynchronous
Satisfies Core Requirement: Natural Science
Prerequisites: None
Corequisites: None

Environmental Issues and Resources
Becker, Richard
Summer 2022
Hybrid Core Course includes three themes: (1) Intro to Environmental Geology, (2) How to write well and how to write field trip reports, (3) How to use Google Earth to understand Earth Materials and Processes. Learn about the major processes at work inside and on the surface of the earth. Learn to be a careful observer and to write succinct field trip reports, through two field trips and the writing of a field trip report. Each class is designed to examine the facts, historical background, and through in-class exercises, homework and field trips, provide experience in analyzing and solving real world problems associated with environmental issues, resources and sustainability. Demonstrations, videos, readings and several field trips underscore important concepts and applications and the importance of careful observation. Online Google Earth exercises, done remotely, will introduce the power of this geographic application to understand geology.

Earth and Environmental Sciences Courses: Fall 2022

EESC113201
Exploring the Earth
Chua, Emily
Fall 2022
The Earth is a dynamic planet that our species is clearly changing. A great challenge of the twenty-first century is to maintain the Earth's ability to support its growing human population. This course discusses the origin and materials of the Earth and the processes by which it has evolved. It is a first course for Geological Sciences majors and also provides a background for departmental majors and minors. EESC1132 is appropriate as a natural science core course for students interested in the Earth Sciences. The laboratory consists of in-class exercises, analysis of rocks, and a weekend field trip.

Credits: 4
Room and Schedule: Devlin Hall 10 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: Natural Science
Prerequisites: None

EESC115001
Astronomy
Kuchar, Thomas A
Fall 2022
Astronomical observations and theories date back to the beginning of recorded history. The development of astronomy is closely tied to the growth of physics, mathematics, philosophy, and theology. Emphasis is on large-scale concepts and on how we know what we know about the stars, our galaxy, and the universe. The course covers these discoveries and ideas from the earliest days of astronomy to many of the recent, exciting advances.

EESC116801
Environmental Geosciences: Earth Processes and Risks
Chua, Emily
Fall 2022
This course may be taken independently of EESC1167. This course will explore the dynamic processes operating on and within the earth and how those processes can impact humans. We will explore the nature of natural disasters, including river and coastal flooding, volcanic eruptions, earthquakes, landslides, severe storms, climate changes, and bombardment by rare extraterrestrial objects. Emphasis will be placed on understanding the current science used to predict the occurrences of these disasters, how accurate those predictions are, and the associated mitigation practices.

**EESC117001**  
**Rivers and the Environment**  
**Snyder, Noah P, PHD**  
**Fall 2022**  

Scientific understanding of rivers is vital to address many of today's environmental challenges. Rivers transport and distribute water, sediment, nutrients, and contaminants throughout the landscape. They provide habitat and migration pathways for countless aquatic species. Rivers supply fresh water, power generation, and recreational opportunities to much of the world's human populations. We will learn about the geological, hydrological, and biological processes that are important to rivers and watersheds, and how knowledge of these processes aids our ability to manage, protect, and restore these systems.

**Credits:** 3

EESC118001
The Living Earth I
Kruckenberg, Seth C
Fall 2022
This core course provides a broad and modern presentation of the major topics and principles of Earth Science. The lectures will cover all the fundamental subjects of geology, with emphasis on earth materials such as minerals, rocks and internal and external Earth processes, with a brief overview of important aspects of Earth history. The labs will involve hands-on work studying minerals, igneous rocks, sedimentary rocks, metamorphic rocks, viscosity, weathering and running water, formation of ripples and sand dunes, plate tectonics, fossils, and earthquakes, in addition to a local field geology trip during lab time. Additional topics may be covered if time allows.

**Global Implications of Climate Change**

**Pisani Gareau, Tara**

**Fall 2022**

Climate change is one of the defining issues of our time. Decisive and swift action to mitigate carbon emissions is needed in order to prevent catastrophic events and unhealthy environments for future generations. Societies worldwide will need to adapt to a new environmental reality. However, the causes, effects, and costs of climate change are not equally distributed, which raises ethical questions about responsibility and justice. This course will encourage critical engagement with and personal reflection on these important issues, covering the science behind climate change, the roles that social, political, and economic conditions play in understanding and internalizing climate change, and the different roles of governments, businesses, religious communities, and individuals for enacting (or preventing!) ambitious solutions to climate change.

EESC150701
Ebel, John E
Fall 2022
This course explores U.S. energy. From the perspectives of history, culture, technology, engineering, and foreign policy, we ask how we have created and distributed energy in the past, how energy systems function in the present, and how they may evolve. We investigate energy production, distribution, and use--coal, oil, nuclear power, hydropower, wind, and solar power--along with cables, pipelines, and transmission systems. Through hands-on exercises and field trips, students learn how past technological and economic choices shaped current U.S. energy systems, how energy systems affect the environment, and how sustainable energy systems will be in the future.

Credits: 3
Room and Schedule: 245 Beacon Street Room 107 TuTh 03:00PM-04:15PM

EESC150705
Offen, Vena
Fall 2022
This course explores U.S. energy. From the perspectives of history, culture, technology, engineering, and foreign policy, we ask how we have created and distributed energy in the past, how energy systems function in the present, and how they may evolve. We investigate energy production, distribution, and use--coal, oil, nuclear power, hydropower, wind, and solar power--along with cables, pipelines, and transmission systems. Through hands-on exercises and field trips, students learn how past technological and economic choices shaped current U.S. energy systems, how energy systems affect the environment, and how sustainable energy systems will be in the future.

**EESC220101**  
**Environmental Systems: The Human Footprint**  
**Gross-Camp, Nicole D**  
**Fall 2022**

Humans have become an increasingly significant force on Earth system, including the atmosphere, biosphere, and hydrosphere. This course explores the influence of humans on natural systems and how environmental solutions and consequences link to social, political, economic, health, and justice issues. Specifically, we will discuss topics related to population growth, energy, agriculture, urbanization, and environmental justice. This course is part of the Environmental Systems introductory sequence (EESC2201-EESC2208) for Environmental Geoscience majors.

**Credits:** 2

**Room and Schedule:** 10/21-12/9; Devlin Hall 201 TuTh 10:30AM-11:45AM

**Satisfies Core Requirement:** None

**Prerequisites:** None

EESC220601

Environmental Systems: Oceans
Palevsky, Hilary I
Fall 2022

The oceans cover 70% of the earth's surface and are home to much of its life. The oceans are critical to the earth's biogeochemical cycling of energy and mass. Ocean currents play a key role in climate through redistribution and exchange of heat with the atmosphere and storage of CO2. Coastal areas, the narrow interface between land and ocean, represent some of the most productive, populated, and vulnerable regions on earth. The course provides an introduction to the ocean's role in earth processes and explores topics and challenges facing a changing planet through case studies and critical and analytical thinking.

Structural Geology
Kruckenberg, Seth C
Fall 2022
The goal of this course is the development of skills in the structural analysis of rock bodies as seen in outcrops, or small areas, to gain an understanding of the geometries, sequencing, and kinematics of deformational features. Structures such as folds, faults, foliations, lineations, and shear zones will be considered at various scales, as visible in the field, or in thin section. We will also discuss some inter- and intra- granular deformation mechanisms. The 3-hour laboratory consists of in-class problems and some field-based problems.

**EESC339601**
**The IPCC Scientific Assessment**
**Shakun, Jeremy D**
**Fall 2022**
This seminar will focus on the IPCC AR6 (2021) Working Group I report (Physical Science Basis). The IPCC stands for Intergovernmental Panel on Climate Change and is the main international organization for assessing the current state of scientific knowledge about global climate change. The IPCC reports are a result of contributions from thousands of scientists from all over the world, and are a comprehensive summary of the current state of climate change research. This course is intended for students with an introductory background in climate change science who want to gain a deeper understanding of it, particularly those aspects of greatest relevance to society. We will follow a reading-and-discussion format. Students will be expected to carefully read the assigned parts of the report, lead some of the discussions, and actively participate in all of the discussions.

**Credits:** 3
**Room and Schedule:** Devlin Hall 307 TuTh 10:30AM-11:45AM
**Satisfies Core Requirement:** None
**Prerequisites:** At least one of EESC 1174, 1501, 2205, or instructor permission

EESC554001  
**Marine Biogeochemistry**  
Palevsky, Hilary I  
**Fall 2022**  
In this course, we will use marine biogeochemical tracers as a tool to understand the ocean as a system and to investigate the physical, chemical, biological, and geological processes that control the sources, distributions, and transformations of these tracers. We will describe the flow of essential elements (especially carbon, nitrogen, oxygen, and iron) through the open ocean, following their path from the air-sea interface to primary production in the surface ocean to organic matter export and remineralization in the water column and seafloor sediments. Students will develop skills in quantitative analysis of biogeochemical data through problem solving exercises and will apply concepts covered in class to interpretation of primary literature.

**Credits:** 3

EESC554301
Tectonics
Kruckenberg, Seth C
Fall 2022

Plate Tectonics, the idea that the surface of the Earth moves and reshapes itself through time, has revolutionized geology. While a great deal has been learned about the movements and evolution of the Earth's lithospheric plates through time, the full implications of this theory remain an area of active research and debate. Modern studies increasingly document important feedbacks between patterns of climate, deposition, metamorphism, magmatism, seismicity and deformation that can be understood in the context of the past and present motions of the Earth's plates. This course will focus on understanding the linkages between these dynamic processes through time.

EESC558201
Senior Environmental Geoscience Research Seminar I
Snyder, Noah P, PHD
Fall 2022
In this two-semester course sequence, students will be introduced to the process of conducting original scientific research. This includes exploring fundamentals of a natural system from reading the scientific literature, defining a problem, designing and executing an experiment, analysis, data interpretation, and presentation of results in written and oral formats. Students will work individually or in groups within a broader research project. Topics and field areas will vary from year to year depending on existing projects and expertise of the instructor. The EESC5582-5583 sequence fulfills the senior research experience requirement for Environmental Geoscience majors.

**Credits:** 2  
**Room and Schedule:** Devlin Hall 307 M 02:00PM-03:50PM

Earth and Environmental Sciences Courses: Spring 2023

EESC114601
Origin and Evolution of Life on Earth
Strother, Paul K
Spring 2023
This course explores current theories about the origins of life, beginning with the original hypothesis of the Russian biochemist A.I. Oparin. Darwin's theory of evolution is emphasized, but many different components of the natural sciences touch upon this topic. The course lectures include the study of the oldest fossils, life in extreme habitats, cellular biology, prebiotic molecules, and the search for life on other planets.

Credits: 4
Room and Schedule: Devlin Hall 26 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: Natural Science
Prerequisites: None
Corequisites: None
Cross-listed with: None
Frequency: Every Spring
Student Level: Undergraduate

EESC117401
Climate Change and Society
Ming, Yi
Spring 2023
Global climate change may be one of the biggest issues facing humanity in the twenty-first century. We investigate the scientific basis for global warming forecasts from what is well known to what is deeply uncertain based on theory, models, and the geologic record of earth's climate history. We discuss the political, economic, and social dimensions surrounding the global warming debate, and explore the current and potential impacts of climate change on developed and developing societies. Connections to recent media will be emphasized to give students an up-to-date view on the state of our national conversation on climate change.

Credits: 3
Room and Schedule: 245 Beacon Street Room 107 MWF 11:00AM-11:50AM
Satisfies Core Requirement: Natural Science
Prerequisites: None
EESC117701
Cosmos
Kuchar, Thomas A
Spring 2023
Open to all students. There are more than a dozen interplanetary probes from numerous countries that are currently collecting data from several planetary bodies in the Solar System. These exploration missions are expanding knowledge of our Solar System, which is mostly built on only about half a century of space exploration. We will discuss these space missions and their scientific goals and results, which are increasingly oriented to answer questions on planetary evolution and the possibility of extraterrestrial biospheres. Throughout this course, the fundamentals of how science works will be emphasized. If weather permits, there might also be outdoor lectures for star-gazing opportunities.

Geoscience and Public Policy
Kafka, Alan L
Spring 2023
In this course, we will explore case studies that demonstrate the role of the earth sciences in addressing problems of public policy. For each case study, students will be introduced to the underlying scientific concepts relevant to the problem being addressed. After this scientific foundation is developed, we will discuss how it needs to be considered as part of the process of making policy decisions. The course will also introduce students to how scientists and public policy makers apply the concepts of probability and statistics in the decision making process.

Environmental Systems: The Human Footprint
Behn, Mark D
Spring 2023
Humans have become an increasingly significant force on Earth system, including the atmosphere, biosphere, and hydrosphere. This course explores the influence of humans on natural systems and how environmental solutions and consequences link to social, political, economic, health, and justice issues. Specifically, we will discuss topics related to population growth, energy, agriculture, urbanization, and environmental justice. This course is part of the Environmental Systems introductory sequence (EESC2201-EESC2208) for Environmental Geoscience majors.

EESC220501
Environmental Systems: Climate Change
Chua, Emily
Spring 2023
The climate system is a complex machine for moving energy around the planet that depends on myriad interactions between air, water, ice, rocks, and life on various time and space scales—and it affects nearly every aspect of the environment we live in. Throughout Earth's 4.5 billion year history, climate has experienced periods both warmer and colder than today, as evidenced by records of environmental change preserved in natural archives. Today, human activity is the largest driver of change in the global climate system. This course provides an introduction to how Earth's climate works, the history of past climate changes, current trends and projected future conditions—all focused on parsing out what is well known to what is deeply uncertain. We will close with a brief survey of the political, economic, and sociological dimensions of climate change to understand how the science fits into a larger framework.

EESC220801
Environmental Systems: Quantitative Methods
Behn, Mark D
Spring 2023
This course focuses on some mathematical topics that are commonly used in analyses of environmental systems. The primary emphasis in the course will be on statistical methods, especially understanding statistical sampling and the determination of the mean, standard deviation, and confidence intervals of a population. Some commonly used probability distributions including the normal and Poisson distributions will be discussed. Other topics such as line fitting, non-linear models, and feedback systems will be introduced. The course is part of the Environmental Systems introductory sequence (EESC2201-EESC2208) for Environmental Geoscience majors.

EESC226401
Stratigraphy and Sedimentation
Wilson, Kathleen
Spring 2023
Sedimentary rocks cover most of the surface of the earth and are valuable repositories for energy and information about the history of the earth. The goal of this course is to teach students how to "read" the history recorded in these rocks. This course will cover the basics of sedimentary rock description recognition and correlation over long distances in the field. We will also learn about the processes that produce sediment; transportation of sediment in streams, rivers, and bodies of standing water; and the formation of carbonate limestones. A 3-hour lab is required.

EESC331101
Earth System Science and Global Sustainability
Tian, Hanqin
Spring 2023
The humanity’s grand challenges in climate change, energy, food, health and water provision involve complex geological, physical, biological and societal interactions within the Earth system. Solutions to the grand challenges demand the attainment of a new multidisciplinary paradigm for research and education. This course explores the Earth system as a whole, with an emphasis on the interrelationships between geological, biological, climatological, and human systems on regional and global scales. More broadly, this course seeks to dismantle the barriers between disciplines (geology, geography, biology, humanities, sociology, etc.) which study Earth system components by promoting multi- and inter-disciplinary perspectives. Additionally, we will explore the causes and impacts of global change through the lens of Earth system science. This knowledge becomes a firm foundation to formulate creative solutions to climate change and sustainability challenges we face today.

**EESC333501**

**Topics in Geobiology**

**Strother, Paul K**

**Spring 2023**

Geobiology broadly concerns the dynamic interface between biology and geology at the systems level. This year, topics will focus on Paleobotany and Palynology as we explore the evolution of photosynthesis and its historical importance to our planetary ecosystem through the study of fossil plants. Starting with the beginnings of photosynthesis and the origin of land plants, Paleobotany covers the evolutionary history of plants on earth, including the origins of forests, coal, the rise of the flowering plants, and the use of fossil plants as indicators of past climate. Palynology, the study of spores and pollen, is used to document past vegetation and climate change at a wide range of timescales.

EESC338001
Environmental Oceanography
Chua, Emily
Spring 2023
In this course, fundamental physical, chemical, geological, and biological processes occurring in ocean environments are examined in the context of how they impact humans and how humans have impacted the ocean. Emphasis is placed on understanding the challenges involved with the development of environments and resources through actual case studies and problem solving. Topics include coastal oceanography and shore processes, water chemistry, biogeochemical cycles and circulation, and air/sea interactions as related to pollution and climate change.

EESC440001
Geomorphology
Sheehan, Christopher
Spring 2023
Geomorphology is the study of landforms, landscapes, and the processes that have shaped them. It is the science of scenery. Not why some landscapes, such as the Grand Canyon or Glacier National Park are deemed "stunning," but rather how landscapes like these formed. It is both a basic science, driven by curiosity about how the landscapes in which we live and play came to be, and an applied science, with implications for mitigating natural hazards and adverse environmental change. The course will feature a field trip to local destinations.

Advanced Earth System Science and Global Sustainability
Tian, Hanqin
Spring 2023
The humanity's grand challenges in climate change, energy, food, health and water provision involve complex geological, physical, biological and societal interactions within the Earth system. Solutions to the grand challenges demand the attainment of a new multidisciplinary paradigm for research and education. This course explores the Earth system as a whole, with an emphasis on the interrelationships between geological, biological, climatological, and human systems on regional and global scales. More broadly, this course seeks to dismantle the barriers between disciplines (geology, geography, biology, humanities, sociology, etc.) which study Earth system components by promoting multi- and inter-disciplinary perspectives. Additionally, we will explore the causes and impacts of global change through the lens of Earth system science. This knowledge becomes a firm foundation to formulate creative solutions to climate change and sustainability challenges we face today.

Topics in Geobiology
Strother, Paul K
Spring 2023
Geobiology broadly concerns the dynamic interface between biology and geology at the systems level. This year, topics will focus on Paleobotany and Palynology as we explore the evolution of photosynthesis and its historical importance to our planetary ecosystem through the study of fossil plants. Starting with the beginnings of photosynthesis and the origin of land plants, Paleobotany covers the evolutionary history of plants on earth, including the origins of forests, coal, the rise of the flowering plants, and the use of fossil plants as indicators of past climate. Palynology, the study of spores and pollen, is used to document past vegetation and climate change at a wide range of timescales.

**EESC557301**  
**Geophysical Modeling**  
**Behn, Mark D**  
**Spring 2023**  
This course will teach the fundamental concepts of mathematical geophysical modeling. Specifically, we will discuss forward, physics-based models that describe the temporal and spatial evolution of geologic systems (e.g., heat transport, chemical advection/diffusion, sediment transport, fluid flow, precipitation/dissolution). Students will learn how to formulate mathematical descriptions of geologic variables and then solve these equations numerically. The class will focus on numerical solutions to box models and 1-D & 2-D problems utilizing finite-difference methods. However, students will also be exposed to other numerical approaches (e.g., finite-element and finite-volume), as well as how models can be extended to higher dimensions. An emphasis will be placed on practical problem-solving skills required for research in the earth and environmental sciences.

**Credits:** 3  
**Room and Schedule:** Devlin Hall 324 MW 01:00PM-02:15PM

EESC558601
Advanced Environmental Oceanography
Chua, Emily
Spring 2023
In this course, fundamental physical, chemical, geological, and biological processes occurring in ocean environments are examined in the context of how they impact humans and how humans have impacted the ocean. Emphasis is placed on understanding the challenges involved with the development of environments and resources through actual case studies and problem solving. Topics include coastal oceanography and shore processes, water chemistry, biogeochemical cycles and circulation, and air/sea interactions as related to pollution and climate change.

EALC415101
Readings in Chinese Literature and Philosophy
Chiang, Sing-chen L
Fall 2022
Classes conducted in both modern Mandarin and English. Satisfies Foreign Language Proficiency core requirement. By way of readings in Chinese literary and philosophical canons, this course introduces students to the basic diction and grammar of classical Chinese. Classical Chinese is the Latin of East Asian written traditions, the gateway to the cultural and historical legacy of East Asia, and the foundation of modern literary Chinese. We will read and translate selected passages from Chinese classics, including the Analects of Confucius, Mencius, the Daodejing, and Zhuangzi. Class discussion will center on major philosophical concepts and their historical contexts.

EALC216101  
**Ghosts and Strange Happenings in Chinese Literature**  
Chiang, Sing-chen L  
**Spring 2023**  
Introduction to the East Asian classic Extensive Records for the Era of Great Peace, an encyclopedic collection of classical Chinese "records of anomalies" (zhiguai) about ghosts, immortals, monsters, fantastic lands, and other such "strange-but-true" happenings. Compiled by the court in the tenth century, the collection soon became an influential source of creative inspiration for East Asian writers. Students will learn about the diverse literary, philosophical, and religious traditions that helped shape these fascinating narratives. Special attention will be paid to the historical conditions that the stories reflect, including moral values, gender roles, and sociopolitical issues. No prerequisite. Taught in English.  

**Credits:** 3  
**Room and Schedule:** Fulton Hall 423 TuTh 12:00 Noon-01:15PM  
**Satisfies Core Requirement:** Cultural Diversity  
**Prerequisites:** None

Accelerated Intermediate Korean
Rhee, Kyung-jin
Spring 2023
Conducted mostly in Korean. Satisfies Foreign Language Proficiency core requirement. This course is a continuation of Accelerated Elementary Korean and is for those who have received significant exposure to Korean language and culture and thus have a good command of listening and speaking skills. It is an accelerated course covering important grammatical structures and materials from Intermediate Korean I & II for the purpose of providing tools to build upon the foundation of students' Korean language ability. Hence, this class is designed to meet the linguistic needs that are unique to heritage language students to (i) increase accuracy in grammar, (ii) develop basic reading writing skills, and (iii) expand vocabulary through introduction of Chinese characters. Upon completion of this course, students will fulfill Korean language requirement.

ECON211001
The European Union and Lisbon as an Economic, Political & Cultural Gateway
Albuquerque, Rui
Summer 2022
This course offers an introduction to the European Union. We revisit the origins of the EU after World War II and the various stages of growth with countries joining the EU at different points in time. The course discusses the expansion of integration that has taken place in Europe, from the coordination of trade policies, to coordination of economic policies, including monetary policies and integration of local banking sectors, and free movement of capital and labor. The course combines classroom presentations and invited speakers with site visits.

ECON228901

**Which is Better? An Economic Comparison of Health Care in France, the U.K., and the U.S.**

Regan, Tracy L

Summer 2022
This course is designed as an introduction to the health care systems of the U.S., the U.K., and France. In 2010, the WHO carried out the first ever analysis of the world's health systems and found that France provided the best overall health care. The U.K. was ranked #18 and the U.S. at #37. This couples with the U.S. spending 17.2% of its GDP in 2016 on health expenditures despite not having particularly good health outcomes (e.g., 38.2% obesity rate, 2015). By comparison, France only spends 11% of its GDP on health expenditures and has an obesity rate of 19.5%. The New York Times recently published a series of articles attempting to understand why the U.S. spends so much more than other (developed) countries and did not note and differences in utilization rates, for example, and instead explained the phenomena by referencing Uwe Reinhardt's famous 2003 paper entitled, "It's the Prices Stupid." In 2011, the BBC was happy to report the better health the English enjoyed relative to the Americans despite similar demographics (and worse weather and food!). This course will introduce students to these three representative health care systems and will seek to understand the disconnect between health care outcomes and spending. The 2010 Affordable Care Act essentially preserved the privatized nature of health care in the U.S. despite nearly every other (developed) country in the world having universal coverage.

