Focuses on the teaching and learning of language arts in the elementary grades. Students will be exposed to theoretical approaches to both oral and written language development in addition to a wide variety of teaching methods. Students will have the opportunity to apply their learning through practical lesson development, and encouraged to reflect on their experiences via the theoretical perspectives highlighted in the course. Student diversity and its implications for teaching language arts will be an integral theme. Students will draw on their experiences in their prepractica to apply and reflect on learning as they mediate theory and practice.

Teaching Reading
Beauchemin, Faythe P
Spring 2024
This course is designed to offer preservice teachers theoretical and practical knowledge and experience into teaching literacy to elementary age students. Emphasis will be placed on the social, political, and cultural context of reading instruction. Students will gain understanding of major theoretical perspectives on literacy development and the myriad strategies for teaching reading in a variety of contexts. Students will also be expected to spend time in a context where they can gain experiences in providing reading instruction in a relevant and productive way.

Teaching the Social Sciences and the Arts
Giunco, Kierstin M
Spring 2024
 Provides prospective elementary teachers with opportunities to develop social studies and arts curricula for elementary age students and consider a variety of instructional approaches appropriate for this age group. Students will learn how to develop the skills of an historian and select and integrate knowledge appropriate for diverse learners. Curricular topics include evaluating context-appropriate materials, developing critical thinking, using and critiquing primary sources in the classroom, and developing varied learning activities through the use of multiple media.

**Teaching Mathematics and Technology**  
**Albert, Lillie**  
**Spring 2024**  
This course presents methods and materials useful in teaching mathematics to elementary school children. It analyzes mathematics content and pedagogy from both conceptual and practical perspectives. Emphasis is placed on the interconnections among theory, procedures, and applications that form the framework on which specific mathematics lessons are constructed. It examines the elementary mathematics curriculum through technology resources, addressing the different ways in which technology can be used. Activities include laboratory experiences with concrete models and technology as well as inquiry into the role of the teacher in the school community in the epoch of teaching for social justice.

EDUC210901
Teaching About the Natural World
Fogelman, Sarah E
Spring 2024
This course is designed to increase confidence, enthusiasm and knowledge for teaching elementary science. Science can be an essential part of an elementary classroom not only to achieve key science learning goals, but also as a means to engage and motivate students as well as support literacy and mathematics learning. An overarching focus of the course is the idea that doing science entails individuals using wide-ranging ways of acting, reasoning, and communicating with others to figure out phenomena. Science is not about memorizing facts; rather, it is about constructing, debating, and revising multiple explanations and models about the natural world. With this in mind, this course is designed to offer you numerous opportunities to read literature that illustrates this vision and to engage and reflect upon this type of science teaching and learning.

Secondary Curriculum and Instruction
Thakurta, Ankhi
Spring 2024
Provides an introduction to secondary teaching practices as well as an overview of the history and structure of secondary schools. Topics include curriculum theory and development, interdisciplinary teaching, teaching students with diverse learning abilities, application of educational research, assessment, national standards, and alternative models for secondary schools. Focuses on the role of the teacher in secondary education reform. Taught on-site and in conjunction with secondary education teacher candidates' first prepracticum experience, this course offers a unique opportunity for a cohort experience in which preservice teachers work closely with each other, high school faculty, the instructor, and urban students.

EDUC330801
Bilingualism in Schools and Communities
Yu, Qun
Spring 2024
Earning the TELL Certificate requires the successful completion of the courses EDUC3308 and EDUC6346 (for elementary teaching) or 6347 (for secondary teaching). In addition, students must complete a field experience in a classroom that includes bilingual learners and/or English language learners. This course is also part of the Foundations in Education minor and the Immigration, Education, and Humanitarian Studies minor at Lynch. This course prepares students to participate in increasingly multilingual and multicultural environments in order to better serve bilingual students, families, and communities. Building on theory, research, and practice from the field of bilingualism, second language acquisition, and education, students will learn about the processes of language and literacy development in children and adolescents who are exposed to more than one language, and the social and cultural contexts in which this development occurs. Through the use of case studies and school profiles, students will deepen their understanding of issues in bilingualism and bilingual education. Students will also have an opportunity to build cultural competence skills by learning about diverse communities in the U.S.