ECON330801
Game Theory in Economics
Sharunova, Vera
Summer 2022
This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

Law and Economics
Copland, Andrew G
Summer 2022

In this course, we utilize microeconomic analysis to evaluate the performance of legal institutions with particular attention to the issue of economic efficiency. We will focus on questions in the common law fields of property, torts, and contracts (and in the theory and practice of criminal law if time permits).

ECON336101
Monetary Theory and Policy
Kazemi, Hossein S
Summer 2022
This course is an analysis of how the operation and behavior of financial markets are influenced by monetary policy, the actions taken by the Federal Reserve to promote full employment, price stability, and moderate long-term interest rates. Emphasis is placed on studying the interaction between financial intermediaries (e.g., commercial banks, investment banks, mutual funds, hedge funds, etc.) and a nation's central bank. Students are introduced to the modern theories of the demand for and supply of money, as well as their implications for economic activity, the cost of living, employment, and the conduct of monetary policy. Particular emphasis is given to recent Fed policy, including Quantitative Easing and Quantitative Tightening and the impact of these policies on asset prices and long-term interest rates. Furthermore, through an extensive use of Bloomberg in this class students learn how to analyze the impact of these and other Fed policies on the U.S. economy and financial markets to provide a window into how modern practitioners in the discipline follow and respond to changes in U.S. monetary policy. Prerequisites: macro theory and econometrics.

ECON338901
Machine Learning for Economics
Arlashin, Anatoly S
Summer 2022
One of the defining features of the world around us today is the ever-increasing amount of data that describe our daily lives. This "big data" phenomenon, as it became known, has led to developing of new methods, called "machine learning," that allow high-dimensional statistical analysis in ways that were either impossible or infeasible for classical statistical methods, such as regression analysis. The goal of this course is to provide students with an introduction to machine learning in a framework way that makes it applicable to causal economic analysis. While we will cover the necessary theoretical foundations, the emphasis will be placed on application and learning how and when to use these new methods, and what are their pros and cons compared to classical methods of statistical analysis.

**International Monetary Economics**  
**Magnani, Marco**  
**Summer 2022**

The course presents a basic economic analysis of open economy macroeconomics, with a focus on the theory of optimum currency area. These notions are then used to provide a historical and critical analysis of the construction and evolution of the European Monetary Union (EMU) after World War II. In this context, the effects on the Eurozone of the subprime crisis and of the crisis of sovereign debt are examined in depth.

ECON110124
Principles of Economics
Cristoforoni, Enrico
Fall 2022
This course is an analysis of prices, output, and income distribution through the interaction of households and business firms in a modern Western economy. It also includes an analysis of national income and employment, economic fluctuations, monetary and fiscal policy, inflation, growth, and international aspects of macroeconomic policy. The appropriate role of government intervention is examined, and basic analytical tools are applied to current economic problems. Open to freshmen, sophomores, and juniors. Course is open to seniors by department permission.

ECON150101
Beyond Price: Markets, Cultures, Values
Erbil, Can
Fall 2022
Core Renewal course: Complex Problems. This course is about wealth and values—the condition of our knowing the price of everything and the value of nothing. Given the glamour and power surrounding money and the super-rich, we examine issues concerning the economy, values, and the dominance of the market over our environment and personal lives. We look at markets, incentives, ecology and ethics through a combination of literature and economics. We also take up specific case studies that will enable us to better understand the relation between business decisions or market interests and their impact on the ordinary lives of working men, women, and children.

**ECON170201**  
**Life, Liberty & Heath: The Economics, Policy and Law of Healthcare**  
**Regan, Tracy L**  
**Fall 2022**  
Recently, health has become a central focus of political infighting, public discord, and personal worry. Health care and health insurance now dominate everything from think tanks to Jimmy Kimmel Live! Meanwhile, concussions go up, NFL ratings go down, drug prices soar, and opioid abuse damages individuals, families, and the health care system, and the economy. Such complex issues are best understood through interdisciplinary study. These paired classes will introduce basic principles of economics, law, and public policy through the lens of contemporary problems involving enduring questions of government authority and individual autonomy, morality, and ethics, social justice, and human rights.

ECON170401
Real Estate and Urban Action: Transforming Communities and Increasing Access to Opportunity
Sanzenbacher, Geoffrey T
Fall 2022
The course explores concepts of social economic and racial inequality with a focus on the interaction between housing, labor markets, and the ultimate accumulation of wealth. Housing will be examined through a study of the history of affordable housing, an exploration of the transformation of Columbia Point Public Housing Development to Harbor Point, and an applied simulation. Labor markets will be explored at the theoretical level (e.g., labor supply/demand, human capital, discrimination), before diving into data and literature on how changes over the last 40 years have expanded inequality. The course will conclude with how the lack of both affordable housing and quality labor market opportunities can interact to restrict intergenerational wealth accumulation and opportunity. The course will challenge students to explore and test solutions for transforming distressed communities into safe, desirable neighborhoods that produce better outcomes for all residents through field projects, simulations, and a practical final project.

Fall 2022
The course explores concepts of social economic and racial inequality with a focus on the interaction between housing, labor markets, and the ultimate accumulation of wealth. Housing will be examined through a study of the history of affordable housing, an exploration of the transformation of Columbia Point Public Housing Development to Harbor Point, and an applied simulation. Labor markets will be explored at the theoretical level (e.g., labor supply/demand, human capital, discrimination), before diving into data and literature on how changes over the last 40 years have expanded inequality. The course will conclude with how the lack of both affordable housing and quality labor market opportunities can interact to restrict intergenerational wealth accumulation and opportunity. The course will challenge students to explore and test solutions for transforming distressed communities into safe, desirable neighborhoods that produce better outcomes for all residents through field projects, simulations, and a practical final project.

**The State of Affordable Housing in the States**

Van Meter, Robert H

Fall 2022
Course offered for Sophomores only. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

Geographic Information Systems for Planning and Decision-Making
Cohen, Will W
Fall 2022
Large quantities of information are available to describe our social and physical environment with high detail, but making sense of this data requires specialized skill sets. Geographic Information Systems (GIS) is a general approach to analysis and is a powerful set of tools for understanding complex problems or for making a compelling argument about issues grounded in the physical or social environment. It is widely used in the public and private sectors. This course will introduce students to the use of GIS and representation as a means of looking at and representing spatial data. Students will learn how to perform the three broad steps of spatial analysis: 1) collecting and organizing data, 2) analyzing this data for appropriate patterns, and 3) using software to represent data on maps to support decision making. STEM-designated.

Financial Forecasting
Mc Gowan, Richard, SJ
Fall 2022
The theory and practice of applied time series analysis will be explored. First the different
segments (trend, seasonality, cyclical, and irregular) of a time series will be analyzed by
examining the Autocorrelation functions (ACF) and Partial Autocorrelation functions (PACF). The
specifics model to model the various types of time series include linear regression, panel
regression, seasonal decomposition, exponential smoothing, ARIMA modeling as well as
combining models. This course is offered as an online hybrid course. In addition to the online
lectures presented on the Canvas LMS, there are three required on-campus class meetings on
Saturday mornings. Please see the course syllabus for additional details.

Public Policy in an Aging Society
Rutledge, Matthew S
Fall 2022
We live in a rapidly aging nation. In two decades, the age distribution of the U.S. will look like
that of Florida today. We will analyze the underlying demographic trends, the economic status of
the aged, the fiscal challenge of an aging society, public policies (especially social insurance)
designed to assist older Americans, the impact of public policy on individual behavior, and
proposals for reform.

Impact of News on Financial Markets
Kazemi, Hossein S
Fall 2022
The impact of news on financial markets is examined in this course. More specifically, this course studies how Central Banks and Financial Markets react to economic and financial news. Using tools of economics and finance, the impact of macroeconomic data releases, business and financial news, as well as domestic and global political news on the financial markets will be measured and evaluated in this course. It further examines how the markets, including bonds, equities, commodities and foreign exchange markets, react to the news.

Environmental Economics and Policy
Sweeney, Richard L
Fall 2022
This course provides an introduction to the economics of environmental policy. We begin by examining market failures from externalities and public goods. We then discuss public policy options to correct these failures, and develop tools to assess the costs and benefits of each approach. With this framework in place, the remainder of the course is spent evaluating past efforts to conserve land and improve air and water quality, before concluding with an extensive discussion about global climate change policy.

ECON330801
Game Theory in Economics
Sharunova, Vera
Fall 2022
This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

In some economic situations, agents do not have all the information they need to make a decision, hence they need to decide under uncertainty. Furthermore, some agents may have better information than others. These information asymmetries have important effects in economic environments and institutions. Some examples are hiring and employment, business contracts, insurance, property rights, entrepreneurship. This course aims to cover a series of related models that help us deeply understand and analyze these special decision-making environments. The following topics will be covered extensively: expected utility theory, theory of incentives and contracts, moral hazard, adverse selection, signaling.

ECON331701
Economics of Inequality
Sanzenbacher, Geoffrey T
Fall 2022
The course will provide both a theoretical and empirical analysis of economic inequality. This will include analysis and discussion of recent trends in inequality and an examination of the economic causes and consequences of inequality. Specific attention will be paid to the difference between inequality of economic outcomes (e.g., employment status, earnings, and occupation) and inequality of economic opportunity. The course will also touch on economic policy, including discussions of programs designed to combat inequality of outcomes, like welfare and food stamps, as well as those designed to combat inequality of opportunity, like Head Start.

Credits: 3
Room and Schedule: Gasson Hall 203 MW 01:30PM-02:45PM
Satisfies Core Requirement: None
Prerequisites: ECON2201 and ECON2228 or This course requires Micro Theory and
Econometrics as pre-requisites. Student who have taken Honors Micro Theory ECON2203 have fulfilled the pre-requisite requirement for ECON2201.

**ECON332401**  
**Money and Financial Markets**  
**Kazemi, Hossein S**  
**Fall 2022**  
This course covers topics such as the significance and multiple functions of money in the economy, the behavior of interest rates, the banking system, financial markets, and the management of financial institutions. This course further covers the Federal Reserve System and the conduct of monetary policy, different asset classes, the foreign exchange market, and the international financial system. There is a heavy emphasis on use of market data and the analysis of economic releases--earnings reports, government policy statements, etc.--to provide a comprehensive introduction to the subject. Moreover, through an extensive use of Bloomberg in this class students learn how to access and analyze data and economic releases to provide a window into how modern practitioners in the discipline analyze financial markets. Prerequisites: macro theory and econometrics

**ECON334001**
**Labor Economics**  
Kazarosian, Mark V  
**Fall 2022**
This course will introduce students to the methodology of labor economics from both institutional and neoclassical perspectives. The principal emphasis will be on neoclassical theory and empirical work dealing with the supply and demand for labor; the operation of the labor market; the determination of wages; and the impact of trade unions and collective bargaining. Special emphasis will be placed on applications of theory and empirical findings to policy questions. This course requires research writing.

Micro Public Policy Analysis
Quinn, Joseph F
Fall 2022
This is a seminar on the economic analysis of current microeconomic public policy issues. During the first half of the course, students will read and discuss articles on selected topics and prepare first drafts of papers on topics of their choice. The second half of the course will be run like a professional economics conference. Students will read and critique others' papers, present their drafts to the class, and revise their papers on the basis of the comments received.

ECON337001
Topics in Applied Econometrics
Maxwell, C C
Fall 2022
This is an advanced econometrics/data analytics course and extends ECON2228. Selected topics include linear and non-linear least squares estimation as well as maximum likelihood estimation, including logit/probit, ordered logit/probit and poisson/negative binomial count regression models. A term-long research project is an important part of the course and will entail in-class presentations as well as a submission at the end of the semester. The analytics in the course will be Stata-based, but students in doing their own work, should feel free to work in R, SAS, Python, or whatever their statistical language of choice might be. Examples and datasets are drawn entirely from the sports world. Limited enrollment.

Impact Evaluation in Developing Countries
Cichello, Paul L
Fall 2022
Enrollment limited; significant writing/research component. This course reviews advanced econometric techniques and research designs used to estimate the causal effect of programs or policies implemented in developing countries. Fixed effects, difference-in-difference, instrumental variable, and propensity score methods are discussed as are regression discontinuity, natural experiment, and randomized experiment designs. The economic rationale for such programs is also addressed. Topic areas include health, education, service delivery, insurance, and micro-finance.

ECON338201
Introduction to Computational Investing
Law, Tzuo H
Fall 2022
Mandatory two-hour lab required with course, which meets W 7-9 PM. This class will cover "crypto" using Bitcoin as a leading example. Nakamoto Consensus combined previously known but seemingly unrelated elements of voting, data structures, and cryptography to enable record keeping without the presence of a central authority. This decentralized record keeping is not perfect. There are significant concerns surrounding its throughput, security, centralization, equity, environmental impact, and institutional compatibility, to name a few. Regardless, it is perhaps an understatement that consensus secured systems show promise in solving problems differently (not necessarily better). This class explores these topics from first principles. To understand the macro implications of this new and emerging technology, students will reinvent the technology from the ground up. This class requires substantive programming ability.

Students with no programming background are encouraged to take CS1 or CS2 as a companion course.

ECON772001
Math for Economists
Ireland, Peter N
Fall 2022
"Economics studies the efficient allocation of scarce resources." It follows almost immediately from this definition that while verbal and graphical analyses are often helpful too, economists derive their sharpest and most powerful results by setting up and solving constrained (because resources are "scarce") optimization (because allocations should be "efficient") problems. Hence, this course introduces first-year graduate students to variety of techniques for doing just that: setting up and solving constrained optimization problems. Specific methods covered include those based on the Kuhn-Tucker and envelope theorems, the maximum principle, and dynamic programming. Note that since this is a "math for economists course", its emphasis is not so much on stating and proving theorems but on developing an intuitive understanding of how and why each method works and determining when one particular approach may be easier or more convenient than all others to apply to a specific problem.

ECON775001
Macroeconomic Theory I
Schiantarelli, Fabio
Fall 2022
The course covers the standard models of exogenous and endogenous growth, mostly in a deterministic setting: The Solow-Swan model without and with human capital, the Ramsey growth model with infinitely lived optimizing agents, overlapping generation models without and with altruism, fiscal policy, models with human capital, basic AK models of endogenous growth, two sector models of endogenous growth, product variety models and Schumpeterian growth models. We will also review some crucial empirical papers on applied growth, starting from those on the fundamental causes of growth. In the last part of the course we cover the Ramsey model in discrete time with a stochastic technology shock and the choice of investment with adjustment costs and consumption in a stochastic setting.

ECON885301
Industrial Organization I
Murry, Charles T
Fall 2022
In this course, we study imperfect competition among firms, emphasizing empirical work. We learn how to implement empirical methods commonly used in Industrial Organization (IO), and how to read, and ultimately write, papers in empirical IO. Topics covered include demand estimation, entry, auctions, bundling, vertical control and contractual arrangements, retailing and inventories, U.S. merger policy, health markets, and others as time allows. Each topic is organized around recent empirical work. Throughout, we consider the importance of identification in empirical studies.

ECON887201
International Finance
Valchev, Rosen Z
Fall 2022
The course provides an introduction to international finance, spanning from the classic puzzles to current research. It is designed for Ph.D. students in their second year or later, and provides an overview of theory and empirical tools for conducting research in this field. We study two overarching themes: First, exchange rate dynamics and second, international risk sharing and financial integration.

ECON887901
Game Theory and Applications
Ekmekci, Mehmet
Fall 2022
In this elective advanced Graduate Class, we will cover many topics and problems that fall under the category game theory with more emphasis on dynamic games and repeated games. Although we will study some topics of dynamic games with complete information, there will be a disproportionate weight on problems with asymmetric information, and problems in which there are elements related to learning. More specifically, we will study Repeated Games, Reputation Games, Bargaining, Experimentation and Information Aggregation. Students should have a strong background in Mathematical tools used in economics, and should have taken an advance undergraduate course in Game Theory, and/or first year Graduate Micro sequence.

ECON110101
Principles of Economics
Erbil, Can
Spring 2023
This course is an analysis of prices, output, and income distribution through the interaction of households and business firms in a modern Western economy. It also includes an analysis of national income and employment, economic fluctuations, monetary and fiscal policy, inflation, growth, and international aspects of macroeconomic policy. The appropriate role of government intervention is examined, and basic analytical tools are applied to current economic problems. Open to freshmen, sophomores, and juniors. Course is open to seniors by department permission.

Assigned, Dept
Spring 2023
This course is an analysis of prices, output, and income distribution through the interaction of households and business firms in a modern Western economy. It also includes an analysis of national income and employment, economic fluctuations, monetary and fiscal policy, inflation, growth, and international aspects of macroeconomic policy. The appropriate role of government intervention is examined, and basic analytical tools are applied to current economic problems. Open to freshmen, sophomores, and juniors. Course is open to seniors by department permission.

Credits: 0

**The State of Affordable Housing in the States**

Van Meter, Robert H
Spring 2023
Course offered for Sophomores only. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

ECON220801
Economic Justice: A Catholic Approach
Piderit, John
Spring 2023
The normal focus of economics is on efficiency in the development and use of scarce resources as well as the determination of rewards paid to factors of production such as labor and capital. In some economics courses attention is given to a country's distribution of income, although usually without any economic or philosophical justification for what constitutes a fair distribution of income. This course identifies guiding principles that are rooted in a vibrant Judeo-Christian tradition stemming from the Old and New Testament. These principles constitute the foundation for general norms that help identify components of the common good of a society and that guide the distribution of goods among individual nation states, between generations, and between people of one century with people of future centuries. They also suggest how to balance rewards for people or firms that develop new products, and they yield broad boundaries within which economies should function to protect the environment. Finally, any just society requires much more than free markets and a system of law and governance. The course proposes an ethical code for workers in free-market societies, a code based on making sure that all people have reasonable economic resources to pursue basic human goods in their personal and community lives.

**ECON221201**  
**Geographic Information Systems for Planning and Decision-Making**  
**Cohen, Will W**  
**Spring 2023**
Large quantities of information are available to describe our social and physical environment with high detail, but making sense of this data requires specialized skill sets. Geographic Information Systems (GIS) is a general approach to analysis and is a powerful set of tools for understanding complex problems or for making a compelling argument about issues grounded in the physical or social environment. It is widely used in the public and private sectors. This course will introduce students to the use of GIS and representation as a means of looking at and representing spatial data. Students will learn how to perform the three broad steps of spatial analysis: 1) collecting and organizing data, 2) analyzing this data for appropriate patterns, and 3) using software to represent data on maps to support decision making. STEM-designated.

ECON223101
Financial Forecasting
Mc Gowan, Richard, SJ
Spring 2023
The theory and practice of applied time series analysis will be explored. First the different segments (trend, seasonality, cyclical, and irregular) of a time series will be analyzed by examining the Autocorrelation functions (ACF) and Partial Autocorrelation functions (PACF). The specifics model to model the various types of time series include linear regression, panel regression, seasonal decomposition, exponential smoothing, ARIMA modeling as well as combining models. This course is offered as an online hybrid course. In addition to the online lectures presented on the Canvas LMS, there are three required on-campus class meetings on Saturday mornings. Please see the course syllabus for additional details.

ECON224201
Public Policy in an Aging Society
Quinn, Joseph F
Spring 2023
We live in a rapidly aging nation. In two decades, the age distribution of the U.S. will look like that of Florida today. We will analyze the underlying demographic trends, the economic status of the aged, the fiscal challenge of an aging society, public policies (especially social insurance) designed to assist older Americans, the impact of public policy on individual behavior, and proposals for reform.

**ECON224601**  
Impact of News on Financial Markets  
Kazemi, Hossein S  
Spring 2023

The impact of news on financial markets is examined in this course. More specifically, this course studies how Central Banks and Financial Markets react to economic and financial news. Using tools of economics and finance, the impact of macroeconomic data releases, business and financial news, as well as domestic and global political news on the financial markets will be measured and evaluated in this course. It further examines how the markets, including bonds, equities, commodities and foreign exchange markets, react to the news.

ECON26901  
Aspects of Economic Growth  
Ulusoy, Veysel  
Spring 2023  
This course aims at providing both the theory and empirics of modern economic growth theories. In addition to Classical and Neoclassical economic growth approaches, current views such as endogenous growth theory will be discussed. Emphasis will be placed on why some countries lag behind others and ways to solve this problem. The factors that are affecting economic growth such as technology, capital accumulation, change in employment, education, human capital, saving, energy consumption, democracy are studied in detail. The course also addresses the role of financial markets and policy formulation of economic growth.

ECON287601
Development and Social Justice in Korea
Hwang, Ingu
Spring 2023
This course introduces students to the political and economic changes that South Korea experienced from the 1960s to the present and explores how these changes contributed to social unrest, to demands for greater democracy, and to other social justice issues. In doing so, it will address how South Korea's economic and political trajectory was informed by pressures at the international, national, and sub-national level and compare the South Korean case to that of other Asian nations.

Economics of Education
Sankaran, Chandini
Spring 2023
This course combines economic theory, econometric literature, and institutional literature to examine current issues in U.S. education. Topics include: The basic theory of investments in education (human capital theory); disentangling the return to education from the return to innate ability; the role of education in individual mobility and national economic growth; the association between education and individual earnings and reasons why that relationship has changed over time; the role of early childhood education; the main approaches to K-12 school reform (money, choice, educational standards, and teacher selection/training); higher education and higher education policy. We will also discuss teacher assessment methods, computers in education, and the effectiveness of different teaching methods. Prerequisites: micro theory and econometrics.

ECON330801
Game Theory in Economics
Sonmez, Tayfun O
Spring 2023
This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

**ECON331201**  
**Evolutionary Economics**  
**Cox, Donald**  
**Spring 2023**  
This course uses evolutionary biology to better understand the psychology of preferences, a central concept in economics. Why are people risk averse? Impatient? What explains novelty seeking, habits, addictions? What makes parents provide for children? We will use evolutionary thinking to explore these and a host of other diverse topics: violence, adolescent risk taking, sexual behavior, mating preferences, marriage and divorce, rearing and investing in children, extended families, trade and specialization, cooperation and conflict, cults and gangs, religion, and interactions between genetic and cultural forces. This course has an intensive research and writing requirement and enrollment is limited. You should be comfortable using Stata.  
**Prerequisites:** Micro theory and econometrics.

**Credits:** 3

In some economic situations, agents do not have all the information they need to make a decision, hence they need to decide under uncertainty. Furthermore, some agents may have better information than others. These information asymmetries have important effects in economic environments and institutions. Some examples are hiring and employment, business contracts, insurance, property rights, entrepreneurship. This course aims to cover a series of related models that help us deeply understand and analyze these special decision-making environments. The following topics will be covered extensively: expected utility theory, theory of incentives and contracts, moral hazard, adverse selection, signaling.

Credits: 3

**Money and Financial Markets**

**Kazemi, Hossein S**

**Spring 2023**

This course covers topics such as the significance and multiple functions of money in the economy, the behavior of interest rates, the banking system, financial markets, and the management of financial institutions. This course further covers the Federal Reserve System and the conduct of monetary policy, different asset classes, the foreign exchange market, and the international financial system. There is a heavy emphasis on use of market data and the analysis of economic releases--earnings reports, government policy statements, etc.--to provide a comprehensive introduction to the subject. Moreover, through an extensive use of Bloomberg in this class students learn how to access and analyze data and economic releases to provide a window into how modern practitioners in the discipline analyze financial markets. Prerequisites: macro theory and econometrics

ECON332601
Experimental Economics
Coffman, Lucas
Spring 2023
This course is for anyone who wants to be able to answer questions using experiments. This course is an introduction to experimental methods, particularly those developed by economists. We will discuss in detail all of the steps of an experiment, from design, measurement and randomization, to cost and power analyses. This is strictly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods, not a foundation of famous experimental results. Nonetheless, we will cover experiments in a variety of interesting fields: behavioral economics, economics of developing countries, discrimination, labor economics, cognitive and social psychology, and more. There are two main value-addeds from this course. First, you will be equipped to design and run an experiment to answer important questions. Second, in understanding what the optimal experimental design should look like, you will be armed with better lenses through which to view naturally existing data.

ECON334901  
Managerial Economics  
Tomic, Aleksandar S  
Spring 2023
This integrative course will build on students work in Microeconomic Theory and Econometrics and provide application of those skills to problems in managing organizations, whether business or non-profit. Course will tie the Micro Theory concepts to management and strategy and will examine consumer behavior, production functions, costs, market structures, pricing behavior, government regulation, and investment decisions within organizations from an empirical perspective. To accomplish this, students will engage in Econometric estimation at an intermediate level (estimate, diagnose, and fine-tune the models) where they will estimate relevant functions before engaging in optimization efforts. Students will be introduced to numerical approach to optimization and will also engage in forecasting exercises where they will be introduced (or review) most commonly used forecasting methods with an eye toward real-world application. Finally, students will explore the connection of Micro Theory to strategy through use of tools such as Porter's Five Forces. In all, students will be able to apply their economic and econometric skills to the world around them. Pre-requisites: Microeconomic Theory, Econometrics.

ECON337501
From Stone Tools to Robots: Economic Growth and Development
Guerron, Pablo A
Spring 2023
This class explores economic growth over the past millennia. For most of its history, humanity did not experience the type and quality of life, as we know it today (e.g., electricity, running water, medicine, telecommunications, and transport). It is only during the second half of the 18th century when Europe (and later U.S.) started to see economic growth. This growth started with the Industrial Revolution. In the first part of the course, we will study models that explain why economic growth is such a recent phenomenon. We will rely on models such as those proposed by Malthus to understand why the world did not grow at all for most of 5 millennia. We will also explore models that help us to understand the explosive economic growth experienced by the U.S. in the 19th and 20th centuries (and other countries more recently). As a by-product, there will be some discussion on the recent slowdown affecting most Western economies (the so-called Secular Stagnation). Importantly, we will talk about the increasingly reliance on automation for production in the so-called 4th Industrial Revolution. That is, the impact automation may have on employment, welfare, and society. For example, we will explore how automation is contributing to inequality. A crucial part of the course is to understand how research and development (R&D) and innovation contribute to growth. Therefore, the second part of the course will be devoted to study R&D at the aggregate (macro) level but also at the industry level. We will use case studies in, for example, the pharmaceutical sector to study why R&D is such a crucial factor for growth but also difficult to implement and predict its impact on firms and ultimately on the economy. We will study the current development of vaccines and treatments for Covid-19. In addition, we also analyze the role of automation and big data (data mining, and machine learning) in R&D. As will become clear, programming is a vital skill in the 4th Industrial Revolution. To prepare students for this shifting labor landscape, students will learn Python to manipulate data and solve models. An example of this is to compute productivity using data from national accounts for different countries.

ECON337601
International Economic Relations
Anderson, James
Spring 2023
Not open to students who have taken ECON3371 or ECON3372. This course introduces the study of economic relations among countries. It combines material contained in ECON3371 and ECON3372, and substitutes for both those courses. Primarily designed for international studies majors, it is also appropriate for economics and other social science majors, with the proviso that the comprehensive coverage of the course implies that the workload is heavy and expectations for students are high. Topics include the determinants of trade in goods, services, and capital; the economic policies that nations use to influence such trade; the theory and practice of international macroeconomics; and problems of coordinating macroeconomic policies among countries. The course features the usefulness (and limitations) of game theory for explaining international economic interactions.

ECON337901
Financial Economics
Ireland, Peter N
Spring 2023
This undergraduate elective focuses on financial economics, with specific emphasis on asset pricing and the valuation of risky cash flows. After developing and studying the details of consumer decision-making under uncertainty, it uses that general framework as a basis for understanding both equilibrium and no-arbitrage theories of securities pricing, including traditional models like the capital asset pricing model (CAPM), newer Arrow-Debreu theories, and, if time permits, arbitrage pricing theory (APT), the consumption capital asset pricing model (CCAPM), and martingale pricing methods.

ECON339101
Economics of Energy and the Environment
Sweeney, Richard L
Spring 2023
This course provides an overview of recent research in energy and environmental economics, with an emphasis on connecting policy questions of interest to available data and econometric methods. In the context of specific markets, we will first review the theoretical justifications for government intervention. We will then turn to the empirical evidence to see what recent economic scholarship has to say about a variety of energy policy questions, including: Should we ban fracking? Do oil pipelines reduce property values? What is the best way to promote renewable energy? Should we be more energy efficient? Students will be required to read and discuss academic articles each week, as well as write an empirical term paper.

ECON777201
Econometric Methods
Lewbel, Arthur
Spring 2023
This course provides an understanding of the econometric theory that underlies common econometric models. The focus is on regression models and their many extensions. Topics include finite and asymptotic properties of estimators, consistency and limiting distributions, specification issues, heteroskedasticity, autocorrelation, endogeneity and simultaneity, and nonlinear model estimators including maximum likelihood and the generalized method of moments.

**Credits:** 4

**ECON885601**  
**Experimental Economics**  
**Coffman, Lucas**  
**Spring 2023**  
This class is an introduction to experimental methods in economics. We will cover all the steps of an experiment from design, measurement, and randomization to practical considerations like cost and power analyses. This is mainly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods (e.g., lab, field, and online studies, experiments in developing countries, interventions in organizations, and so on). The course is not intended to provide a foundation of famous experimental results overall or for any one topic. The take-away of the course is to develop the ability to design a confound-free experiment regardless of question or context.

**Credits:** 3  
**Room and Schedule:** Maloney Hall 330 F 10:00AM-12:30PM  
**Satisfies Core Requirement:** None

ECON887301
Empirical Methods in Macroeconomics and Finance
Guerron, Pablo A
Spring 2023
We will study econometric models and methods that are useful to conduct substantive empirical research in macroeconomics and finance. We consider the estimation and evaluation of dynamic stochastic general equilibrium models, analysis of linear and nonlinear vector autoregressive models, time series models with regime switches and time-varying coefficients, as well as dynamic factor models. For the most part, we will focus on Bayesian methods of inference, with detailed discussions of suitable Markov-Chain- Monte-Carlo methods.

ECON887401
International Macroeconomics
Nosal, Jaromir B
Spring 2023
This course will focus on the construction of models for understanding the international business cycle and analysis of macroeconomic policy in open economies. The first part will focus on the transmission of macroeconomic shocks across countries, from the international real business cycle literature to models with nominal rigidity and financial imperfections. The second part will cover the recent literature on macroeconomic policy in open economies. The third portion of the course will return to model building and shock transmission and focus on the recent literature at the intersection between international trade and macroeconomic theory.

Innovation through Design Thinking
Rutirasiri, Chokdee R
Fall 2022
Would you like to be innovative in whatever you pursue? Innovation is about solving important and complex problems to create value for the greater good. Innovating through design thinking is a structured, human-centered process for creatively solving problems, which can be adopted by anyone. In this foundational course we will introduce the mindset, process and methods at the core of design thinking. Students will see inspiring case studies, hear from cutting edge practitioners, and work on a project to internalize this learning. Students will discover design thinking is a practical toolkit that helps them reliably innovate in the face of changing social needs, business disruptions, and technology shifts.

ENGR180101
Making the Modern World: Design, Ethics & Engineering
Gaudette, Glenn R
Fall 2022
Together we will consider how engineers and other stakeholders navigate risks related to industrial and environmental disasters; balance financial, technological, and regulatory pressures associated with complex socio-technical problems; and negotiate technical and political liabilities surrounding artificial intelligence, surveillance, and climate adaptation. Students will collaborate on group design projects based on human-centered engineering. Engineering systems present pressing technical, ethical, and moral problems that we must grapple with as engaged global citizens. In this class students will explore the social, cultural, and institutional history of engineering; learn foundational skills in quantitative analysis of real-world engineering designs; and understand the political, environmental, economic, and ethical tradeoffs associated with building the modern world. This is a Complex Problems course and includes a required lab and reflection.

ENGR180104
Making the Modern World: Design, Ethics & Engineering
Powell, Russell C
Fall 2022
Together we will consider how engineers and other stakeholders navigate risks related to industrial and environmental disasters; balance financial, technological, and regulatory pressures associated with complex socio-technical problems; and negotiate technical and political liabilities surrounding artificial intelligence, surveillance, and climate adaptation. Students will collaborate on group design projects based on human-centered engineering. Engineering systems present pressing technical, ethical, and moral problems that we must grapple with as engaged global citizens. In this class students will explore the social, cultural, and institutional history of engineering; learn foundational skills in quantitative analysis of real-world engineering designs; and understand the political, environmental, economic, and ethical tradeoffs associated with building the modern world. This is a Complex Problems course and includes a required lab and reflection.

**Credits:** 0

ENGR210101
Engineering Foundations Studio I
Gaudette, Glenn R
Fall 2022
This course is designed to help students begin to mechanically analyze the physical objects in the world around them. Students will learn how to look at systems and determine how to model the forces and reactions for statically determinate systems. The course will also cover math topics including integrals and their applications, vectors, vector functions, vector calculus (introductory level). Fundamental themes of materials science-- structure-property-processing relationships in materials, specifically metals, ceramics, and plastics will also be investigated.

Credits: 3
Room and Schedule: 245 Beacon Street Room 311 MWF 02:00PM-02:50PM

ENGR210201
Engineering Foundations Studio II
Govindasamy, Siddhartan
Fall 2022
Students in this course will further their knowledge and understanding of circuit elements such as resistors, capacitors, inductors, diodes and transistors. Students will learn to apply tools such as the Kirchoff current and voltage laws to analyze circuits, differential equations to analyze and design filters and analyze the frequency responses of circuits. Mathematical techniques such as solving first and second order differential equations, and the Fourier transform will be introduced in context of circuit applications.

**Credits:** 3

Engineering Courses: Spring 2023

ENGR102501
Innovation through Design Thinking
Rutirasiri, Chokdee R
Spring 2023
Would you like to be innovative in whatever you pursue? Innovation is about solving important and complex problems to create value for the greater good. Innovating through design thinking is a structured, human-centered process for creatively solving problems, which can be adopted by anyone. In this foundational course we will introduce the mindset, process and methods at the core of design thinking. Students will see inspiring case studies, hear from cutting edge practitioners, and work on a project to internalize this learning. Students will discover design thinking is a practical toolkit that helps them reliably innovate in the face of changing social needs, business disruptions, and technology shifts.

**ENGR110101**  
**Introduction to Human-Centered Engineering**  
**Hira, Avneet**  
**Spring 2023**

In this course, we will learn about and practice engineering methods to tackle design problems through a human-centered lens. These methods include introductory work with: mathematical models, statistics, physical prototyping, computer-aided design, decision-making approaches, and observation and interview techniques. We will learn how these methods can be employed while working on a design problem, including problem formulation, data analysis, design trade-offs, concept selection, and design deployment. At the end of this course, we will have a working understanding of how human-centered engineers think and work.

**Credits:** 4  
**Room and Schedule:** 245 Beacon Street Room 311 MWF 12:00 Noon-01:50PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** Open to Human-Centered Engineering Majors Only.

ENGR110301
Engineering Analysis Lab
Ranger, Bryan J
Spring 2023
In this course, students will apply integral calculus and scientific principles to develop analytical solutions for engineering problems. Students will learn how to devise experiments, collect and analyze data, and conduct basic error analysis. The course will be structured as individual experimental modules to get hands-on experience with fundamental instruments including power supplies, sensors, electromechanical components, and computer-based data acquisition systems. Following this course, students will be equipped to apply quantitative analytical techniques to a variety of practical engineering problems.

**Credits:** 2

**Room and Schedule:** 245 Beacon Street Room 302 M 10:00AM-10:50AM

Engineering Computation and Programming
Govindasamy, Siddhartan
Spring 2023
In this course, students will be introduced to computational tools used in engineering through the MATLAB computing and programming environment. Students will also learn and apply fundamental concepts from linear algebra to solve engineering problems computationally. Topics to be introduced include loops, functions, arrays, matrices, and vectors. Students will be expected to complete weekly assignments and a final project in which students will use the MATLAB computing environment to solve an appropriately scoped computing/engineering problem.

ENGR210301
Engineering Foundations Studio III
Salifu, Ali A
Spring 2023
In this course, students will be introduced to fluids, transport phenomena, and thermodynamics. Students will first learn about mass transport and conservation of mass and momentum before exploring the relationship between mass balance and fluids and transport. This knowledge will then feed into discussions of thermodynamics to elucidate how systems interact with their surroundings. Students will be expected to understand the concepts of mass balance, fluid flow, laws of thermodynamics, internal energy, work, enthalpy, entropy, and heat transfer.

ENGR210401
Engineering Foundations Studio IV
Krones, Jonathan S
Spring 2023
In this course students will be introduced to the analysis of complex engineering systems in the real world. Students will learn several quantitative methods for modeling engineering systems including simple and complex networks and material flow analysis. Mathematical concepts of probability and statistics such as Poisson processes, return periods, and error propagation will be applied to various engineering domains. Students will also be introduced to engineering economics and life cycle assessment for situating engineering decisions within their economic, social, and environmental contexts.

ENGL101001  
First Year Writing Seminar  
Hincks, Martha M  
Summer 2022  
Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

Credits: 3  
Room and Schedule: On-line Asynchronous  
Satisfies Core Requirement: Writing

ENGL108001
Literature Core
DeRosa, Marla C
Summer 2022
In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: www.bc.edu/literaturecore

Credits: 3
Room and Schedule: June 27-August 5; OTE Program Only; Stokes Hall 403N MTuThF 09:00AM-11:30AM
Satisfies Core Requirement: Literature
Prerequisites: None

ENGL340101
Science Fiction
Kaplan-Maxfield, Thomas
Summer 2022
This is a course on the genre of literature known as "Science Fiction," "SF," or "sci." Since this is a genre course, we will spend a bit of time discussing the definition of sci-fi, how there are many definitions that are not agreed upon, and what that tells us about the type of literature. We'll set the genre within the historical context of Enlightenment Rationalism and Romanticism’s response to it, early nineteenth century Industrialism and the rise of machines. Class will consist of a bit of lecture followed mainly by discussions of the stories and books, within the terms set out above. We will read stories from Wells and Verne and novels from Asimov to Butler to see what sci-fi tells us about ourselves and where we are going. Three papers required plus a midterm and final.

ENGL441201
Writing Workshop: Creative Nonfiction
Roberts, Susan A
Summer 2022
Over the past few decades, the best nonfiction being written has expanded to include not only such traditional forms as argument and exposition but also the mixed modes of creative nonfiction. As an intermediate-level course, we will build on the work of the First Year Writing Seminar and hone the skills needed in advanced writing electives. Students in this course choose their own topics and explore the range of possibilities now available to the nonfiction writer.

Limited to 15 students; Satisfies core requirement for writing; Department Permission Required

This course, the first half of a year-long sequence of core English courses, is designed for students whose first language is something other than English. In this workshop, students will develop a portfolio of personal and academic writing and provide ongoing feedback to one another as part of a writing community. They will write and rewrite essays throughout the semester, discuss their works-in-progress, and receive feedback during individual conferences with the instructor. Students read a wide range of texts and consider the structure and organization of English rhetoric as they work to develop their own prose. Seats are prioritized for students who have been recommended for targeted language support. This course may be taken in place of ENGL 1010. Students place into this course based on BC's English Writing Assessment taken during the summer prior to freshmen year or in consultation with the director of the program, lynne.anderson@bc.edu

ENGL108001
Literature Core
Kirschner, Elizabeth M
Fall 2022
In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one’s own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student’s capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: www.bc.edu/literaturecore

ENGL108013
Literature Core
Ainsworth, Treseanne
Fall 2022
In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see:www.bc.edu/literaturecore

**ENGL109301**  
**An Introduction to Modern Irish I**  
**Cahill, Sean R**  
**Fall 2022**  
This course continues in second semester as ENGL1094. This course offers beginners an enjoyable introduction to the language and culture of Ireland. We'll learn how to speak Gaelic and read modern Irish texts and poetry. And we'll examine major themes in Irish history and culture associated with the rise and fall of the language over its long history. This course counts towards your Irish Studies minor, and one towards your English major. In the spring semester, you can build on what you've gained and, if you wish, satisfy the Morrissey College of Arts and Sciences language proficiency requirement by completing the four-course cycle the following year.

**Credits:** 1  
**Room and Schedule:** Stokes 103S; TuTh 09:00AM-10:15AM

ENGL118001
Lit Core: From Slavery to Mass Incarceration
DeRosa, Marla C
Fall 2022
This section of Literature Core will focus on narratives that speak to questions of slavery, incarceration, and freedom--both literal and metaphorical. The current pandemic along with the mass demonstrations against systemic racial injustices will provide a particular backdrop and context from which to consider these questions and issues. The course will start with historical and political writings about slavery from the 1800s and the social contexts in which these writings were produced and consumed. We will then move on to historical and contemporary fiction and film that informs and challenges our historical understanding of slavery and the relationship between slavery and our current system of incarceration. Course texts may include Homegoing (Yaa Gaysi), The Narrative of the Life of Frederick Douglass, David Walker's Appeal, Beloved (Toni Morrison), Kindred (Octavia Butler), The Nickel Boys (Colson Whitehead), and Just Mercy (Bryan Stevenson).

**Credits:** 3  
**Room and Schedule:** Stokes Hall 109S TuTh 10:30AM-11:45AM

ENGL118401  
**Lit Core: Literature, Testimony, Justice**  
**Harrison-Kahan, Lori**  
**Fall 2022**  
This section of Literature Core will explore how literary texts bear witness to historical events and address social issues. Through the study of poetry, fiction, drama, and autobiography, we will examine how writers have used a variety of literary genres and forms to transform traumatic memories and the experiences of displacement and oppression into art. Topics include slavery and the Holocaust. Texts may include Herman Melville's Benito Cereno, Narrative of the Life of Frederick Douglass, Toni Morrison's Beloved, Art Spiegelman's Maus, Tommy Orange's There There, and The Laramie Project.

**Credits:** 3  
**Room and Schedule:** Stokes Hall 115N TuTh 10:30AM-11:45AM

ENGL118701
Lit Core: Narratives of Slavery
Frederick, Rhonda
Fall 2022
Featuring film, visual art, and popular fiction, this course explores histories and legacies of slavery in the United States. In addition to looking at how our range of creative forms narrate US slavery, we will consider how creative depictions of the institution allow us to think differently and more critically about the racial and gendered identities defined and refined in US slavery as well as intra-/inter-racial relationships that derive from them. In Narratives of Slavery, students will examine how whiteness and white privilege were defined, then organized to empower and serve the master class; how whiteness as a racial/class category made blackness, and how the resulting power/privilege dynamic is visible in our primary texts, and reflected in our current social and political contexts. By the end of the semester, students will hone the following skills: read and interpret different types of creative narratives, debate and test ideas in class discussion and in written essays, make use of secondary sources to interpret primary narratives, and identify how legacies of slavery manifest in 21st century US. Assignments include short response papers, one longer essay (developed from a response paper), and a take-home midterm exam.

ENGL150301
**Beyond Price: Markets, Cultures, Values**
Seshadri, Kalpana R
**Fall 2022**
This course is about wealth and value—the condition of our knowing the price of everything and the value of nothing. Given the glamour and power surrounding money and the super-rich, we examine issues concerning the economy, values, and the dominance of the market over our environment and personal lives. We look at markets, incentives, ecology and ethics through a combination of literature and economics. We also take up specific case studies that will enable us to better understand the relation between business decisions or market interests and their impact on the ordinary lives of working men, women, and children.

**Credits:** 3

ENGL171201
Roots and Routes: Reading Identity, Migration, and Culture
Graver, Elizabeth
Fall 2022
How does migration in today's world shape questions of identity, borders, belonging and lead to a reimagining of home? We will read a range of fiction, nonfiction, and poetry (including spoken word poems) by authors whose migration stories to the United States offer multiple ways to think about what it means to be an outsider and build a new life and home. We will explore our own migration stories, the routes that brought us here and the ways in which our family roots shape our identities. Some of the questions we will consider include: What are the gifts and challenges of making a home across cultures? Of being multilingual? What do you know, and what don’t you know, about your own family’s migration story, whether recent or more removed? How might that story intersect with the topics we encounter in our texts? How does the writer Chimamanda Ngozi Adichie’s TED Talk on the danger of the single story invite us to ask questions about power, memory, silence, and voice? What does it mean to migrate in a globalized, wired, yet often divided world. Reflection sessions will include an author talk, a museum visit, creative writing, and several shared meals.

**Credits:** 3  
**Room and Schedule:** Stokes Hall 101N TuTh 12:00 Noon-01:15PM

ENGL172401  
**Nature and Power: Reading the American Place**  
Matson, Suzanne M  
**Fall 2022**
Writers since Meriwether Lewis have tried to know the great diversity of American landscape through acts of language. In this course we'll ask how poems, essays, and fiction depict American encounters with nature: As the unknown other to be conquered? As access to a spiritual dimension? As a site of contested claims for use and power? How have these many meanings we've assigned our landscapes shifted in the face of environmental degradation? Our readings, discussion, and writing will focus on how the American psyche has been influenced by both a fear of, and a love of, what is "wild."

In this course we'll ask how poems, essays, and fiction depict American encounters with nature: As the unknown other to be conquered? As access to a spiritual dimension? As a site of contested claims for use and power? How have these many meanings we've assigned our landscapes shifted in the face of environmental degradation? Our readings, discussion, and writing will focus on how the American psyche has been influenced by both a fear of, and a love of, what is "wild."