Reading and Special Needs Instruction for Secondary and Middle School Students

Montgomery, Nicholl D

Spring 2024
Develops knowledge of the reading process and how to "teach reading the content areas." Students will develop curriculum and instruction that integrates reading instruction in the content areas, addressing diverse learners. Involves understanding relationship among assessment, evaluation, and curriculum; learning what and how to teach based on student assessments; developing and providing scaffolded instruction that addresses reading comprehension and critical thinking; and integrating reading, writing, speaking, listening, and thinking into content curriculum. Also addresses how to help students comprehend non-printed text.

Senior Inquiry Seminar
Homza, Anne E
Spring 2024
This capstone inquiry seminar requires teacher candidates to continue to develop an inquiry stance in their practice through the systematic analysis of teaching and learning in their classroom experiences. Grounded in a theory of teacher education for social justice that encourages practitioners to challenge educational inequities by inquiring into practice, this course advances teacher candidates' skills in planning, delivering, assessing, and analyzing instruction that promotes pupil learning and enhances their life-chances.

Inclusive Education Field Observation
Scanlon, David
Spring 2024
Open to undergraduate majors in the Morrissey College of Arts and Sciences, the Inclusive Education Minor is offered in the LSOE. The minor is designed to (1) introduce Morrissey College of Arts and Sciences students to the world of disabilities and special education with an emphasis on special education practice, and (2) enhance the ability of future professionals to meet the needs of increasingly diverse school populations. Classes address the nature and implications of disabilities and effective practices in special education. The minor consists of six-courses and a zero-credit field observation. Appropriate for those considering a career or further studies in education.

**Religion(s) and American Public Schools**

**Owens, Erik C**

**Spring 2024**

This course examines a controversial but surprisingly unfamiliar topic: religion(s) in American public schools. The class has three objectives: (1) to understand the complex role religions have played in the development of American public schools and the political and educational philosophy that undergirds them; (2) To examine the principled philosophical and theological issues behind contemporary legal cases about religion and public education; and (3) To understand how constitutionally sound approaches to religion in schools can help to modulate or resolve the pedagogical and administrative issues that arise across the curriculum and within school culture.

Art and Music in Early Childhood Education
Cristello, Karen M
Spring 2024
The main purpose of this course is to encourage early childhood educators to embrace the unique characteristics of young children's artistic and musical expression and appreciation of these experiences. By providing a foundational knowledge of young children's creative thinking and aesthetic development, the course will teach you how to apply effective pedagogical strategies in teaching art and music and how to integrate art and music across the early childhood curriculum. Students will learn how to bridge theory and practice through various readings, recorded lectures, and classroom examples. At the end of this course, you will be able to plan effective process-focused art and music lessons, use various materials and medium for artistic and musical expression, maximize the potential of your classroom resources, and use art and music to promote multiculturalism, diversity, and enhance family involvement.

Science Playing and Learning in the Early Childhood Classroom
Cristello, Karen M
Spring 2024
This course is designed to encourage and prepare early childhood educators for planning and implementing engaging and developmentally appropriate science learning experiences (Pre-K-2nd grade). An overarching focus of the course is instilling in students an appreciation for the wonder of science and the world around them. The course is divided into three science content areas: Earth and Space Sciences, Life Sciences, and Physical Sciences. Students will learn how to connect their teaching with new science, technology, and engineering standards. Through interactive activities and discussions including the review of video, science lessons, and research in science education, we will explore key elements and challenges of science teaching and provide a foundation for supporting science learning in the early childhood classroom.

Credits: 1
Room and Schedule: Dates: March 15th - April 5th; On-line Asynchronous
EDUC631601  
**Developmentally Appropriate Curriculum in Early Childhood Education**  
Cristello, Karen M  
**Spring 2024**  
This course focuses on the development and implementation of curriculum in early education. The Massachusetts Guidelines for Preschool Learning Experiences and the national standards for developmentally appropriate practices will be utilized throughout the semester. This course will highlight each of the curriculum domains (language/literacy, mathematics, science and technology, social studies, health, and the arts) while demonstrating how to build an integrated curriculum in an early childhood classroom. The importance and value of play in the early years will be emphasized, and strategies will be shared to help teacher candidates document student learning.