ENGL172901
The Role of Literature in Understanding the Complex Meaning of Justice
DeRosa, Marla C
Fall 2022
This is an Enduring Questions course and is open to FRESHMEN only. You must take UNAS1719 with this course. What can literature tell us about the complex interactions between individuals and the law? What are the links between values, ethics, religious beliefs, and the law. How do various authors grapple with the complex interplay of these elements? In what ways can literary texts serve as an argument for justice or a polemic against injustice? In this course we will read a range of fiction and nonfiction narratives that examine the meanings of justice and the role of individuals within a legal system. We will work to understand why societies enact laws and whose interests those laws serve. We will also examine the role of lawyers, judges, and litigants and the complex dilemmas they face in both upholding laws and pursuing justice. In the context of the United States, we will specifically examine texts that address the intersection of race, justice, and the legal system. Major Course texts include: Beloved (Toni Morrison), The Nickel Boys (Colson Whitehead), The Merchant of Venice (Shakespeare), To Kill a Mockingbird (Harper Lee), A Civil Action (Jonathan Harr), Just Mercy (Bryan Stevenson). Students will further develop their close reading and analysis skills, but also understand that literature is tied to and influenced by the historical and social contexts in which it is both created and read. This broader understanding of literature will encourage students to consider the cultural work that literary texts can do in the pursuit of justice. Students will further develop their close reading and analysis skills, but also understand that literature is tied to and influenced by the historical and social contexts in which it is both created and read. ENGL173501
What does a city--this city in which we find ourselves--mean? Meaning flows through a city just as populations, capital, power, resources, and ideas do, and each of these flows conditions the others. As we consider what Boston has meant in different moments and to different people, we engage follow-on questions: How does the form of a text express meaning? How can we understand the relationship between that text and the historical moment in which it took form, and/or the historical moment it seeks to capture? What happens when we consider the local in relation to national and international events and artistic movements? Our students will develop skills of historical reasoning, will learn how to interpret works of literature and allied arts, and will sharpen their analytical thinking and writing skills within the disciplinary traditions of history and literary/cultural studies. We will encourage them to move beyond the received meanings and standard tropes of Boston--the accent, the city on a hill, the regular-guy mythos retailed by Hollywood--and explore questions that Boston has consistently raised about human beings and nature, race and class difference, the form and function of the good life, the double-edged quality of moral causes, and the contest between the persistence of old ways and the succession of new ones.

ENGL209701
Intermediate Modern Irish I
Nugent, Joseph G
Fall 2022
This is a continuing course in modern Irish for those with a basic knowledge of the language. We emphasize the ability to read contemporary literature in various genres. Texts from a variety of authors and historical periods allow students to taste different writing styles: contemporary fiction, journalism, literary criticism, historical and cultural texts, while we enjoy Irish-language short films and videos.

**ENGL212501**  
**Introduction to Feminisms**  
**Erol, Ali E**  
**Fall 2022**  
Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

ENGL213301  
Studies in Narrative  
Mitsein, Rebekah K  
Fall 2022
This course introduces students to questions that they might bring to the study of narrative works--primarily novels, tales, and non-fictional narratives, though it may also include drama, film, and narrative poems. It aims to introduce the various critical frames through which we construct interpretations. As part of the process of reading, students will be introduced to common critical terms; narrative genres, conventions, and discourses; the construction of the character and the ways of representing consciousness; and the ordering of narrative time. The course will also expose the student to the implications of taking critical positions.

ENGL215401
Introduction to Adolescent Fiction
Rudner, Bonnie
Fall 2022
First of all, what is a young adult? And second of all, what is a hero? We will be delving into both of these issues, as well as the relationship between them. We will be looking at heroes who function in real worlds and some who function in fantasy worlds. We will attempt to assess the impact of heroes in contemporary life, especially in relation to the young adults who need them. And are there any more heroes for our young adults? In what ways do female heroes differ from male heroes?

**ENGL215501**  
**Intro to African Diaspora Literatures**  
**Frederick, Rhonda**  
**Fall 2022**  
By studying creative writing by African writers and writers of African descent, this course examines how diasporic Africans created viable lives for themselves in the "New World." We will identify commonalities as well as discontinuities that define the experiences of African and African descended peoples in Nigeria, Canada, the US, and the Caribbean. Acknowledging that African Diaspora writers share a common set of experiences (cultural traditions, domination and resistance), we will also examine experiences that are unique to each time and place. This two-part critical process will result in a complex view of literature that derives from it.

ENGL216301
Triumphant Calamity: The Modern Condition
Bowles, Daniel J
Fall 2022
In this seminar we explore the rich time period of literary modernism (1900-1930) through German literature, film, and art. Our aim is to articulate how arts and letters variously reckoned with and gave voice to the aesthetic, historical, social, and political upheavals of an era wracked by dramatically new paradigms for modern life: technological advancement but horrific new wars, unimagined knowledge but a questioning of the very means by which we know, a novel science of the soul but growing alienation from reality and the self, new rights and privileges for the disenfranchised but stark disparities in urban and rural life. Readings include works by Nietzsche, Rilke, Kafka, Mann, Freud, and Keun, and screenings include films by Lang, Murnau, Wiene, and Sagan.

ENGL221201
Introduction to Medical Humanities
Tanner, Laura E
Fall 2022
This course will use contemporary literature as a springboard to consider the psychological, social, ethical, and experiential dimensions of sickness and health. In addition to exploring questions of illness and the body, we will address topics including disability, aging, pregnancy, pain, medical space, illness and culture, and care giving. Through the analysis of novels, poems, short stories and non-fiction, we will consider the way that bodily experiences, material conditions, and cultural constructions of normalcy shape our understanding of identity in sickness and in health.

ENGL222001
Classical Mythology
Eisenfeld, Hanne E
Fall 2022
This course explores the mythology of ancient Greece, Rome, and the Near East within its cultural, political, historical, and religious contexts. You will meet (or renew your acquaintance with) mythical figures like Zeus, Gilgamesh, Medusa, and Helen as they appear in multiple literary genres and other artistic media. In order to analyze and interrogate these myths we will use ancient and modern frameworks for thinking about what mythology is and what it does. What can a myth tell us about the civilization that created, adopted, or adapted it? What do our uses of Classical mythology--and our creations of our own myths--tell us about ourselves?

ENGL224101
Playwriting I
Cummings, Scott T
Fall 2022
This writing-intensive course offers a practical introduction to the art and craft of writing for performance. Students will engage in numerous writing exercises that highlight the special demands and opportunities of writing for the stage. Emphasis is placed on finding ways to contact and release the theatrical imagination and on mastering the basics of writing a solid dramatic scene. Exemplary plays by established playwrights will be studied as appropriate, but the overwhelming emphasis is on student writing.

Credits: 3
Room and Schedule: Gasson Hall 208 TuTh 03:00PM-04:15PM
**ENGL224601**  
*Introduction to Asian American Literature*  
*Song, Min*  
*Fall 2022*  

This course is a broad introduction to Asian American literature, criticism, and culture. This means that we will read at least one book-length work from each of the following ethnic groups: Filipino, Japanese, Chinese, Korean, South Asian, and Vietnamese. Together, the readings provide us with an opportunity to reflect on the long sweep of Asians in America struggling to give expression to their experiences. Discussion will often touch on many sensitive topics, so I wish to emphasize the importance of keeping an open mind, being respectful of others' opinions, and keeping up with the reading.

**ENGL227801**  
*American Culture: Engaging Difference and Justice*  
*Harrison-Kahan, Lori*  
*Fall 2022*
This course offers an introduction to the interdisciplinary study of American culture with an emphasis on questions of difference, justice, and power. We will concentrate on approaches, methods, and themes of interest as we assemble critical skills for making interpretive arguments about aspects of culture in their historical moment. While assembling a toolkit of interpretive moves we can make on American culture and working to build stronger analyses, we will also consider how American society and culture have been defined by differences of race, class, gender, sexuality, dis/ability, religion, and other socio-cultural categories. We will consider how American Studies scholars have combined theory and praxis in order to expose injustice in the nations past and present; form communities based on principles of inclusion and solidarity; and create just conditions for citizenship and humanity. The materials we analyze will include examples from film, television, music, literature, theater, comics, photography, advertising, among others. Each unit will be organized around a question that generates further questions, analysis, and discussion. The questions include, for instance, Why is Indigenous Studies central to American Studies?, What does visual culture tell us about race in modern America?, and How do we see race and religion after 9/11? During the semester, we will also attend a number of events sponsored by American Studies, AADS, and other interdisciplinary departments, centers, and programs that represent a variety of interests, subjects, and approaches. This course satisfies the university Cultural Diversity requirement. For English majors this course also satisfies the Literature Across Worlds requirement. Note for American Studies Minors: Students can take either ENGL2278 or or ENGL 2277: Introduction to American Studies to satisfy the introductory course requirement. (Students cannot receive credit for both courses.)

ENGL300101  
Walking Infinite Jest  
Boucher, Christopher G
Fall 2022

David Foster Wallace describes Enfield, Massachusetts--an important setting in his 1996 novel *Infinite Jest*--as "a kind of arm-shape extending north from Commonwealth Avenue and separating Brighton into Upper and Lower, its elbow nudging East Newton's ribs and its fist sunk into Allston?". Sound familiar? In this course, we'll conduct a Bostonian's reading of Wallace's opus. Students will be required to write weekly critical reading responses, and should be prepared for the course's non-traditional structure: weekly meetings will sometimes be canceled in lieu of weekend on-site meetings in Brighton and Boston.

Roberts, Susan A
Fall 2022
In this one-credit seminar we will read five novels by twentieth and twenty-first century women writers that suggest the mystery genre has much to offer in the way of literary analysis and enjoyment. Authors will include: Dorothy L. Sayers, Ngaio Marsh, Barbara Neely, Maj Sjowall, and Louise Penny. We will consider violence as a literary theme, gender norms in the genre (and their subversions), geography and journey as a central aspect of the works, as well as the allusive elements of myth and legend undergirding their structure.

ENGL311901
The Graphic Novel and Marginality
Puente, Lorenzo A
Fall 2022
This course will give students the critical skills to read, understand graphic narratives: the dynamic interrelationship between images and text to convey meaning. In particular, this course will study how writers/artists such as Art Spiegelman, Marjane Satrapi, Alison Bechdel, Gene Lueng Yang, Thi Bui, and Joe Sacco, among others, use the medium of comics to engage readers in exploring and analyzing issues of difference and justice. How do graphic artists represent issues of race and ethnicity, especially among minority communities that struggle against a long history of racist representation in the US media? How do graphic artists depict issues related to gender, sexual orientation, social class, religion, etc. This course will highlight how artists use graphic narratives to call attention to cases of humanitarian crises in the US and in different parts of the world. The medium of comics, considered marginal, lends itself to advocacy of issues of marginalized groups in society. The medium also creates space for encouraging artists as well as audiences to think otherwise, to imagine alternative social possibilities. This course fulfills the Cultural Core Diversity Requirement (Engaging Difference and Justice).

This course explores the relationship between black political movements and black attention to bodies, material relations, and the matter of everyday life. We will examine instances of black freedom movements from 1800s onward with an attention to the role and articulation of black physical movement, including the cramped cargo-movement of Henry Box Brown's escape; freedom workshops on falling for Civil Rights marches to the important matter of bodies in the street for "Black Lives Matter" demonstrations. We will focus on how the embodied nature of black political movements serves both as a way of fighting for political inclusion and as an alternative way of relating and living that renders the desirability of inclusion into the exclusive structures of American society altogether questionable.

**ENGL330401**  
**King Arthur in German Literature**  
**Resler, Michael**  
**Fall 2022**  
Conducted in English with all texts in English translation. Counts toward German major, German minor, and German Studies minor. A study centering on the most popular and enduring of all medieval legendary figures. We will examine the early texts from which the Arthurian mythology took root and contributed to the eventual spread into Germany of the tales of King Arthur and the Knights of the Round Table. We will then focus on a close reading of four or five of the most significant Arthurian romances within the German tradition. In addition, we will systematically trace the relationship between this highly idealized world of literary knighthood and real-life contemporary historical and social events of the twelfth and thirteenth centuries.

**Credits:** 3  
**Room and Schedule:** Lyons Hall 207 MWF 12:00 Noon-12:50PM

ENGL334201
Living Poets/Living Poetry
Adair, Allison C
Fall 2022

Did you know some doctors prescribe poetry to their patients? Can you guess which 2020 U.S. presidential candidate employed a poet as Director of Strategic Communications? In Living Poets/Living Poetry, we will energize and redefine our engagement with this active, urgent art form. We will learn how poets around the world rely on poetry to build community, to spotlight truth and record alternative histories, to run aesthetic experiments, to establish human connections, and to express joy. Built upon sustained, direct interactions with a selection of living poets from the US and abroad, this course will consider not only contemporary poetry's relationship to arts traditions but also its role in personal and cultural self-definition and its intersections with music, politics, justice, even healthcare. After studying each course poets work in sequence, along with work from stated and likely influences, we will prepare to host the poet for an in-class discussion. Each unit will culminate in a project relevant to the given poets work: popular and critical reviews, readers guides, creative translation exercises, and comparative studies between different poets and/or across genre (e.g., how various poets engage love or loss, how a certain theme is rendered in poetry vs. graphic memoir or sculpture). A panel with members of the Dark Noise collective and a shared open mic with poets from the Nakivale refugee settlement will introduce us to poetry as a means of not only personal reflection but also creative collaboration. No experience necessary. All are welcome.

ENGL334301
Environment and Race in Speculative Fiction
Woodward, Julia
Fall 2022
This course explores the intertwined concepts of race, environment, and futurity through readings of speculative fiction. We will ask: What is the relationship between race, the environment, climate change, and the future of our planet? and explore this question through the lenses of ecocriticism, postcolonialism, and critical race theory. Our fiction readings will encourage us to inquire: How do speculative writers reimagine human-nature relationships for the future? How do they reimagine understandings of race, and/or racialized systems and power dynamics? How do these authors re-world, and how can these re-worldings help to forge change in the real world? Readings may include works by NK Jemison, Octavia Butler, Cherie Dimaline, Colson Whitehead, Nnedi Okorafor, and other speculative writers of color. We will also explore HBOs critically acclaimed Watchmen series starring Regina King and Yahya Abdul-Mateen.

ENGL352701
General Linguistics
Owusu, Augustina
Fall 2022
An introduction to linguisticsthe scientific study of human languageand contemporary linguistic theory. Linguists use mathematical systems (often called formal systems) to develop precise theories that help us understand the rich cognitive processes that support our use of language to communicate, to conduct internal monologues, and much more. The course focuses on the major subfields within linguistics: phonetics, phonology, morphology, syntax, and semantics: how do linguists create and manipulate representations of language phenomena, and how do they analyze linguistic data? Our primary data will be from English, but we will also employ data from other languages. No previous exposure to the field is presupposed.

ENGL403701
Nineteenth-Century Crisis and Protest
Najarian, James
Fall 2022
Fullfills the pre-1900 requirement. Nineteenth-Century Crisis and Protest reads literature in the context of larger historical, social, and cultural movements in the nineteenth century. The course devotes itself to topics or situations as seen through sets of interlocking poems and essays. The readings start with some selections from the Romantic poets at the start of the century; we go on to trace Britain's political, military and Imperial ascent. They end at the very close of the nineteenth century, often seen as the apex of British economic and military power. The nineteenth century saw Britain's rapid transformation from an agricultural society into an industrial one, its gradual opening of education and property rights to women, its fitful democratization, its rapid secularization, and its increasing discussion of sexual and social matters. Writers tried to come to terms with the cultural effects of Britain's industrial and military might, and they saw these developments as both problems and boons. Throughout this course, I will stress that different kinds of texts -- poetry, fiction, journalism, polemic, travel writing, and even self-help -- can be read in literary ways: that is, closely. The writers we read include William and Dorothy Wordsworth, Alfred Tennyson, Mary Mitford, Harriet Martineau, Matthew Arnold, Elizabeth Gaskell, George Eliot, John Ruskin, Walter Pater, and Rudyard Kipling.

ENGL420101
Science Writing
Sutton, Sarah C
Fall 2022
From driverless cars to gene therapy to cryptocurrency, the latest scientific and technological breakthroughs promise to transform life as we know it. When science moves from the laboratory, to corporate boardrooms, to news headlines, and into our daily lives, writing is involved in every step along the way. In this course, we will read works created by and about scientists, and explore how science circulates through society via social media and blog posts, traditional media, and government policy making. We'll also examine how companies communicate with the public via press releases, the media, and advertisements. In written and oral assignments, students will practice the skills essential for success in writing about science--researching and reporting, interviewing scientists, pitching new ideas, understanding audience expectations, and clearly communicating essential knowledge. Students will have multiple opportunities to conceive, draft, revise, and complete writing projects tailored to diverse audiences. This course aims to help students understand and explore science writing as a career--including opportunities in media, research labs, university news offices, museums, science and technology focused companies, and many other venues.

**ENGL423801**

**Medieval Women's Voices**

**Stanton, Robert G**

**Fall 2022**
We're going to have a huge amount of fun working through this strange, wonderful, baffling, addictive, messed-up, and beautiful body of literature this semester. The readings span about 500 years and many languages (don't worry, the only ones not in modern English translation are some of the greats in Middle English, which I promise will be totally fun to mess around with!). Together, we will read selections from the large and wide-ranging body of medieval women's literature, including biography, autobiography, hagiography, romance, fable, love poetry, visionary literature, utopian literature, political theory, and personal letters. Much of the class will focus on mysticism, which not only accounts for a lot of female-authored texts, but often articulates relationships between female experience, female identity, and the divine. We will supplement the primary texts with feminist and gender theory, grapple with the problem of what constitutes "women's writing" and the possibility of female voices in male-authored texts. Along the way, we'll explore the historically evolving concept of gender as it relates to social formation, constructed racial and class identities, family roles, romantic relationships, and abiding ideas of the human and the divine.

ENGL430201  
Sex and the Novel  
Ohi, Kevin J  
Fall 2022
What is the place of sex in the novel? A matter, nearly always, for explicit and implicit censorship, sex disturbs the equanimity of fiction while lending motivation to plots and characters. Yet its interest extends far beyond character psychology. Sex allows novels to pose large questions about individuals as social beings, about interiority and its representation, about the degree to which other minds can be known. We will consider how novels in English have considered the practical, emotional, psychological, and ethical dimensions of sex, and, beyond that, sex's role in the genre, in shaping the capacities of the novel form.

ENGL447801  
Poe and the Gothic  
Lewis, Paul  
Fall 2022  
Fulfills the pre-1900 requirement. Working with Poe as a central figure, this course examines the development of English and American Gothic fiction from *The Castle of Otranto* to "The Yellow Wallpaper" and beyond. In addition to Poe, we will read work by some of the following writers: Horace Walpole, Matthew Lewis, Jane Austen, C. B. Brown, Washington Irving, Nathaniel Hawthorne, Charlotte Gilman, H.P. Lovecraft, and Stephen King.

ENGL452601
Shakespeare: Early Plays
Yargo, John
Fall 2022
This course fulfills the pre-1700 requirement for English majors and the historical foundations course requirement for English minors. Who is behind Shakespeare's plays? In this course, we will take an informed, scholarly approach to this perennial question. As we examine Shakespeare's early plays, we will consider the diverse forces that have shaped and continue to shape this body of work: the conventions of early modern drama that the plays draw on; the many theatrical agents, from actors to audiences to adaptors, who developed and redeveloped the plays; the influence of the cultural climate of early modern England; and the academic debates that guide not only how Shakespeare is taught, but which plays are attributed to him at all.

ENGL453601
Joyce's Ulysses
Nugent, Joseph G
Fall 2022
One single semester. One demanding class. One hugely important book. This course will lead you on an extended exploration of Joyce's *Ulysses*. Joyce is intermittently baffling; he's always fascinating; he's frequently hilarious. He's never less than challenging. No prior knowledge of Joyce's works is required, just a willingness to tackle the challenges offered by this wonderful, astonishing, intricate text. *The demand that I make of my reader,* he wrote, *is that he should devote his whole life to reading my works.* I think a semester will do. Mainly for the daring.

**ENGL457701**  
**Writing Workshop: Poetry**  
**Adair, Allison C**  
**Fall 2022**  
The course will provide an introduction to poetry writing as a discipline and craft by encouraging students to practice writing in a variety of modes. Students' own poems, from both open and directed writing assignments, will become the main text for this workshop, in addition to some models provided by the instructor for discussion of prosody and technique. The workshop critiques will focus on strategies for revising early drafts, and a chapbook of finished poems will be due from each student at the end of the semester. No application process.

Writing Workshop: Fiction
Matson, Suzanne M
Fall 2022
Enrollment limited to 15. This course provides encouragement, practice, and criticism for students seriously interested in writing short fiction. The workshop format demands self-motivation and universal participation. Since students' stories are texts for class discussion, a generous willingness to respond to others' writing and to expose one's own work to such reactions is an essential prerequisite. Individual conferences with the instructor supplement the workshop discussions. Students are expected to produce a steady stream of new and revised fiction throughout the semester. Narrative preferences from the traditional to the experimental are welcome.

Capstone: Into the Woods
Rudner, Bonnie
Fall 2022
All readers, young and old, share the wonder in fairy tales. This serves a deeper purpose: to experiment and learn our boundaries and responsibilities. There are dangers in woods, but Red Riding Hood learns a lot, frees herself, and embarks upon life. The symbolic journey into the woods allows seniors to leave the "woods of BC" with optimism and commitment. How will you negotiate transitions into society with the wisdom from your journey here?

ENGL500101
Seminar: Reading Like a Victorian
McAleavey, Maia M
Fall 2022
Fulfills the pre-1900 requirement. In this course, we will read "like Victorians" by reading Victorian novels and stories in their original formats: Charlotte Bronte's *Jane Eyre* (published in three volumes), Wilkie Collins's *The Woman in White* (published in thrilling weekly segments), Charles Dickens's *Our Mutual Friend* (published in monthly installments), and Conan Doyle's Sherlock Holmes stories (published in a magazine). We will analyze their accompanying illustrations, articles, and advertisements. Along the way, we will imagine the effects of reading by candlelight, in a pub, or aloud with children, and consider the impact publication format might have had on the form of these classic texts.

ENGL557501
Topics in Creative Non-Fiction (CNF): Writing About Place
Graver, Elizabeth
Fall 2022
Through the reading and writing of creative nonfiction essays, we will use place as a lens through which to explore the human relationship to natural and built environments, as well as to ideas of home, travel, exile, place and displacement in our complex contemporary world. Students will write three essays: Home/Insider Essay; Place/Displacement Essay; Reported Place Profile over the course of the semester and extensively revise and polish two of them. Readings may include work by Wendell Berry, Joan Didion, Ocean Vuong, Anne Dillard, Rachel Kushner, David Sedaris, Jonathan Lethem, Carlo Rotella, Robin Wall Kimmerer, and Jamaica Kincaid. Admission to this course is by permission of the instructor. Graduate/Undergraduate Level. Restricted to Graduate Students, Seniors, Juniors and Sophomores. Students should send up to 8 double-spaced pages of creative writing or place-based journalism to graver@bc.edu by 3/25/22. Your submission may be part of a larger piece; if so, indicate this on the manuscript. Include a paragraph explaining your interest in the course and a list of college level writing workshops you have taken, with instructors and grades. Ideally, the writing sample will be nonfiction, but if your strongest writing is in fiction, poetry or drama, that is also acceptable. Include your e-mail address. Late applications will be considered on a rolling basis as space permits.

ENGL603201
Seminar: Islam on the Shakespearean Stage
Yargo, John
Fall 2022

Muslim characters were a fixture of the early modern English stage. As England's growing involvement in global politics led to new partnerships and rivalries with Muslim-ruled states in the Middle East and North Africa, English drama became increasingly interested in representing the Islamic world. Dramatists wrote plays featuring Turks, Moors, and renegados (English converts to Islam), stock characters that spoke to the fantasies, fears, and social and political questions raised through the interactions between Englishmen and Muslims in the period. This course will provide you with a grounding in the representation of Islam on the early modern stage, teaching you to perceive how character, plot device, and genre create larger dialogues between plays. Additionally, this course will introduce you to how to use archival materials to approach early modern literature: we will read correspondence, diplomatic records, and travel narratives in order to contextualize the plays that we are reading in relation to depictions of Islam across a variety of non-dramatic genres. Finally, we will end this course by reading Sulayman al-Bassam's Richard III, An Arab Tragedy (2007), examining the lasting legacy of early modern dramas complicated and often troubled representations of Islam.

This course explores what an engagement with life writing by black Americans teaches us about the United States and its quest for democracy. We will situate contemporary writers within a larger literary tradition, beginning with James Baldwin's The Fire Next Time, a quintessential civil rights movement text, followed by Between the World & Me by Ta-Nehisi Coates, whom Nobel laureate Toni Morrison called the Baldwin of the Black Lives Matter era. We will also consider how various forms of memoir--as open letter (Imani Perry's Breathe and Kiese Laymon's Heavy), as interconnected essays (Emily Bernard's Black Is the Body), as literary criticism (Farah Jasmine Griffin's Read Until You Understand) meditate upon fundamental questions of citizenship, truth-telling, and fullest human blossoming.

ENGL603701
Seminar: The Harlem Renaissance
Curseen, Allison S
Fall 2022
This course explores the early-twentieth-century period of black artistic production alternately referred to as the Harlem Renaissance and the New Negro Renaissance. Challenging traditional views of Harlem as the epicenter of the period, we will read Harlem as a particularly prominent geographic site among many no less vibrant and no less significant sites across the country, the hemisphere and the Atlantic. Examining a wide range of artistic genres and mediums, we join these black artists, scholars, and leaders as they interrogate the relationships between art and politics; freedom and equality; culture and cultured; and blackness and personhood. In our examinations, we will be especially attentive to two contrasting lines of inquiries: 1) What historical, geographic, and socio-economic factors shape the contours of this Renaissance and its legacies? And 2) How might this Renaissance speak to our current questions about race, representation, and what, if anything, is American?

ENGL603801
Seminar: Cultural Rhetorics
Pauszek, Jessica M
Fall 2022
This course will explore the intersections of rhetoric, literacy, language, and identity. In particular, we will discuss how we historicize, define, theorize, enact, teach, and do Cultural Rhetorics, as well as think through how various communities have been in/excluded in histories of rhetoric. In doing so, we will consider how our positionalities (of gender, race, class, ethnicity, dis/ability, language, etc) shape how we make meaning in the world. As we think about the practice and study of Cultural Rhetoric, we must also think about how these understandings affect/challenge the research methods we use, the histories we tell, the theories we use, and the curriculum choices that we make.

ENGL604001
Seminar: The City in American Literature and Culture
Rotella, Carlo
Fall 2022
We will consider how American literature and culture has responded to the formal and conceptual challenges posed by cities. Taking an American Studies approach to our subject, our inquiry will include not only novels (e.g., Sister Carrie, Native Speaker) and other literary forms but also film (e.g., Chinatown, Blade Runner), music, landscape, and more. We'll also read scholars like Betsy Klimasmith, Thomas Heise, and Catherine Jurca, who offer interdisciplinary models for relating the interpretation of texts to the social, economic, and political facts of city life.
Note: Students may not receive credit for both this course and the undergraduate version, ENGL 2172 Imagining the City.

ENGL604101
Seminar: Game of Thrones: Medieval English Political Poetry
Weiskott, Eric B
Fall 2022
Before House Stark and House Lannister came the House of York and the House of Lancaster. The fourteenth and fifteenth centuries in England witnessed a series of social and political upheavals, from the Black Death and the Peasants Revolt to the Wars of the Roses. English poetry responds to and intervenes in these events. Political writing influenced the decisions of kings, shaped public perception of national politics, and landed people in prison (or worse). This course makes a survey of political poetry from England, 1300-1500, with focus on William Langland’s *Piers Plowman* and the poetry of John Gower. We read canonical authors such as Chaucer, Gower, and Langland alongside little-known texts from manuscript archives. Topics include multilingualism, the relationship between literature and politics, and the histories of poetic forms. No prior knowledge of Middle English required. Gower’s French and Latin poetry is read in translation. Note: Students may not receive credit for both this course and the graduate version, ENGL 7003 Game of Thrones.

English Language Training for Graduate Level Students: Focus on Speech and Presentation Skills
Anderson, Lynne C
Fall 2022
Designed for students whose first language is not English, this course will emphasize the oral/aural language skills required for success in graduate work. It will provide students the opportunity to hone their speaking and listening skills through group discussions, presentations, and targeted practice in pronunciation, stress, and intonation through the reading of poetry and tongue twisters. The course may be particularly beneficial to those with teaching responsibilities at BC. Non-credit and offered free of charge by GSAS to its students during the fall semester. Students who enroll in the course are expected to attend all classes throughout the semester. The course is restricted to students in the Morrissey Graduate School of Arts and Sciences. If space permits, students from other schools will be considered. Admission to the course is by application and permission of the instructor.

**ENGL774901**  
**Poetics**  
**Richardson, Alan**  
**Fall 2022**  
This course traces the development of poetics from the mid-twentieth century to recent attempts at revival. We'll read Aristotle's *Poetics* as a "pre-text," followed by key essays in Russian and Prague school poetics, responses by the Bakhtin group, and examples of the transition from Slavic to French structuralist poetics. We then review the poststructuralist critique of structuralist poetics before considering the return of poetics in cognitive poetics and the New Formalism. Although the readings could be described as "theory," most of them are concerned with questions of literary methodology, often illustrating their claims in relation to specific poetic texts.

ENGL775201
Live Contemporary Theorists
Restuccia, Frances
Fall 2022
Fulfills the Theory requirement. Being interdisciplinary, Contemporary Theory enhances sophistication in interpreting just about anything: literature, films, all art, in fact, but also your self, your relationships, the political world, the international world. Theory enables one to have a sense of what to look for in analyzing a text, rather than stumbling across whatever might strike your fancy. It is important to be conscious of what assumptions one is making about what is valuable when analyzing a text. Are you a feminist, psychoanalytic, deconstructionist, cultural, queer, post-colonial critic? Theory is pleasurably informative in drawing in the arts, history, theology, political thought, etc. You might be reading Kristeva, and suddenly you are engaging a painting of Saint John the Baptists head on a platter; or you might be reading Agamben but then finding yourself confronted with issues of biopolitics or the relation of people to their animality. Theory has a way of leading you to what is fascinating as you learn to read awry. Stimulating and animating, it can even serve as an anti-depressant. This course is an excellent stepping stone to graduate study or further graduate study. It is meant to expose students to several major figures of a second wave of contemporary theory-theorists who are alive and writing today. Through readings of whole books and some essays, it will provide an introduction and offer a substantial experience. We will focus on Badiou, Nancy, Ranciere, Agamben, Kristeva, iek, and possibly Sloterdijk, Butler, Copjec, Moten, Spillers, Bhabha, Zupani, and others.

ENGL776401
Twentieth-Century Irish Fiction
Smith, James M
Fall 2022
In this graduate seminar, we will read a selection of Irish novels so as to identify, discuss, and better understand complex cultural phenomena that become manifest in the aftermath of the colonial experience. The underlying premise suggests that Irish novelists participate in debates concerning national identity and, in the process, anticipate the evolution of a postnational society. Paying particular attention to issues of language, gender, place and literary authority, and to representations of religion, history, and identity, the seminar seeks to establish the inevitable heterogeneity related to the post-colonial condition.

Issues and Methods in English Studies
Weiskott, Eric B
Fall 2022
This course fulfills the M.A. Methods requirement. This course offers an introduction to the field of English studies, with focus on problems of method revolving around the field's burning question, What is literature? We read a range of recent scholarship, exploring approaches, methods, and issues of interest, including formalism vs. historicism, periodization, digital humanities, literary and cultural theory, and poetics. Primary works assigned are drawn from different centuries and all major genres, mainly from Britain. Students write either a research paper on a primary text or a position paper on an issue or a method.

In this class we will concern ourselves with the relationship between literature and the visual arts as it unfolded over (roughly) the last two centuries from the birth of photography in the early 1820s to the present. Rather than attempt to cover every manifestation of this unfolding—an impossible task—we'll limit ourselves to an in-depth study of three particularly dense moments: 1) the middle of the nineteenth century, the period during which photography was popularized, the detective story was invented, and (at least in France) modernism came into its own; 2) the early decades of the twentieth-century, the period of high modernism, with the latter's paradoxical coupling of a desire to make it new and a fascination with primitive art forms; 3) the post-war twentieth century, and the transition from modernism to postmodernism in the visual arts. We will examine works of literature, philosophy, and visual art. Proper names will likely include Poe, Baudelaire, Manet, Marinetti, Loy, Lewis, Benjamin, and Warhol.

English Courses: Spring 2023

ENGL101001
First Year Writing Seminar
Adair, Allison C
Spring 2023
Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

ENGL107901
Literature Core for English Language Learners
Zimmerman, Brian T
Spring 2023
Designed as a seminar for English Language Learners, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core strives to develop the student's capacity to read and write with clarity and engagement and to provide an introduction to literary genres. Linguistic support for students from diverse language backgrounds is provided throughout the semester. Department Permission Required--from the English Department.

**ENGL107906**  
**Literature Core for English Language Learners**  
Lee, Pyunghwa  
**Spring 2023**  
Designed as a seminar for English Language Learners, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core strives to develop the student's capacity to read and write with clarity and engagement and to provide an introduction to literary genres. Linguistic support for students from diverse language backgrounds is provided throughout the semester. Department Permission Required--from the English Department.

ENGL108032
Literature Core
Stanton, Robert G
Spring 2023
In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: www.bc.edu/literaturecore

ENGL109401
An Introduction to Modern Irish II
Cahill, Sean R
Spring 2023
Following on from ENGL1093, this course offers a continuing introduction to the Irish language for American students. This semester we will learn the past, future and imperative tenses. We'll examine the history of English and British policy toward the language, up to the controversy over the Irish Language Act today. We will continue to learn songs, and examine simple poetry and drama in Irish. Through this exploration you will enlarge your understanding of the cultural heritage out of which the language emerged, and which is accessible through Irish Gaeilc. Completion of this and Continuing Modern Irish I and II will fulfill the Morrissey College of Arts and Sciences language proficiency requirement.

**Credits:** 3

**ENGL109501**  
**Love, Sex, and Gender: The Western Literary Tradition**  
**Mormando, Franco A**  
**Spring 2023**  
Conducted entirely in English and Fulfills Literature Core  
This course explores the modern conception of "romantic love" by examining its birth and development in prominent literary works (by men and women) of the Middle Ages and Renaissance. We will also investigate allied notions of sexuality, gender, and marriage, in both a heterosexual and same-sex ("homosexual") context. For contrast and comparison, the course begins with a study of the Bible and ancient Greek and Roman texts and ends with a look at the depiction of our themes in contemporary cinema as well as a discussion of the current debate in American society over the nature and purpose of marriage.

**Credits:** 3  
**Room and Schedule:** Devlin Hall 221 TuTh 01:30PM-02:45PM

ENGL111001
First Year Writing Seminar: From Slavery to Mass Incarceration
DeRosa, Marla C
Spring 2023
Formerly Titled: First Year Writing Seminar: Power, Race and Inequality in the Criminal Justice System. This section of the First-Year Writing Seminar is centered around a book called Just Mercy by Bryan Stevenson. The book focuses on Stevenson's work with the criminal justice system and the organization he founded called the Equal Justice Initiative. The book raises questions about power, race, equality, justice, and the common good within the U.S. legal system for which there are no easy answers. Students will identify one of these issues/questions from the book and delve more deeply into that question. Students will start with an oral history/interview of a person who can shed light on their question from a personal or professional perspective. They will then review the academic research literature on the question and research what the media says about the issue. Finally, students will write and present (to a non-academic audience) an informed argument of their own about how to address issues of power and inequality.

ENGL118401
Lit Core: Literature, Testimony, Justice
Harrison-Kahan, Lori
Spring 2023
This section of Literature Core will explore how literary texts bear witness to historical events and address social issues. Through the study of poetry, fiction, drama, and autobiography, we will examine how writers have used a variety of literary genres and forms to transform traumatic memories and the experiences of displacement and oppression into art. Topics include slavery and the Holocaust. Texts may include Herman Melville's Benito Cereno, Narrative of the Life of Frederick Douglass, Toni Morrison's Beloved, Art Spiegelman's Maus, Tommy Orange's There There, and The Laramie Project.

ENGL212301
Language and Ethnicity
Thomas, Margaret
Spring 2023
An examination of how we use language to regulate power relations among social groups and of how individuals define personal identity through speech. Case studies include: the linguistic representation of social class membership, dialect geography, Native Americans and U.S. language policy, the Ebonics controversy, and arguments for and against maintaining public language standards. Emphasis on the status of language and ethnicity in the United States, viewed in cross-cultural perspective.

Introduction to Feminisms
Barko, Emily B
Spring 2023
Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

ENGL213301
Studies in Narrative
Lehman, Robert S
Spring 2023
This course introduces students to questions that they might bring to the study of narrative works--primarily novels, tales, and non-fictional narratives, though it may also include drama, film, and narrative poems. It aims to introduce the various critical frames through which we construct interpretations. As part of the process of reading, students will be introduced to common critical terms; narrative genres, conventions, and discourses; the construction of the character and the ways of representing consciousness; and the ordering of narrative time. The course will also expose the student to the implications of taking critical positions.

**ENGL214201  
American Literary History II  
Puente, Lorenzo A  
Spring 2023**

Fulfills pre-1900 requirement.. The decades following the Civil War were a time of fundamental change in U.S. society: the demise of the slave system and the rise of segregation; the emergence of industrialism, corporate culture, imperial adventurism, and successive waves of immigration; new roles for women; new patterns in cities and in regional byways; and new ideas imagined for reordering and reinventing democratic society all transformed the contours of daily life. This course examines how a diverse range of U.S. writers sought to capture and address these developments with new literary forms and practices, including the realist and naturalist novels to utopian literature and various forms of social commentary. Stretching, roughly, from 1865 to 1914, course readings will likely include works by Herman Melville, Mark Twain, W. E. B. Du Bois, Booker T. Washington, Rebecca Harding Davis, William Dean Howells, Charlotte Perkins Gilman, and Henry James.

**Credits:** 3  
**Room and Schedule:** Stokes Hall 301N MWF 10:00AM-10:50AM  
**Satisfies Core Requirement:** None
ENGL214301
American Literary History III
Tanner, Laura E
Spring 2023
This course provides an introductory overview of literature written in the United States from World War I to the early twenty-first century. We will look at the ways writers of this period have experimented idiosyncratically and in dialogue with one another as modernism turned postmodern, as canons collided and collapsed, as movies and music albums, as well as graphic literature displaced some of literature's more traditional forms. The course is largely conversational but structurally supported with student oral presentations. Required texts may include fiction by William Faulkner, Willa Cather, Toni Morrison, Maxine Hong Kingston, Sherman Alexie, and Junot Diaz, plus graphic literature by Art Spiegelman and Thi Bui. Requirements for the course include an oral presentation, two critical essays, two section exams, and a final exam.

ENGL217001
Introduction to British Literature and Culture I
Yargo, John
Spring 2023
Fulfills the pre-1700 requirement. Britain, Ireland, and their archipelago were home to an exceptionally vibrant early literary tradition spanning English, French, Irish, Latin, Norse, and other languages. Writing from these islands connected rulers and rebels, merchants and monks, brewers and bureaucrats. This course is a survey of British literature (well question the term) from the beginnings to 1700. Most texts are in English; some are read in translation. The course focuses on connections between literature, power, and the formation of literary canons. The survey covers all major genres of early literature from the archipelago. Texts and authors include Beowulf, Marie de France, Chaucer, Margery Kempe, Spenser, Shakespeare, Milton, and Behn.

ENGL217101
Introduction to British Literature and Culture II
McAleavey, Maia M
Spring 2023
Fulfills the pre-1900 requirement. This lecture course explores great British writers from 1700 to the present. This period includes (among much else) the great essayists and satirists of the eighteenth century, the Romantic poets and Victorian novelists of the nineteenth, the modernists of the twentieth, and the world writing that follows the break-up of the British empire. We consider these works in light of the cultural context in which they were written.

ENGL220001
The Underground Press
Ards, Angela
Spring 2023
Note to Journalism minors: this course satisfies the requirement for an elective with a "critical" orientation. Note to all students: This course is included in CORE - Engaging Differences and Justice. The underground press was a vast network of loosely affiliated newspapers that emerged in the 1950s and 60s when young people asked very hard questions about the meaning of power and the role of the press. The outsider outlets spread through hundreds of communities throughout the nation, ranging from big city weeklies like "The Village Voice" and the Berkeley "Barb" to specialized periodicals representing the Black press, as well as other ethnic newspapers, progressive weeklies, and various conservative perspectives. This course examines the factors that helped pave the way for this journalism of dissent and how this history affects alternative media today.

ENGL220201
Beast Literature
Polt, Christopher B
Spring 2023
From Mother Gooses fairy tales to lolcats, we imagine animals often speaking as we do. But what are we saying when we use animals to talk with and about one another? And what does literature featuring articulate animals say about our attitudes towards humans, animals, and the lines we draw between them? This course explores beast literature in its various forms (fable, comedy, the novel, epic, debate poetry, etc), examining its incarnations through ancient Greece and Rome, Medieval Europe, and the modern world.

**ENGL220301**  
**Introducing Ireland through Stage and Screen**  
**Nugent, Joseph G**  
**Spring 2023**  
This course will examine and analyze representations of Ireland in the theatre and on the screen up to the present. Tracing depictions of the rural and the urban through the lenses of film makers and dramatists, we'll consider how Irishness was made known to the world through the eyes of the homebound and the diaspora. Cinema subjects will range from the early-twentieth-century silent movies through the works of John Ford to Lenny Abrahamson; theatre will begin with the stereotypes of the nineteenth-century through the renaissance led by the Abbey, to the urgent works of todays young playwrights.

ENGL220501
Dangerous Women in Classical Literature
Eisenfeld, Hanne E
Spring 2023
Demeter sticks a baby in the fire, Amazons cut off one breast and live far away from men, Clytemnestra kills her husband in his bath. In this course we will investigate how Greeks and Romans used stories about female figures - goddesses, monsters, and humans - as a way of talking about a range of conflicts, tensions, and fears. While we focus on the ancient world, we will also look at how these figures are used in later periods and think about which stories we tell about women - and why.

ENGL222201
Introduction to Creative Writing for Multilingual Students
Anderson, Lynne C
Spring 2023
Are you a speaker of another language (or languages) in addition to English? Have you always wanted to write creatively but never had the time? In this beginning-level creative writing workshop, participants will embark on their own personal, artistic journeys and gain confidence as writers of English. You will consider the languages, family rituals, and stories that have shaped you by writing deeply personal essays and spoken-word poems that explore your identity as a writer and storyteller. You will write weekly, both in and out of class, and learn to listen carefully to your peers and the stories they have to share. We will discuss your classmates drafts throughout the semester and you will learn to provide thoughtful feedback to help one another build confidence and find joy in writing. In addition to reading the work of students in our workshop, we will read texts by multicultural storytellers including Sandra Cisneros, Jhumpa Lahiri, and Chang Rae Lee and explore the way language and cultural rituals shape identity. We will encourage one another to write boldly and freely and be creative with form, looking to spoken word poets, such as G Yamazawa who writes from the lens of the cultural outsider, for inspiration. We will experiment with language mixing, code-switching, play with sentence structure, and learn to abandon the rules of English grammar in early drafts in order to free ourselves to explore our personal stories more deeply. All levels of writers are encouraged to register.

ENGL227801
American Culture: Engaging Difference and Justice
Harrison-Kahan, Lori
Spring 2023
This course offers an introduction to the interdisciplinary study of American culture with an emphasis on questions of difference, justice, and power. We will concentrate on approaches, methods, and themes of interest as we assemble critical skills for making interpretive arguments about aspects of culture in their historical moment. While assembling a toolkit of interpretive moves we can make on American culture and working to build stronger analyses, we will also consider how American society and culture have been defined by differences of race, class, gender, sexuality, dis/ability, religion, and other socio-cultural categories. We will consider how American Studies scholars have combined theory and praxis in order to expose injustice in the nations past and present; form communities based on principles of inclusion and solidarity; and create just conditions for citizenship and humanity. The materials we analyze will include examples from film, television, music, literature, theater, comics, photography, advertising, among others. Each unit will be organized around a question that generates further questions, analysis, and discussion. The questions include, for instance, Why is Indigenous Studies central to American Studies?, What does visual culture tell us about race in modern America?, and How do we see race and religion after 9/11? During the semester, we will also attend a number of events sponsored by American Studies, AADS, and other interdisciplinary departments, centers, and programs that represent a variety of interests, subjects, and approaches. This course satisfies the university Cultural Diversity requirement. For English majors this course also satisfies the Literature Across Worlds requirement. Note for American Studies Minors: Students can take either ENGL2278 or or ENGL 2277: Introduction to American Studies to satisfy the introductory course requirement. (Students cannot receive credit for both courses.)

ENGL234801
Modern Middle Eastern and Arabic Literature (in translation)
Salameh, Franck
Spring 2023
All works are read in English translation. The complex, multicultural nature of the Middle East is surveyed through the twentieth-century literature of Arabic-speaking lands, Israel, and Turkey. Identity, culture, religion, nationalism, conflict, and minority narratives. Arabic works: the writings of Adonis, Darwish, and Qabbani. Hebrew works: the writings of Amichai and Bialik. Works written in French, English, Kurdish, Syriac, Turkish, and various Middle Eastern dialects: the writings of Andree Chedid, Mario Levi, Charles Corm, Louis Awad, Said Akl, and Orhan Pamuk.

ENGL247001
Black and Popular: Speculative Fictions by Black Writers
Frederick, Rhonda
Spring 2023
This course asks: what do discussions of contemporary social issues look like when depicted in popular literatures written by writers of African descent? What is the benefit of fictionalizing these issues in genre literatures? Students address these questions by examining the forms of "speculative fictions" (specifically thriller, science fiction/fantasy, and mystery/detective) as well as urban romance to determine how each represents concerns of twentieth/twenty-first century black peoples in the U.S., Canada, Jamaica, and Martinique. Our focus on these genres' explorations of race, class, culture, incest, social engineering, and intimate relationships is complemented by socio-historical studies of these issues and countries.

ENGL320201
Disability Studies
Dunsford, Clare M
Spring 2023
Disability and ability are socially constructed categories that provoke questions about how we as a society deal with difference. This course explores representations of disability in fiction, poetry, memoir, and essays. Questions of representation—who gets to tell the story, how disability has been represented historically at different times and in different cultures—will be considered with reference to the work of theorists like Rosemarie Garland Thomson and Tobin Siebers. Readings may include Sophocles' Philoctetes, Wordsworth's "The Idiot Boy," The Curious Incident of the Dog in the Night-time, and Michael Berube's Life as We Know It: A Father, A Family, and an Exceptional Child, among others.

ENGL334401
American Archives: Memorials, Monuments, and Memory
Portillo, Vincent
Spring 2023
This course fulfills the Race, Blackness, and Language requirement. Recent discussion concerning racism and the removal of Confederate monuments across the United States has led to tension along national, cultural and ethnic lines, reminding us of the difference between the remembrance of history and the reverence of it. This interdisciplinary course will read the city of Boston and its public monuments and memorials as an archive of American history, investigating the impact of the interaction of class, gender and race on the historical formation of city life, with an emphasis on the remembrance of the history of slavery and its abolition. Readings from across disciplines, including American studies, historiography, museum and archival studies, human geography, rhetoric, etc. will help us think critically about how the dimensions of power operate in the production and preservation of history. Readings will also help us think critically about whose histories are valued, preserved and promoted according to ideologies of race, nationality, and social class, and how un-memorialized histories may be lost. In addition to guest speakers who will visit our class via zoom, we might visit local monuments and memorials in and around Boston, including the Black Heritage Trail in Bostons Beacon Hill neighborhood, the Harriet Tubman Memorial, as well as sights along the Boston Hub of the Underground Railroad.

**ENGL334501**  
The Apocalypse in Literature and Culture  
Crockett-Girard, Lauren A  
Spring 2023
How do we conceptualize the end of the world? More importantly, why do we spend so much time conceptualizing the end of the world? This course is interested in exploring these questions and more. We'll look at different conceptions of "the end" through fiction, non-fiction, film, art, and other mediums. While we'll begin with religious conceptions of the apocalypse (like Armageddon), this course will also consider many other kinds of ends, such as nuclear and environmental. Some authors may include Richard Matheson, Ray Bradbury, Octavia Butler, Harry Harrison, and others. Some films may include Godzilla, World War Z, Left Behind, and The Dead Don't Die.

**ENGL334801**  
**Science and Storytelling**  
**Gerrish, Grace**  
**Spring 2023**  
Though we often think of the arts and sciences as two fields that are "opposite" or at odds with each other, we stand to learn much from paying attention to their similarities. In this course, students will practice close reading and identifying patterns in narrative media using steps from the scientific method: making observations, forming hypotheses, collecting evidence, etc. In turn, we will also see how the sciences are often fluid and up to interpretation. Our texts, themselves a synthesis of science and art, will include science fiction staples from Mary Shelley (Frankenstein) and H.G. Wells (The Sleeper Awakes), as well as contemporary writings such as Tommy Picos Nature Poem, and visual media such as Black Panther and Star Trek: The Next Generation.

ENGL335101
British Romantic Poetry
Richardson, Alan
Spring 2023
Fulfills the pre-1900 requirement. In this course we will read and discuss the poetry of Burns, Blake, Barbauld, Wordsworth, Coleridge, Byron, Shelley, Hemans, Keats, Clare, and Landon. In addition to reading a few essays in literary criticism and theory by the poets themselves, we will consider a variety of critical perspectives, including formalism (the study of poetic and other literary devices and structures) and other approaches, such as feminism and the New Historicism, that bring out the cultural, social, and historical contexts of the poems.

**ENGL420101**  
**Science Writing**  
**Sutton, Sarah C**  
**Spring 2023**  
From driverless cars to gene therapy to cryptocurrency, the latest scientific and technological breakthroughs promise to transform life as we know it. When science moves from the laboratory, to corporate boardrooms, to news headlines, and into our daily lives, writing is involved in every step along the way. In this course, we will read works created by and about scientists, and explore how science circulates through society via social media and blog posts, traditional media, and government policy making. We'll also examine how companies communicate with the public via press releases, the media, and advertisements. In written and oral assignments, students will practice the skills essential for success in writing about science—researching and reporting, interviewing scientists, pitching new ideas, understanding audience expectations, and clearly communicating essential knowledge. Students will have multiple opportunities to conceive, draft, revise, and complete writing projects tailored to diverse audiences. This course aims to help students understand and explore science writing as a career—including opportunities in media, research labs, university news offices, museums, science and technology focused companies, and many other venues.

ENGL430301
Philosophy and Literature
Lehman, Robert S
Spring 2023
This course introduces students to major problems at the crossroads of philosophy and literature. It addresses key questions about the value of literature, literatures ability to address philosophical puzzles, and the surprising uses of literary style in philosophical texts. Readings span literature, film, and philosophical theories of art. Authors may include Sophocles, Plato, Shakespeare, Keats, Dickinson, Nietzsche, Kafka, and Coetzee. This class should be of interest to students of literature, students of philosophy, and anyone who wants to develop a more thoughtful relationship to literary and philosophical texts.

ENGL430401
Writing Empire: Unsettling British Literature and Culture
Dept, Dept
Spring 2023
We live today in a globalized world that was, in many respects, made by Britain. At its height in the early part of the 20th century, the British held the largest empire in history. The question that is frequently raised is, how did a small island nation come to rule over a quarter of the world's territory and population? The answer is not obvious, and depends largely on who is telling the story. In this course, we shall entertain multiple perspectives on the British Empire by juxtaposing novels, poetry, and non-fiction written by people from different social classes in England, Ireland, India, and Africa. We shall pay particular attention to the importance of social rank and status in England, and the emphasis on grand spectacles of power in the colonies. By tracking these ideas of prestige and distinction, we shall also examine how they served to distribute power and wealth unevenly across England and the Empire. Readings will include classic works of British literature, as well as exceptional writing from the colonies pertaining to imperial rule.

**Topics in Creative Nonfiction: Writing Mental Health**
Roberts, Susan A
Spring 2023
Topics in CNF: Writing Mental Health: "Much madness is divinest sense/to a discerning eye" so begins one of Emily Dickinson's most famous poems. How do writers treat mental health as a subject? What are the issues and questions that arise when contemplating such a large and complex area? In this workshop students will write their own essays in a variety of non-fiction styles (reportage, opinion, profile, narrative, memoir) to address issues of mental health such as mental illness, addiction, neurology and neuropsychology, behavior, and medical history. We'll read short works from a wide selection of writers across disciplines that may include: TaNehisi Coates, Oliver Sacks, Elizabeth Wurtzel, William Styron, Mary Karr, Sigmund Freud, Carl Jung, Alice Miller, Leslie Jamison, and poems of Theodore Roethke, Sylvia Plath and Ted Hughes, documentary, and photographic work of Dior Vargas.

ENGL448701

American Modernisms: Shaky Grounds

Tanner, Laura E

Spring 2023
This course will explore the narrative and poetic strategies that American writers between the first and second world wars employ to represent issues including family, space, objects, trauma, war, commodity culture, gender, race and class. A series of student presentations will set the stage for the literary works we will study by providing a sense of the cultural conflicts, historical events and artistic breakthroughs of the early twentieth century. As we explore the role of literature in picking up the pieces of American life after the First World War, we will focus on the way in which modern poets and novelists come to view the relationship between language and lived experience. How, we will ask, do modern American writers perceive and manipulate the words and forms that are the most basic tools of their trade? How do they conceive of art function in a world defined by fragmentation and incoherence? How do they negotiate between testifying to the loss of American innocence and rebuilding meaning in a diminished world? How do the dynamics of African-American modernism complicate our responses to these questions? We will read fiction by Nella Larsen, William Faulkner, F. Scott Fitzgerald, Ernest Hemingway, Zora Neale Hurston, and Nathanael West, as well as poetry by William Carlos Williams, T. S. Eliot, Wallace Stevens, Louise Bogan, Robert Frost and Langston Hughes. No knowledge of modernism will be assumed, but students who have read a few of these writers and who wish to delve more deeply into the dynamics of the texts and the period are especially welcome.

How to Begin Thinking: Aftermaths of Twentieth-Century Literature, Philosophy, History
Newmark, Kevin
Spring 2023
Conducted in English: Undergraduate Elective. Cross listed with English and Philosophy. "Thinking," the French philosopher Emmanuel Levinas once suggested, "probably begins through traumatisms." This course will study a series of disruptive and transformative events that have indelibly marked the twentieth century. What is the task of thinking for a European tradition displaced internally by the Holocaust and externally by the end of colonial expansions into other continents? Authors will include Levinas, Derrida, Nancy, Saussure, Barthes, Duras (in English translation from French); Borges and Dorfman (in English and English translation from Spanish); Calvino (in English translation from Italian); and Descartes (in English translation from Latin). A German component (in English translation) will consider Husserl and Heidegger as a counterpoint to the European tradition of Romance languages, literatures, and cultures.

**Reading Irish Childhood**

**Smith, James M**

**Spring 2023**
Why study Irish childhood now? Representations of the child dominate recent Irish culture, from Oscar winning movies, to Pulitzer winning memoirs, and Booker winning novels. The course evaluates this important cultural turn while examining how understandings of the Irish child change over time. We will investigate the relationship between child and nation and ask how nostalgia and memory frame childhood. This course also considers siblings, education, play, adoption, abuse, and institutionalization. Texts include short stories by James Joyce and Kevin Barry, novels by Roddy Doyle, Anne Enright, and Emma Donoghue, memoirs by Frank McCourt and Caitríona Palmer, poetry by Connie Roberts, and films and documentaries including The Butcher Boy, Philomena, and States of Fear. Students will participate in the visit to BC by Anne Enright, Kevin Barry, Caitríona Palmer, and Connie Roberts.

ENGL452901
Shakespeare: Later Plays
Sofer, Andrew
Spring 2023
A lecture/discussion course placing Shakespeare's later drama, the period of his mature tragedies and magical romances, in the historical and theatrical contexts of his time. Topics will include Shakespeare's professional career as a "King's Man" (servant to James I); the playhouses and court for which he wrote; the structure of playing companies; stage conventions; and the textual and performance histories of his plays. Plays may include Othello, King Lear, Macbeth, Measure For Measure, The Winters Tale and The Tempest. This course fulfills the pre-1700 requirement.

ENGL453801
Visual Culture in Black America: The Art and Politics of Seeing and Being Seen
Jones, Jovonna
Spring 2023
This course fulfills the Race, Blackness, and Language requirement for English majors. In this course, we will examine the significance of visual culture for Black America, thinking critically about the art and politics of seeing and being seen. We will keep in mind the following questions: what does it mean to see blackness? How do images function as tools of empowerment and disempowerment, or representation and misrepresentation? What role does visual media play in Black life and imagination? Photography will be central to the study of visibility, but we will also consider what role other media play in the production of blackness as a visual phenomenon: literature, performance, and music videos. Authors and artists may include Frederick Douglass, Sojourner Truth, Ida B. Wells, W.E.B. Du Bois, Josephine Baker, Gordon Parks, Spike Lee, Hype Williams, Melina Matsoukas, Claudia Rankine, and LaToya Ruby Frazier. Assignments will include weekly discussion posts on readings and images featured in the course, and one creative project that may take the form of a photo-essay, critical paper, or video related to Black visual culture.

Contemporary Literary and Cultural Theory
Restuccia, Frances  
Spring 2023  
This course will introduce students to some major texts of contemporary theory. We will spend several weeks on psychoanalytic theory (Freud, Lacan, Kristeva). We will also read five or so essays from The Norton Anthology of Theory and Criticism to sample deconstruction, post-colonial theory, feminism, and other post-structuralist approaches. Theorists such as Benjamin, Foucault, and Agamben will be examined for political theory. This course is meant to enable students to participate in current national and international debates that, especially due to their political vitality, manage to touch on all literary fields.

ENGL457701  
Writing Workshop: Poetry  
Garcia, Kimberly  
Spring 2023  
The course will provide an introduction to poetry writing as a discipline and craft by encouraging students to practice writing in a variety of modes. Students' own poems, from both open and directed writing assignments, will become the main text for this workshop, in addition to some models provided by the instructor for discussion of prosody and technique. The workshop critiques will focus on strategies for revising early drafts, and a chapbook of finished poems will be due from each student at the end of the semester. No application process.

ENGL457901
Writing Workshop: Fiction
Boucher, Christopher G
Spring 2023
Enrollment limited to 15.. This course provides encouragement, practice, and criticism for students seriously interested in writing short fiction. The workshop format demands self-motivation and universal participation. Since students' stories are texts for class discussion, a generous willingness to respond to others' writing and to expose one's own work to such reactions is an essential prerequisite. Individual conferences with the instructor supplement the workshop discussions. Students are expected to produce a steady stream of new and revised fiction throughout the semester. Narrative preferences from the traditional to the experimental are welcome.

ENGL491501
Advanced Fiction Writing Workshop
Boucher, Christopher G
Spring 2023

Admission to this course is by permission of the instructor. Graduate/Undergraduate Level. Restricted to Graduate Students, Seniors, Juniors and Sophomores. The Advanced Fiction Workshop provides encouragement, practice, and criticism for students who have demonstrated accomplishment in writing fiction. The workshop format demands self-motivation and universal participation. Since students' stories are texts for class discussion, a generous willingness to respond to others' writing and to expose one's own work to such reactions is an essential prerequisite. Individual conferences with the instructor supplement workshop discussions. Students are expected to produce a steady stream of new and revised fiction throughout the semester. Narrative preferences from the traditional to the experimental are welcome. Admission is by writing sample. Please email the instructor for application details.

ENGL491701
Advanced Poetry Workshop
Adair, Allison C
Spring 2023
Admission to this course is by permission of the instructor. Graduate/Undergraduate Level. Restricted to Graduate Students, Seniors, Juniors and Sophomores. This is a workshop for those who already have some experience writing poetry, and who wish to work intensively on matters of craft and revision. Students will produce roughly two poems a week, responding to each others drafts in workshop discussion. Though the bulk of class discussion will be about student writing, some class time will be devoted to a discussion of useful models and what they can teach us about strategy and craft. Short in-class exercises will be given weekly as prompts to begin the writing process. In ongoing consultation with the instructor about which poets might interest them most, students will devise their own reading list of contemporary poets and keep a response journal. In at least two half-hour conferences over the semester, each student will be given individual feedback on revisions. The final project will be a chapbook of at least 12 revised poems produced over the semester, culled from around 25 drafts produced in and out of class. Admission is by writing sample. Please email the instructor for application instructions.

**Seminar: Literary Boston 1790-1860**

Lewis, Paul

Spring 2023
Fulfills the pre-1900 & seminar requirements Walk the streets of Old Boston in this course that explores familiar and forgotten chapters of literary history. Spend a night at the Federal Street Theatre during the 1790s. Search early Boston magazines for forgotten treasures. Meet the poet buried on Boston Common. Find out why Edgar Allan Poe called members of the Boston literati "Frog-Pondians." And watch the American Renaissance flower. Authors studied will include Judith Sargent Murray, Lydia Maria Child, Charles Sprague, Henry Wadsworth Longfellow, Nathaniel Hawthorne, and Poe—Bostonians all! Visits to literary sites and explorations of online archival materials will help transport us back in time. Note: Students may not receive credit for this course and ENGL4404: Literary Boston 1790-1860

**ENGL551301**

**American Studies Senior Seminar: Transnational American Studies**

**Harrison-Kahan, Lori**

**Spring 2023**

This seminar offers a deep dive into the transnational wing of American Studies. Instead of taking Americas borders as the limit of inquiry, we will explore the cultural history of Americas relationship with the world beyond its borders specifically Asia from the 18th century to the present. Our focus will be on the relationship between the material conditions of American and Asian life (political, military, economic, social) and the production of diverse forms of culture (household goods, dance, movies, performance, propaganda, etc.). The seminar culminates in a substantial research paper about a cultural artifact of your choosing.

ENGL551701
Capstone: Love and Indoctrination: A Foundation for the Rest of Your Life
Kaplan-Maxfield, Thomas
Spring 2023
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. In our world of political spin and fake news, the surveillance state and social media, the pressure to separate what's real and valuable from what's fake and mere propaganda (another way of saying lies) is paramount, and critical for figuring out how to live, practically, spiritually, intellectually and psychologically. In George Orwells 1984, the affair of Winston Smith and Julia threatens the entire structure of Big Brother. Why? What is it about love that threatens large systems based on indoctrination? In this course we will explore and develop working definitions of both love and indoctrination in order to differentiate them.

ENGL552201
Capstone: Creativity and Self
Roberts, Susan A
Spring 2023
Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Creativity is the act of bringing that which does not exist into existence, of bringing forward that which has previously never lived. It is the remarkable experience of bringing something out of nothing. In order to bring something new into the world, you must be willing to go into the unknown. Just as the poet might listen inwardly and stay open for the next word and just as the artist might pay attention to the images that arise from within, creativity asks that we have one foot in what is known, or existence, and one foot in what is not-known, or non-existence. This requires an ability to be still, to look both inward and outward, and then to record the result in art-making or in life. In this Capstone course, students will attend to two areas: the meaning of art and mindfulness, and their own history of making (or lack thereof) and how they would like to build artistic sensibility, creativity and creation into their lives. We will investigate the spiritual roots of creativity, and the ways in which creativity and appreciation of art and art-making can contribute meaningfully to the development of one as a full citizen of the world. You do not have to have any experience in art-making to take this course. Texts include: Creativity: Where the Divine and Human Meet, by Matthew Fox and Art and Fear: Observations on the Perils (and Rewards) of Artmaking, by David Bayles and Ted Orland.

ENGL604201  
Seminar: Black Women Writers and the Question of Form  
Frederick, Rhonda  
Spring 2023
The phrase "Black Women's Writing" suggests that such writing is a fixed, homogeneous body of work that can be neatly defined and represented. Our course complicates this idea. In other words, rather than experiencing writing by black women as an easily definable type of literature, we seek to represent it as diverse, complicated, and sometimes contradictory. By so reading, discussing, and writing about fiction by black women, we take an intersectional approach (overlapping issues of race, gender, class, sexualities, abilities) to interpretations of fictional black women, black communities, and black histories. Significantly, we will de-construct traditional notions of Black Women's Writing by examining the varied forms these writers use to express their imaginings. These considerations will expand our thinking about all types of literature, as well as the importance of literature/literary criticism in extra-literary contexts. Required readings cover a variety of genres: science fiction/fantasy, prose/experimental writing, drama, film, young adult literature, short story, and memoir. This range will allow us to explore the ways that form shapes meaning and content.

Fulfills the pre-1900 and Seminar requirements. Victorian Britain has a well-known reputation for propriety and restraint. But violence was an inescapable part of the experience of Victorian writers and their publics, casting a shadow on their celebrations of the progress of civilization and their championing of the peaceful virtues of hearth and home. This course will examine representations of war, murder, domestic and sexual violence, and political violence on the home front and around the globe in Victorian fiction, poetry, and nonfiction prose writing. We will compare how violence was represented in popular cultural forms and in texts that have come to be centerpieces of the British canon, exploring the subject through such intersecting lenses as psychology and identity; social transformation; gender and sexuality; class and race; and empire. Note: Students who have already taken ENGL3360 Victorian Violence, cannot receive credit for this version of the course.

ENGL604401
Seminar: Elizabethan and Jacobean Drama
Sofer, Andrew
Spring 2023
Why was theater so popular in early modern England, yet also considered dangerous? This course covers a variety of comedies and tragedies written in England during the late sixteenth and early seventeenth centuries, including works by Kyd, Marlowe, Shakespeare, Jonson, Middleton, and Webster. We will consider aspects of genre and staging, as well as the sexual, political and social implications of drama in the period. In addition, we will read critical essays that place these plays in historical context. Work will include a class presentation; informal web postings; a short paper; and a final long essay.

ENGL604501
Seminar: Animal Worlds in the Middle Ages
Stanton, Robert G
Spring 2023
This course explores troubled boundaries between human and non-human subjects and objects in the literature, culture, and art of the Middle Ages. While human beings defined the nature and role of animals, those terms, as well as the institutions that mediated them, constituted what being human meant. We will read philosophy, history, theology, saints lives, fables, lyrics, epics, sagas, romances, laws, visions, and mystical/devotional texts alongside works in the emerging field of critical animal studies to begin to answer key questions about economic roles, cultural constructions, and the formation of ethical structures in the service of sharing lives and worlds.

ENGL702801
Environmental Humanities
Song, Min
Spring 2023
There has been growing scholarly interest within the humanities in thinking in a sustained and systematic way about the environment. This interest emerges from an active engagement with the present, when ecological concerns increasingly demand urgent attention, and with movements within the humanities itself for new accounts about our ability to know the physical world. This course charts the development of this interest and considers how it intersects with concerns that have been long-standing preoccupations for the humanities. Race in particular will remain an important feature of our discussions. Readings will include scholarly writings alongside important nonfictional and fictional works. Meets the Theory Requirement. Note: Students may not receive credit for both this course and the undergraduate/graduate version, ENGL6004 Environmental Humanities

ENGL770101
English Language Training for Graduate Level Students: Focus on Writing
Anderson, Lynne C
Spring 2023
Designed for those whose first language is not English, this course offers students practice writing in a range of academic modes including reflection, summary, analysis, and critique. Early in the semester, students will explore the composition process from brainstorming to drafting to revision to editing. Grammar is taught in the context of student writing. Several classes will be devoted to e-mail, reference letter, and proposal writing. Non-credit, offered free of charge by GSAS to its students during the spring. Department permission required. Students who enroll in the course are expected to attend all classes and complete short writing assignments weekly. The course is restricted to students in the Morrissey Graduate School of Arts and Sciences. If space permits, students from other schools will be considered. Admission to the course is by application and permission of the instructor.

ENGL775301
Reading Jacques Derrida
Newmark, Kevin
Spring 2023
This course will examine some of the fundamental ways that the work of Jacques Derrida has contributed to altering the context in which the humanities can be understood and studied within the modern university. It will take examples from Derrida’s repeated interventions in such disciplines as literature, philosophy, theology, and history. By situating Derrida’s work at the margins where accepted demarcations between the disciplines begin to blur, the course will suggest new possibilities for conducting interdisciplinary work in the future.

Nabokov: Seminar
Shrayer, Maxim
Spring 2023
The translingual achievement of Vladimir Nabokov. A close examination of Nabokov’s Russian and American periods, with particular attention to connections among his aesthetics, ethics, and metaphysics and to questions of language and style, sexuality, authorship, identity, and exile. Readings include selected Russian and English novels and short stories, Nabokov’s autobiographical and discursive writings and poetry, as well as exemplary stories by Anton Chekhov and Ivan Bunin. Knowledge of Russian is not a prerequisite. All discussions, readings, and papers are in English. Undergraduates may enroll with instructor's permission.

ENGL800101
The Global Eighteenth Century
Mitsein, Rebekah K
Spring 2023
Eighteenth-century British literature has a reputation for being obsessively nationalistic, defining a British Self against all foreign Others, but the eighteenth century was also a time of contact and exchange among all corners of the globe. In this class, we will examine how British writers engaged questions of globalism and transnationalism during an era when the cultural understand of both "Britain" and "the world" were changing. The secondary material for this class will come from a variety of critical perspectives, including postcolonial and global theory, ecocriticism, geocriticism, and posthumanism/new materialism. We will discuss the different theoretical and political stakes these approaches bring to how we conceptualize the global.

ENGL827501
Capstone: Digital Humanities as Public Scholarship
Lehman, Brittany
Spring 2023
Many schools across the United States teach different versions of survey classes for which instructors have to reach outside their own focuses. To do so, those instructors often search for visualizations of historical change, literary development, and examinations of religious networks, depending on the field and course. In this capstone, graduate students will develop projects within their areas of specializations to produce digestible digital exhibits, visualizations, and more that can be made freely available to scholars across the world. The goal would be to promote the free exchange of high quality information and digital sources available in the public domain. Furthermore, through the capstone, students should understand the process of a project from conception to presentation. They should have developed skills engaging metadata, transcription, the process of digitization, and more. Students can bring their own research data from their dissertation project or from previous coursework, or they can be provided with a historical or literary dataset from the Boston College Libraries to utilize over the semester. There are four phases to the class, beginning with performing an environmental scan and writing a proposal for their project. In Phase II and III, students will implement and carry out their projects. Finally in Phase IV, students will engage in peer consulting and prepare their work for online publication.

ENGL882501
Composition Theory and the Teaching of Writing
Pauszek, Jessica M
Spring 2023
This course is designed to (1) prepare graduate students to teach introductory, college-level writing courses; (2) introduce students to central issues, problems, and theories in composition studies; and (3) encourage students to examine the interanimating relationship between critical theory, practical writing experience, and the teaching of Composition/Rhetoric. Though the emphasis is on central, nuts-and-bolts tasks in the teaching of writing (e.g., designing assignments; responding to student essays; selecting texts for discussion; etc.), this is not a prescriptive "how to" course; students are asked to consider pedagogical issues and choices in composition studies from a variety of personal and theoretical perspectives.

**ENGL888701**  
**Introduction to Advanced Research**  
**Najarian, James**  
**Spring 2023**  
This course will acquaint you with the resources to carry out the central tasks of literary scholarship. Bibliography (studying the production, dissemination, collection, location, and identification of literary artifacts and versions) forms the dynamic basis for scholarship and criticism of all kinds, just as critical sensibility guides our choice of what to look for. You will be guided through the reference works and databases in the Boston College library and elsewhere, discuss the goals, purposes, and future of the field of literary studies, explore the phenomenon of digital humanities, and produce an original project based on archival sources.

ENGL990901
PhD Seminar: The Concept of ?World Literature? in the Age of Globalization
Seshadri, Kalpana R
Spring 2023
What counts as World Literature? Who decides whether a given work of art has universal significance? Where is it decided? How is the canon of World Literature constructed and maintained? What is the relation of these universal works to the global economy and the marketplace of ideas? In this course, we will sample some of the key theorists of world literature such as David Damrosch, Pascale Casanova, Emily Apter, Pheng Cheah, and Debjani Ganguly to consider the role of economic globalization, nations and nationalisms, linguistic power, European imperialism, and race. We will also read authors from Asia, the Middle East, Africa, and the other Americas who challenge traditional ideas regarding world literature as a universal genre.

Environmental Sociology I
Thombs, Ryan P
Summer 2022
This is an upper-division seminar that provides an overview of theoretical and empirical work in environmental sociology. After a brief introduction to the origins of the field, the seminar will cover topics that are representative of what is current in the area, especially bodies of empirical research that are national, international, and global in scope, and with particular attention given to how large-scale social institutions and organizational forms impact the environment. We will focus on the social dimensions of environmental impacts, the anthropogenic drivers of environmental impacts, and sociological research on solutions to environmental crises. A key takeaway of the course is the necessity in taking a structural approach to the study of socioenvironmental relationships. Attention will also be given to how environmental sociology makes fundamental contributions to interdisciplinary research in environmental studies and sustainability science. The course is required for all Environmental Studies majors.

Cities are diverse and dynamic places characterized by social and environmental inequalities across space, with some areas subject to greater levels of poverty, economic disinvestment, and public health risks than others. This unevenness has led to greater calls for social and environmental justice. But how do these inequalities arise, and what makes a more just city? These paired courses investigate these questions from social, spatial, and environmental perspectives. We will discuss how city-building and suburbanization are mediated through natural resources and infrastructural systems as well as race, ethnicity, immigration, class, and other social attributes. Students will cultivate their own interdisciplinary frameworks of social and environmental justice as a step toward becoming more informed global citizens.

ENVS190101
ENVS Internship
Pisani Gareau, Tara
Fall 2022
Internship for ENVS majors only. This is a graded 1-credit course. The student will need to describe clear and concise work and objectives of that work as well as describe his/her preparation for that work. A deadline for completion and evaluation of is required as well as periodic meetings with the instructor.

ENVS244501
The Vegetative Soul: The Hidden Life of Plants
Vandewall, Holly R
Fall 2022
By weight, more than 80% percent of the living things on the earth are plants, and without them the earth's animals, including humans, would perish within weeks. But philosophy has spent a vanishingly small part of its efforts in considering this form of life, generally relegating plants to the status of minimally alive, but essentially uninteresting. As Michael Pollan notes, "plants are so unlike people that it's very difficult for us to appreciate fully their complexity and sophistication. Yet plants have been evolving much, much longer than we have, have been inventing new strategies for survival and perfecting their designs for so long that to say that one of us is the more 'advanced' really depends on how you define that term, and what 'advances' you value'." This class will consider how humans have historically regarded the plant kingdom, what we can learn from the challenging imaginary exercise of attempting to understand how they live, and how we might reconsider the world if we came to regard the plant kingdom not as passive subjects of human actions, but as powerful and vital actors in their own right.

ENVS250101
The State of Affordable Housing in the States
Van Meter, Robert H
Fall 2022
Course offered for Sophomores only. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

Conservation is often framed as a scientific enterprise, but today's global biodiversity conservation strategies are as much the result of politics as they are of science. In this class, we will examine how the range of conservation strategies found today - from community-based natural resource management to the Convention on Biological Diversity reflect negotiations between experts, politicians, and citizens as they grapple with the complex question of which species should exist where and to whose benefit. Particular attention will be given to North American conservation efforts and their global implications.

ENVS334501
Environment and Public Health
Kumar, Praveen
Fall 2022
This course is designed as a seminar to give students an introduction to the field of environmental public health. The course will explore current and fundamental literature of environmental health (EH) science. We will also discuss the disproportionate burden of EH problems on vulnerable communities in the U.S. and around the world. Major topics will include air and water pollution, global sanitation and waste, toxicology, pesticides, food security, and climate change. The course has a strong emphasis on environmental justice and on the global health impacts of our environmental footprints. Students will learn about the debates and issues foregrounding the need to view ecology and human society as a whole in order to understand and prepare for these changes. The course emphasizes evidence-based approaches for arriving at program strategies and policy recommendations to improve environment health response for the most vulnerable. A significant thrust of the course will be to enable students to think of policy and programmatic approaches to communities vulnerable to environmental and climate variability.

ENVS335501
Sustainable Cities
Burns, Jennifer L
Fall 2022
About 4.2 billion people around the world live in cities today, with this figure expected to double by 2050. Improvement of the urban environment is therefore crucial to a sustainable planetary future. In this course, students will examine current best practices for urban sustainability and resilience in areas such as restoration of watershed health, mitigation of air pollution and soil toxicity, management of solid waste, reduction of the urban heat island effect, improvement of mass transit and infrastructure, support of urban agriculture alongside a variety of other environmental justice efforts, and preparation for sea level rise, extreme weather events, and rising temperatures.

**Seminar in Environmental Law**  
**Fowley, Jeffry T**  
**Fall 2022**  
This is a seminar intended for undergraduates interested in environmental law and policy. It is a good supplement to ENVS2256 Environmental Law and Policy as it covers selected topics in depth. Topics covered include: (1) the Clean Water Act and the Boston Harbor cleanup; (2) the RCRA hazardous waste regulations; (3) contaminated (both superfund and brownfield) site cleanups; and (4) sustainability/toxic use reduction efforts by businesses. This course will emphasize the practical aspects of environmental law and policy including learning how to read and understand environmental regulations and permits, and will include several written exercises (in lieu of exams). This course is open to seniors and juniors. Sophomores may be admitted, but only with the permission of the instructor.

ENVS336001
Research Methods in Environmental Studies
Satcher, Lacee
Fall 2022
For Environmental Science majors and minors only. The course is designed to prepare majors and minors in Environmental Studies to pursue a senior thesis or seminar research project. The course helps students develop a research question from their interest and curiosity in an environmental topic. Students are introduced to qualitative, quantitative, and spatial methods that are used in environmental studies research. Students then design a study to answer their specific research question.

ENVS356201
Environmental Sociology I
Thombs, Ryan P
Fall 2022
This is an upper-division seminar that provides an overview of theoretical and empirical work in environmental sociology. After a brief introduction to the origins of the field, the seminar will cover topics that are representative of what is current in the area, especially bodies of empirical research that are national, international, and global in scope, and with particular attention given to how large-scale social institutions and organizational forms impact the environment. We will focus on the social dimensions of environmental impacts, the anthropogenic drivers of environmental impacts, and sociological research on solutions to environmental crises. A key takeaway of the course is the necessity in taking a structural approach to the study of socioenvironmental relationships. Attention will also be given to how environmental sociology makes fundamental contributions to interdisciplinary research in environmental studies and sustainability science. The course is required for all Environmental Studies majors.

In his famous article The Tragedy of the Commons Garrett Hardin proposed that people, left to their own devices, would exploit resources to the point of ruin, and argued that the only solutions to the problem of environmental degradation are heavy-handed state regulation or resource privatization. In Democracy and the Environment, we will work to problematize this perspective, exploring the range of ways in which democratic institutions emerge to manage environmental issues, often with more sustainable and just outcomes. We will examine the re-emergence of a democratic ethic in environmental governance today and assess the potential for participatory democracy to assist in world building at all scales from local to global. Student-led case studies on self-governance arrangements, ballot initiatives, activism and protest, eco-anarchy, and public deliberation will add specificity and nuance to more theoretical class discussions.

ENVS494101
ENVS: Senior Research Seminar I
Pisani Gareau, Tara
Fall 2022
This year-long seminar is for seniors who are majors in the Environmental Studies Program. To assist with the transition from college to the next stage of a student's career, the seminar focuses on the further development of applied multidisciplinary research, accessible writing, project coordination, and public speaking skills. Students spend the first semester engaging with scholarly materials and developing proposals for a research project. During the second semester, students complete their research projects, potentially collaborating with a campus or community organization to address an environmental problem.

Environmental Studies Courses: Spring 2023

ENVS107501
Understanding and Protecting Our Oceans in the Wake of Global Change
Humphries, Courtney; Oen, Vena; Olins, Heather C
Spring 2023
This is a Complex Problems course and is open to FRESHMEN only. You must also register for
the accompanying lab ENVS1076 or BIOL1707. The ocean, which covers more than 70 percent of
the Earth's surface, is vital to human societies. Yet, we have better maps of Mars than our own
sea floor. This course introduces students to what we know and don't know about marine
biodiversity and ecosystem services. It then describes the effects of climate change on the
ocean—including rising temperatures, acidification, and sea level rise—and the resulting impact
on life within and outside of the ocean. We end discussing the importance of effective
governance and explore innovative ways in which people are working to repair and protect the
ocean.

Where do contemporary environmental problems come from? Why is it so hard to resolve serious global environmental issues? Are environmental problems really social problems? This course will compel students to explore these questions, to devise answers to them, and to learn how to understand environmental problems with sociological analytical tools and methods. Students will explore the historical origins of the contemporary world, revisit the social and environmental changes brought about by the Industrial Revolution, the World Wars, and the liberalization of capitalism, and, through first-hand research, ponder how globalization might be the start of a new environmental transformation for society.

ENVS225601
Environmental Law and Policy
Maguire, Fiona B;Plater, Zygmunt J;Skillin, Benjamin C
Spring 2023
This course is intended for undergraduates interested in environmental law, legal process, and environmental policy. For pre-law and non-pre-law students. The course is team-taught under the supervision of BC Law Professor Zygmunt Plater. The course introduces students to the structure, doctrines, and logic of environmental law and of the American legal system. Includes environmental protection issues of air and water pollution, toxins, parks, wildlife, energy, natural resources, historic preservation, environmental justice, and other timely issues. Covers virtually all elements of the legal system, including basic common law lawsuits, constitutional litigation, complex agency regulations, creation and enforcement of international legal norms, and ethics and policy issues.

Murphy, Kevin F; Plater, Zygmunt J; Rehman, Faris
Spring 2023

This course is intended for undergraduates interested in environmental law, legal process, and environmental policy. For pre-law and non-pre-law students. The course is team-taught under the supervision of BC Law Professor Zygmunt Plater. The course introduces students to the structure, doctrines, and logic of environmental law and of the American legal system. Includes environmental protection issues of air and water pollution, toxins, parks, wildlife, energy, natural resources, historic preservation, environmental justice, and other timely issues. Covers virtually all elements of the legal system, including basic common law lawsuits, constitutional litigation, complex agency regulations, creation and enforcement of international legal norms, and ethics and policy issues.

**This Land is Your Land: U. S. Environmental History**  
**Valencius, Conevery B**  
**Spring 2023**

Fulfills the US History requirement for Majors  
How have different environments, places, and resources shaped American history? We will survey main themes and events in the environmental history of the United States. We move from colonial-era differences in land use through contemporary environmental debates. We ask how American communities have used, defined, and fought over places and natural resources, from bison herds to nuclear stockpiles. We investigate intriguing aspects of our local Massachusetts environment: the Emerald Necklace of parks, the brass hoof prints of Harvard Square, even our nearby reservoir. No background in history is necessary to thrive in this class. Students in the sciences are welcome.

The State of Affordable Housing in the States
Van Meter, Robert H
Spring 2023
Course offered for Sophomores only. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

Over the past 50 years, the industrial agriculture complex has led to amazing increases in grain yields which has met the basic calorie needs of much of the world's population. However, intensive production practices have come at a high environmental and social cost and climate change now presents many new challenges to farmers. A new approach to food production is needed—one that not only restores the ecosystem services on farmland and reduces fossil fuel inputs, but also one that supports farm families, builds communities of cooperation, and promotes human health. This course explores the historical basis of agriculture, the concept of sustainability, the agricultural practices that lead to improved ecosystem services, and alternative marketing approaches and cultural relationships. Students will come away from this course with an in-depth understanding of what sustainable agriculture is and how it can be applied to various situations in the world.

ENVS333101
The Geopolitics of Water
Sullivan, Leeann
Spring 2023
Less than 3% of all of the water on our blue planet is freshwater, with the vast majority locked in glaciers and icecaps. What remains accessible for human and more-than-human use could best be defined as chaotic showing general disregard for man-made borders and political agreements. How societies harness, control, distribute, and share water is a question of survival and one whose answer has changed dramatically over time with significant ecological and political ramification. In this class, we will draw on case studies to explore water as a geopolitical issue, focusing in particular on how states interact across borders and across the globe in the management and conservation of these life sustaining resources. Student-led research on water conflict and cooperation will enhance in-class discussion on the future of water politics in a rapidly changing world.

**ENVS333601**  
**Politicizing Environmental Problems: From Conflict to Consensus**  
**Sullivan, Leeann**  
**Spring 2023**
In a pluralistic society, solving our environmental challenges means resolving political conflict, addressing legitimate questions about who gets what, when, and how. While there are no inherently right answers to these questions, deliberative democracy can offer important opportunities for us to engage in meaningful and civil debate about the best path forward. In this class, we will talk about the promise and potential of public deliberation as a means of solving environmental conflicts across political scales from the local to the global. We will also practice the art of facilitating public forums engaging with both dispute resolution and creative world-building - to help move groups with diverse opinions toward consensus around contentious topics. Particular attention will be paid to issues of energy, food, and wilderness and wildlife conservation.

ENVS335401
Wildlife and Society
Sullivan, Leeann
Spring 2023
Despite our best attempts to separate ourselves from nature in the modern era, humans and wildlife exist in a complex symbiotic relationship that is defined by both mutual benefits and mutual risks. Through a coupled human and natural systems framework, this class will critically consider how we relate to wildlife in society (both in the US and globally) and what that means for our ability to ensure the thriving of both human and more-than-human communities. Special attention will be paid to themes of human-wildlife conflict and co-existence, urban and suburban wildlife management, sustainable fisheries, and in-situ and ex-situ conservation strategies. Students in this course can expect to be active participants in their own learning, engaging in rigorous class discussion, co-teaching, and the thoughtful application of course themes.

**Research Methods in Environmental Studies**

Satcher, Lacee

**Spring 2023**

For Environmental Science majors and minors only.. The course is designed to prepare majors and minors in Environmental Studies to pursue a senior thesis or seminar research project. The course helps students develop a research question from their interest and curiosity in an environmental topic. Students are introduced to qualitative, quantitative, and spatial methods that are used in environmental studies research. Students then design a study to answer their specific research question.

ENVS356201
Environmental Sociology I
Jorgenson, Andrew K
Spring 2023
This is an upper-division seminar that provides an overview of theoretical and empirical work in environmental sociology. After a brief introduction to the origins of the field, the seminar will cover topics that are representative of what is current in the area, especially bodies of empirical research that are national, international, and global in scope, and with particular attention given to how large-scale social institutions and organizational forms impact the environment. We will focus on the social dimensions of environmental impacts, the anthropogenic drivers of environmental impacts, and sociological research on solutions to environmental crises. A key takeaway of the course is the necessity in taking a structural approach to the study of socioenvironmental relationships. Attention will also be given to how environmental sociology makes fundamental contributions to interdisciplinary research in environmental studies and sustainability science. The course is required for all Environmental Studies majors.

ENVS400601
Place-making for a Net-Zero Future: Sustainable Architecture and Landscape Design
Burns, Jennifer L
Spring 2023
Since the rise of steam power in the nineteenth century, the American way of life has been premised upon ever-increasing consumption of fossil fuels in all aspects of our economy, from agriculture and manufacturing, trade and transportation, to communications and computing. In this course, we focus on a single aspect of this carbon-reliant economy, one that centrally and intimately shapes our patterns of life, our energy use, and our expectations of comfort. Focusing on architecture and landscape design, we review the dominant patterns of building and dwelling from before and during the Industrial Revolution in the U.S. We then examine a substantial series of alternative, sustainable strategies for constructing our shelters and their surrounding landscapes.

ENVS: Senior Research Seminar II
Pisani Gareau, Tara
Spring 2023
For ENVS majors and seniors only. This is the second-half of a year-long course. This year-long seminar is for seniors who are majors in the Environmental Studies Program. To assist with the transition from college to the next stage of a student's career, the seminar focuses on the further development of applied multidisciplinary research, accessible writing, project coordination, and public speaking skills. Students spend the first semester engaging with scholarly materials and developing proposals for a research project. During the second semester, students complete their research projects, potentially collaborating with a campus or community organization to address an environmental problem.

Environmental Seminar
Gareau, Brian J, PHD; Pisani Gareau, Tara
Spring 2023
This seminar is for seniors who are minors in the Environmental Studies Program. With the goal to serve as a bridge between the college experience and the next stage of one's career, students fine-tune their critical writing, research, project coordination, facilitation, and public speaking skills. We investigate, actively discuss, and write about contemporary environmental issues and solutions with the aid of weekly reading assignments and the knowledge and experiences each student brings to class. Students also engage in a semester-long research project, collaborating with a campus or community mentor organization to address a specific environmental problem.

Coming of Age: Crisis and Calm Revealed through Film
Michalczyk, John
Fall 2022

Core Renewal: Enduring Questions For Freshmen Only
Coming of age, whether in moments of conflict or peace, remains a central theme in both classic and contemporary films. Film adaptation offers opportunities to study issues confronted from early to late adolescence that affect our adult lives. Viewing moments of crisis and calm through the medium of film has aesthetic value and promotes increased visual and cultural literacy. The films serve as foundational texts, as students engage in understanding the complexities of adapting a singular account of adolescence from printed word to the screen so as to reveal the relevance for our own lives.

This survey of Russian cinema will focus on the development of the seventh art in Russia and the former Soviet Union from 1913 to 2017. Focusing on the films and theoretical writings of three canonic Russian film makers (Sergei Eisenstein, Andrey Tarkovsky, and Andrey Zvyagintsev), we will also explore film theory outside Russia and watch other individual Russian film masterpieces, some at the margins of the canon. While film artistry will be at the center of our attention, Russian and Soviet history of the period will also be explored. We will screen our films on Tuesday evenings, hold class on Wednesdays.

Italian Cinema: Passion, Politics, and Pain
Michalczyk, Susan A
Fall 2022
Social issues dominate Italian cinema from the post-WWII era to the present, as filmmakers interpret individual historical moments, literary works, and cultural events, bringing a collective experience of the human condition onto the screen. Visconti establishes the foundation that Fellini, Bertolucci, Rosi, and other directors build upon, creating visual images that evolve from Giovanni Verga, and his written portraits of verismo. Exploring what is true and real, questioning the complexity of the human condition in moments of comedy and tragedy, these films depict socio-economic, philosophical, and political issues, always revolving around the vulnerability and struggles of relationships. Films include: La Terra Trema, Ossessione, Open City, Bicycle Thieves, La Strada, Il Conformista, Tree of Wooden Clogs, Bread and Chocolate, Life is Beautiful, Tre Fratelli, Cinema Paradiso, Bread and Tulips, Gomorrah.

Screenwriter
Robotham, Thomas
Fall 2022
This course will explore the role of the screenwriter in the film making process, from original idea to the finished screenplay and film. Students will also learn how the screenwriter adapts source material such as plays, novels, and real life events. Along the way, students will learn about each of the elements of screenwriting including: structure, character, dialogue, theme, genre and breaking rules. Both individually and as a classroom project, students will read screenplays and analyze the resulting films to gain a better understanding of how those elements work in combination and contribute to the finished product.

FILM330301
Advanced Screenwriting
Conroy, Mary K
Fall 2022
Limited to 15 students. This course is for students interested in writing for film, applying the knowledge gained in FILM3301 toward their efforts at writing their own screenplays. In the early part of the class, students will select an idea for a film and transform that idea into a story suitable for the screen. From there, in a round-table setting, students will complete a series of exercises to help them focus their stories, eventually moving on to writing a finished first act (28-30 pages) by the semester’s end.

Filmmakers build upon relevant issues in contemporary society, as well as meaningful historical events in order to enlighten, inspire and entertain the audience. Whether through brutally honest portrayals of loss and suffering, or through comedic interpretations of life’s challenges, writers and directors search for opportunities to re-examine the ways in which each generation learns from or repeats the past. Film adaptations and original screenplays can prick the conscience of an audience, through the creative techniques and use of media by filmmakers. Films cover a range of social issues, including race and gender (American Violet), disabilities (Lives Worth Living) sports (The Express: The Ernie Davies Story), immigration (The Visitor), business (The Constant Gardener), politics/climate change (Don’t Look Up), and extremism (Betrayed).

FILM330901
Nazi Film, Nazi Art: The Power of Propaganda
Michalczyk, John
Fall 2022
From as early as Hitlers writing of Mein Kampf in the early 1920s with a chapter on propaganda, to the end of WWII in 1945, the National Socialist Party used this form of manipulation to convince the German Volk that they were the Master Race. With films such as the epic Triumph of the Will and the anti-Semitic pseudo-documentary The Eternal Jew, as well as exhibitions of Degenerate Art and Degenerate Music, gradually the Germans witnessed the rise and fall of the Third Reich the Gtterdmmerung, the Twilight of the Gods.

**FILM331501**  
**Film Noir**  
**Long, Carter E**  
**Fall 2022**  
We will explore the history of the enigmatic Hollywood style from its origins in German Expressionism and Hard Boiled Fiction through its classic era, and finally into its rebirth as revisionist neo-noir in the 1970s. The course will examine how American social and political history factored into noir's sudden appearances, and study theoretical concepts of genre, space, gender, and self-perception. Directors include Wilder, Tourneur, Aldrich, Altman, Polanski, and Lynch.

FILM331601
Film Directing
Fano Villaescusa, Laimir
Fall 2022
This course explores the role of the director of narrative films throughout the different stages of the production process. Topics include film grammar, script analysis, previsualization techniques, staging, continuity, and camera coverage. Particular attention will be given to the creative collaboration between directors and actors during auditions, rehearsal sessions, and filming. Students will be expected to develop a directorial style by planning, shooting, and editing several silent and dialogue scenes from published or original screenplays. (Required: Filmmaking I)

FILM336201
Film Theory and Criticism
Pastel, Renee L
Fall 2022
Satisfies the required theory course in the Communication major. This course is structured around the question of how visual media convey and influence the world in which they are created. By surveying some of the major questions raised by theorists from the beginnings of film as a medium to the present, students will gain critical lenses through which to historically and theoretically engage visual media. We will cover topics including: film aesthetics; Marxist, psychoanalytic, feminist, critical race, and queer theoretical approaches to film criticism; television studies; and new media theories. Students will learn how to analyze film on a formal level, taking into account how form creates meaning, and to think historically and theoretically about how film as art and commerce has contributed to shaping "smaller screen" media forms and understandings.

**Credits:** 3  
**Room and Schedule:** Gasson Hall 204 MW 03:00PM-04:15PM

**FILM338901**  
**American Directors Series**  
**Chopra, Gautam**  
**Fall 2022**  
This series will concentrate on several directors who have chosen to work on the East Coast rather than in the Hollywood mainstream, such as Martin Scorsese, Spike Lee, Sidney Lumet, Elia Kazan and Woody Allen. Many have roots in New York and use the City not only as a setting for their narratives but as a metaphor for the human condition they explore. This school of Urban Realism has enriched American film with a gritty documentary strain that stands in strong contrast to the polished Hollywood style.

FILM170201
Why Do the Wicked Prosper?: Portraits of Good and Evil in Film
Michalczyk, John
Spring 2023
This is an Enduring Questions course and is open to FRESHMEN only. You must take UNAS1728 with this course. Portraying good and evil remains a central theme throughout the history of film, as does the eternal question of injustice: Why do the wicked prosper? The search to find meaning and explanations for the bittersweet twists of fate and the flaws of human nature can be memorialized in visual images on the screen. This course will explore the creative process of interpreting these encounters with good and evil, through analysis of techniques of film-making and presentation of narrative that reflects the ambiguity and uncertainty of life.

FILM224001
Memory and Media
Pastel, Renee L
Spring 2023
Satisfies one of three electives courses required within the Communication major. This course focuses on the relationship between memory and moving images. How can film, television, and online video capture and reproduce memory? What role can moving images play in shaping memory, both on an individual and collective level? What claims does the medium make about accurately presenting the past? Through close analysis of film, television, and digital media, we will practice making textually-grounded arguments about specific works while thinking about the broader implications for understanding media and memory. Drawing on material from a variety of time periods and genres, we will use moving images to explore how remembering (and forgetting) shapes a narrative, both on and off the screen.

German Cinema: Light and Shadows
Michalczyk, Susan A
Spring 2023
The course focuses on four critical periods in the evolution of German cinema. Beginning with German Expression in the early 1920s with influential directors such as F.W. Murnau, Fritz Lang and Josef von Sternberg, German film establishes itself with new film techniques and socio-psychological themes. In the post-World War I milieu, these films reveal the dark side of German life and reflect both the national and international Weltanschauung. These Expressionist films were soon banned in the Nazi era, a film period dominated by the works of Leni Riefenstahl. In the 1960s, a New German Cinema movement enters the scene with a fresh level of expression in the works Fassbinder, Herzog and Wenders gaining a global audience. More recently, a new generation of film directors are choosing to return to the shadows of the past with universally appealing works that shed light on the strength and weakness of our human condition, as viewed through existential historical themes that focus upon coming to terms with the long-lasting effects of living through war and oppression.

Autobiography in Film: Re-Imaging Life Stories
Michalczyk, Susan A
Spring 2023
The course will be structured around close analysis of the narrative arc and its adaptation from lived experience to visual expression, an approach that presents students with opportunities to consider a range of interpretations of biographical/autobiographical films. The effectiveness of portraying individual experiences that allow for an understanding of the universality of the human condition depends on the techniques and approaches of the filmmakers. In their reinterpretation of real life accounts, whether from unknown or famous people and events, directors recreate the telling of someones story, through feature films, documentaries, relying upon the genres of comedy and tragedy to share personal stories that inspire, teach, and encourage viewers to better understand others, as well as themselves. Beginning with Roger Eberts Life Itself, and Fellinis Amarcord, students will explore the genre of stories of life (Bios) and of Self (Auto) in classic and contemporary films, including, Frida, 400 Blows, Sunshine and Oranges, BlacKkKlansman, Pain and Glory, Testament of Youth, Love, Marilyn, Being the Ricardos, and Belfast.

FILM331101
New Hollywood Cinema
Fulton, Maxfield
Spring 2023
Survey of American narrative film since the 1960s, when the demise of the studio system, the relaxing of censorship, and the influence of foreign productions ignited a revolution in American filmmaking. We will examine how post-classical filmmakers revised the language of classical Hollywood cinema in light of radical social, economic, and technological changes in U.S. culture. Directors may include Hitchcock, Penn, Coppola, Polanski, Altman, Scott, Stone, Craven, Cameron, Jonze, Tarantino, Bird, Bigelow, McQueen.

FILM331901  
Advanced Digital Media, Moving-Image Projects  
Friedman, J Georgie  
Spring 2023
This class is for advanced digital-media art and film students working in any moving-image medium (video art, experimental film, animation, programing-based imagery, video and performance, etc.) to refine and develop their ideas, skills, and presentation methods. This class is highly recommended for all Art Majors/Minors who want to incorporate moving-image elements into their thesis work. Though a variety of advanced techniques in Adobe Premiere, After Effects, and other programs will be demonstrated, students are REQUIRED to be proficient with the equipment and programs used in their type of moving-image production. Based on individual goals set in the beginning of the semester, students are expected to complete 3-4 short to medium pieces, or one larger piece over the semester. Students are asked to investigate methods for moving-image presentation and viewer experience/interaction beyond the traditional "movie" screen or monitor, including: multi-channel works; object-based or site-specific video installations; interactive pieces (triggered by motion, sound, or physical inputs); or mobile based pieces that utilize geo-location or augmented reality; etc. Based on a students goals, independent research and skill building may be required. Class sessions will be a mix of screenings, reading discussions, technical demonstrations, in-class work time, peer workshopping, and class critiques of students' projects. Artist talks or exhibition visits may be assigned, based on local event programming. The goal of this class is for students to refine their concepts, polish their formal and technical skills, and make deliberate presentation choices, so all elements add meaning to their moving-image works.

FILM333101
Independent American Film
Chopra, Gautam
Spring 2023
How might contemporary independent cinema be seen as both an alternative and a response to mainstream Hollywood fare? How has the acquisition of indie studios, such as Miramax and New Line Cinema, transformed the industry? Has the affordability of technology and accessibility of audiences truly created a democratization of film? This course emphasizes critical examination of contemporary American Independent film from the 1980s films of John Cassavetes, Steven Soderbergh, Spike Lee through the 1990s and 2000s with features from Kevin Smith, Allison Anders, Richard Linklater, Quentin Tarantino; shorts from Wes Anderson and Jane Campion; and current festival hits.

FILM339401  
Documentary Film Production  
Rossi, Michael A  
Spring 2023  
This advanced, hands-on course focuses on student production of documentary films and will fulfill the senior production requirement. The prerequisite is either Filmmaking II or Cinematography. After learning the components of contemporary documentaries, students will produce their own original 20-minute film based on a polished script, technical filming, and skilled artistic editing.

FILM339601
Advanced Screenwriting II
Conroy, Mary K
Spring 2023
Limited to 12 students. In a round-table setting, students will continue to work on the script they began in Advanced Screenwriting. The course will feature more exercises and outlining, leading to the writing of the remainder of their script. As in Advanced Screenwriting, students will critically examine each other's exercises and writing under the guidance of the professor. It is anticipated that students will complete a finished first draft of a full length feature film (100-120 pages) by the semester's end.

FREN106501
Intensive Reading in French
Bold, Stephen
Summer 2022
The course objectives are (1) to develop the ability to read French readily and accurately through the study of grammatical structures and vocabulary; (2) to develop techniques for the reading of French-language material; and (3) to provide practice in the translation of French texts in general and of texts related to the students' major fields of study and research. This course may be taken for a grade, for pass/fail, or audited (as a registered auditor). Students desiring a pass/fail grade must file this grading preference with the Graduate School of Arts and Sciences. This is a 12 week course and meets for the entire summer session.

FREN110901
Intermediate French I
Javel, Andrea M
Summer 2022
Conducted in French The emphasis will be on building upon prior study and developing a practical knowledge of the French language, as spoken by native speakers in contemporary France. Our goal is to help students develop oral and written proficiency in the language. The emphasis is on contemporary French culture and history, vocabulary expansion, accuracy of expression, and interactive language use. Short literary and cultural readings will provide authentic insight. Classroom work will be supplemented with web-based assignments and an online audio program.

FREN330301
French Writing Workshop
Celestino Montenegro, Ana Cristina
Fall 2022
Conducted in French Focusing on works of literature, though also including art works and film, this course will introduce students to learning and practicing analytical and expository writing skills. It will allow students to identify key formal and content features of texts from a variety of periods and genres, and to write about them in academic French. Students will acquire practice in various French writing techniques: le resume, l'explication de texte, le commentaire, la dissertation.

Narrative and Identity: The Story You Tell Yourself
Newmark, Kevin
Fall 2022
Conducted in French
Fulfills one of the 3000-level requirements for the French major. Satisfies Foreign Language Proficiency core requirement. This course is designed to help students with a good background in French to progress to the next level. Students in this course will continue to solidify their mastery of French grammar through structural exercises tied to readings, discussion, and written analysis of selected short stories, novels, and narrative film. The stories have been chosen and presented to allow students to progress substantially both in their basic reading skills in French and in their awareness of critical aspects of storytelling such as narrative voice, point of view, and plot structure.

Credits: 3
Room and Schedule: Stokes Hall 205S TuTh 03:00PM-04:15PM

**FREN339301**  
**Life at the Limit: Narratives of Transformation**  
**Kearney, Anne D**  
**Fall 2022**  
This course is conducted in English. This course will consider texts that follow the path of a person making a journey from alienation, loss, or hardship through a turning point. We will read stories of people who, caught in a major life crisis, still manage to keep a deep connection with themselves and the world, people who ultimately survive to share their experience with others in writing. Students will read correspondence between Theo and Vincent Van Gogh, a short story by Fyodor Dostoevsky, excerpts from Les Misérables, a memoir by Primo Levi, and various texts by Albert Camus and several other authors. Satisfies Core Requirement for: Literature

**Credits:** 3

FREN442101
Fight Like the French: Famous Quarrels and Polemics in French Culture
Celestino Montenegro, Ana Cristina
Fall 2022
Conducted in French. Elective for French major or minor. French literary history is filled with quarrels, and French society as a whole is prone to an agonistic discussion of ideas. This course will focus on both the history and the practice of debate. We will examine the first French literary quarrel-initiated by a fourteenth-century woman writer against a misogynistic "best-seller" of the time—as well as the current attack on the social science in France and the way it relates to previous historical quarrels. We will also study the history of debate and the figure of the French public intellectual, as well as the techniques of debate, which we will practice by reenacting these debates in class and in videos.

Credits: 3
Room and Schedule: Gasson Hall 207 M 03:00PM-05:20PM
Satisfies Core Requirement: None
Prerequisites: Course taught in French. Need to have taken TWO courses from the following: FREN3303, FREN3305, FREN3306, FREN3307, FREN3308, FREN3309 or with Permission of Instructor

FREN443101
Classicism in Seventeenth Century French Literature
Bold, Stephen
Fall 2022
Conducted in French. This course offers an advanced introduction to the literature of France's classical age. We will conduct a close reading of some of the century's greatest works by its greatest writers (Corneille, Descartes, Racine, Pascal, Lafayette, et al.) and covering the major genres (tragedy comedy, philosophical essay, novel). Along the way we will come to understand better the meaning of Classicism in French literature, the complex and delicate doctrine of simplicity that tries to capture light not in a bottle but in a text.

**Credits:** 3

**Room and Schedule:** Lyons Hall 315 W 03:00PM-05:20PM

**Satisfies Core Requirement:** None

FREN443901

**Painters of Modernity: Baudelaire and Flaubert**

**Newmark, Kevin**

**Fall 2022**

Conducted in French. Elective for French majors or minors. Two of the greatest masterpieces of French literature were published in the spring of 1857: Baudelaire's collection of lyric poetry, Les Fleurs Du Mal and Flaubert's novel, Madame Bovary. This course will read these texts carefully in order to determine how and why the modernity that has been attributed to them has not ceased to function as a provocative question for literary, philosophical, and historical reflection.

**Credits:** 3

This course is designed to familiarize students with the political and social features of contemporary France while helping them to develop oral communication skills in French. Using authentic documents (television, videos, films, songs, newspapers, and magazines), we will discuss current events and socio-political issues. Students will develop their vocabulary, increase their knowledge of idiomatic expressions, and further their command of spoken French by engaging in structured dialogues based upon real-life situations.

FREN330601
Narrative and Identity: The Story You Tell Yourself
Celestino Montenegro, Ana Cristina
Spring 2023
Conducted in French
Fulfills one of the 3000-level requirements for the French major. Satisfies Foreign Language Proficiency core requirement. This course is designed to help students with a good background in French to progress to the next level. Students in this course will continue to solidify their mastery of French grammar through structural exercises tied to readings, discussion, and written analysis of selected short stories, novels, and narrative film. The stories have been chosen and presented to allow students to progress substantially both in their basic reading skills in French and in their awareness of critical aspects of storytelling such as narrative voice, point of view, and plot structure.

Credits: 3
Room and Schedule: Stokes Hall 286S TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: French CCR II (FREN2210). Students with just four years of high school French or CCR I (FREN2209) may enroll with instructor's permission.

**FREN440401**  
**How to Begin Thinking: Aftermaths of Twentieth-Century Literature, Philosophy, History**  
**Newmark, Kevin**  
**Spring 2023**  
Conducted in English: Undergraduate Elective. Cross listed with English and Philosophy. "Thinking," the French philosopher Emmanuel Levinas once suggested, "probably begins through traumatisms." This course will study a series of disruptive and transformative events that have indelibly marked the twentieth century. What is the task of thinking for a European tradition displaced internally by the Holocaust and externally by the end of colonial expansions into other continents? Authors will include Levinas, Derrida, Nancy, Saussure, Barthes, Duras (in English translation from French); Borges and Dorfman (in English and English translation from Spanish); Calvino (in English translation from Italian); and Descartes (in English translation from Latin). A German component (in English translation) will consider Husserl and Heidegger as a counterpoint to the European tradition of Romance languages, literatures, and cultures.

FREN441901
Order and Subversion
Celestino Montenegro, Ana Cristina
Spring 2023
Course taught in French. Following the notions of Order and Subversion, this course will concentrate on four periods and four themes of French literature and culture: Chivalry in the Middle Ages, Carnival in the Renaissance, Court Society in the seventeenth century and Enlightenment in the eighteenth century. Through texts and films, we will explore how order and subversion complement each other. For each period we will also read a canonical piece of criticism that represents a different critical approach. In this way, we will arrive at a more nuanced and relevant understanding not only of pre-modern French literature and culture, but also of textual criticism.

FREN443801
La Fontaine and Perrault
Bold, Stephen
Spring 2023
Conducted in French
Fulfills one of the 400-level requirements for the French major or minor. Jean de La Fontaine and Charles Perrault occupy special places in the history of seventeenth century French literature: though they practiced forms apparently aimed at a young audience (fables and fairy tales) they also played crucial roles in cultural and political debates that divided intellectual of the times. We will rediscover these minor classics with new eyes and multiple perspectives.

FREN448801
Mythologies of the Modern City
Yamaguchi, Liesl
Spring 2023
Conducted in French. Fulfills one of the 4000-level requirements for the French major or minor. In this course, we will explore the city of Paris through the imaginations of the late nineteenth-century writers and artists who distilled many of the myths that still enshroud it today. Drawing together literary and visual representations of the urban space, we will focus particularly on the perspective of the urban subject, and the role of that subject's sensory experience in the forging of modern art. Readings will include works of prose, poetry, and theory by Charles Baudelaire, Émile Zola, Walter Benjamin, Edgar Poe, Marceline Desbordes-Valmore, Honoré de Balzac, and Roland Barthes.

Credits: 3
Room and Schedule: Gasson Hall 308 Tu 03:00PM-05:20PM

FREN775001
Reading Jacques Derrida
Newmark, Kevin
Spring 2023
This course will examine some of the fundamental ways that the work of Jacques Derrida has contributed to altering the context in which the humanities can be understood and studied within the modern university. It will take examples from Derrida's repeated interventions in such disciplines as literature, philosophy, theology, and history. By situating Derrida's work at the margins where accepted demarcations between the disciplines begin to blur, the course will suggest new possibilities for conducting interdisciplinary work in the future.

GERM216301
Triumphant Calamity: The Modern Condition
Bowles, Daniel J
Fall 2022
In this seminar we explore the rich time period of literary modernism (1900-1930) through German literature, film, and art. Our aim is to articulate how arts and letters variously reckoned with and gave voice to the aesthetic, historical, social, and political upheavals of an era wracked by dramatically new paradigms for modern life: technological advancement but horrific new wars, unimagined knowledge but a questioning of the very means by which we know, a novel science of the soul but growing alienation from reality and the self, new rights and privileges for the disenfranchised but stark disparities in urban and rural life. Readings include works by Nietzsche, Rilke, Kafka, Mann, Freud, and Keun, and screenings include films by Lang, Murnau, Wiene, and Sagan.

GERM224001
King Arthur in German Literature
Resler, Michael
Fall 2022
Conducted in English with all texts in English translation.
Counts toward German major, German minor, and German Studies minor. A study centering on the most popular and enduring of all medieval legendary figures. We will examine the early texts from which the Arthurian mythology took root and contributed to the eventual spread into Germany of the tales of King Arthur and the Knights of the Round Table. We will then focus on a close reading of four or five of the most significant Arthurian romances within the German tradition. In addition, we will systematically trace the relationship between this highly idealized world of literary knighthood and real-life contemporary historical and social events of the twelfth and thirteenth centuries.

Credits: 3
Room and Schedule: Lyons Hall 207 MWF 12:00 Noon-12:50PM
Satisfies Core Requirement: Literature
GERM300001
History of German Literature
Burwick, William
Fall 2022
An introduction to the study of German literature, including field trips and a special unit on Goethe's Faust. Selected texts from the Middle Ages to 1800 will be analyzed against the background of historical events, European literary movements, philosophy, music, art, and architecture. In addition, various language learning activities, such as a review of advanced grammar points, vocabulary building exercises, short writing assignments, and oral reports help students improve their overall proficiency in German.

GERM669901
Honors Thesis
The honors thesis in German Studies is offered to interested students who maintain a cumulative average of at least 3.3 in German. These students may begin a six credit research project that will lead to a 60 to 80 page honors thesis completed during the fall and spring of their senior year. The thesis is a major scholarly enterprise entailing independent research and writing; the final product is an essay embodying the results of original research and substantiating a specific view of the subject matter. Interested students should initiate the preparatory planning during junior year.

GERM200201
German Composition and Conversation II
Bowles, Daniel J
Spring 2023
This course is a continuation of GERM2001 and is designed to improve proficiency in spoken and written German. Through a broad spectrum of regular creative-writing and conversational exercises, assignments, and projects, as well as an in-depth review of phonetics and complex grammar topics, students will expand and refine their German to achieve advanced autonomous competency in the language. Readings and discussions focus on authentic contemporary texts and cultural topics.

Credits: 3
Room and Schedule: Stokes Hall 401N MWF 09:00AM-09:50AM
Satisfies Core Requirement: None
Prerequisites: GERM2001 or placement test.New Course Number as of Fall 2019. Formerly
GERM200301
Special Topics: Fantastic Tales of Horror
Bowles, Daniel J
Spring 2023
Imaginative fairy tales, monstrous spiders, magic snakes, soulless robots, psychological demons-the German literary tradition has a long legacy of fantastic tales that probe the limits of human imagination and inventiveness. Reading key short stories and novellas, students investigate this topic with an eye toward understanding how the literary chimeras of the mind reflect cultural, social, historical, and political anxieties. What does the fantastic tell us about ourselves? By the end of the semester, students will have sharpened their analytical and conversational skills in German with works by Goethe, the Brothers Grimm, Tieck, E.T.A. Hoffmann, Droste-Hulshof, Keller, Storm, and others.

Credits: 3
Room and Schedule: Stokes Hall 401N MWF 10:00AM-10:50AM

Conducted in English.
Required for the German Studies minor.
Counts toward German major and German minor.

This course provides a multi-dimensional look at post-war Germany, East and West. Politics, social and economic structure (East versus West), music, art, literature, philosophy (Critical Theory), the crisis and reform of the West German university system, the young generation, and Americanization will be discussed. Other topics include radicalism/extremism/protest movements (including terrorism), coping with the past (National Socialism), the Revolution of November 1989, and the legal ramifications and unsolved problems deriving from reunification.

GERM300901
**Explorers, Ethics, and Science in German Fiction**
Burwick, William
Spring 2023
Given that Germany remained a concept rather than a nation for much of its history, its cultural products tend to view the notion of Germany as something emergent, rather than something being, or static. Since 1800, there have been multiple Germanies, each with their own cultural policy, and conceptions of a future with Germany in it. Even today Germany remains in a process of reinterpretation and reinvention due to the aftershocks of 20th century crises, human migration, and anti-modern tendencies on both sides of the political aisle, which challenge the notion of what a Modern Germany is or ought to be. This course assumes that the notion of Modernity is best understood in the plural, and not in the singular. By focusing on prophecy, speculative fiction, science fiction, and utopian literature, this course critically examines various Modernities in the German cultural sphere as well as Afro- and Turkish German diaspora. The course is conducted in German.