Classroom Management
Cass, Richard J
Spring 2024
ED201 is now EDUC6373. Focuses on observation and description of learning behaviors, with emphasis on examining the relationship of teacher behavior and student motivation. Prepares teachers to analyze behavior in the context of a regular classroom setting that serves moderate special needs students and to select, organize, plan, and promote developmentally appropriate behavior management strategies that support positive learning. Also considers theoretical models of discipline and classroom management strategies, and requires students to propose and develop a rationale for selection of specific techniques for specific classroom behaviors.

EDUC658801
Teaching and Learning Strategies - Moderate Support Needs
Scanlon, David
Spring 2024
Not open to non-degree students. EDUC6589 is intended for general educators and EDUC6588 is required for special educators. This course is intended to help prospective and experienced special education teachers and other educators develop a repertoire of skills for teaching students with mild/moderate (high incidence) educational disabilities. Participants will accomplish this goal by making connections among their knowledge of disabilities, special education policy and practices, assessments, education theory, and teaching methods. Students will learn how to develop, implement, and monitor individualized education programs, implement research-based effective intervention practices, and collaborate with others to meet the needs of special education students in inclusive and other educational settings. Successful students will have familiarity and competency with a variety of special education procedures and teaching approaches and specific practices. Appropriate for both elementary and secondary level education. Class sessions will routinely include time to practice skills being learned.

Teaching and Learning Strategies for Inclusive Education
Scanlon, David  
Spring 2024  
Designed primarily for elementary and secondary education teacher candidates and practicing educators, this course helps them develop an initial repertoire of skills for teaching students with educational disabilities. The primary emphasis of this course is on the education of students with high-incidence (mild/moderate) disabilities in inclusive classrooms. Participants will learn to develop comprehensive instructional plans fully inclusive of students with educational disabilities, utilized an IEP to guide instruction, develop accommodations and modifications appropriate to students and the curriculum, design individual, small, and large group instruction, and evaluate various service delivery options for educating students with disabilities.

EDUC715801
Jesuit Pedagogy
Casalini, Cristiano
Spring 2024
This is an online course. This three-credit, graduate-level online course examines the distinctiveness of the Jesuits' approaches to teaching and of their philosophy of education that have propelled their schools to unprecedented success over the centuries. One key to the unprecedented success of Jesuit education has been the tension between the recognizable mark of uniformity that long distinguished the methods, contents, and practices of Jesuit schools and their ability to adapt to different contexts and times. Both aspects—the uniformity and the adaptability—were explicitly supported by the "Ratio studiorum," the Jesuits' foundational plan of studies issued in 1599, which, despite the schools' many variations and complexities, has retained some influence over time. With the "Ratio" discarded, Jesuit schools had to clarify what made them distinctively Jesuit, reconciling their mission with the contemporary world. This three-credit, graduate-level class sketches the developments of Jesuit educational endeavors by focusing on both the permanent and changing traits of its distinctive pedagogy.

Teaching, Curriculum, and Learning Environments: Global Perspectives
Goodwin, Anne L
Spring 2024
What kinds of education are most needed for a world characterized by spiraling political polarization, increasing economic interdependence, rapid climate change, and a global pandemic like COVID-19? This online course will introduce students to contemporary debates about how educators should teach, what students should learn, and how schools should interact with society. The course is global in scope and will require in-depth study of country cases and failed and successful models of change. International students and U.S. students curious about other countries' approaches to education are strongly encouraged to enroll.

EDUC730201
Models and Theories of Instructional Design
Jackson, Richard
Spring 2024
Now well into the twenty-first century, schools struggle with the challenge of offering a high quality education for all learners regardless of race, family status, national origin, language, or ability. Increasingly, curriculum is accessed digitally and student work is generated and exhibited using technology tools. The once familiar artifacts of classrooms are rapidly giving way to radically new forms of teaching and learning. Within this context of change, this course reviews the evolution of theories of learning and instruction and then critically examines a range of contemporary models and theoretical frameworks. Learning activities in the course will allow participants to develop their own personalized framework for planning and implementing instruction.

EDUC730401
Family and Community Engagement
Graves, Kenneth E
Spring 2024
The purpose of this course is to introduce participants to theories, practices, and empirical research regarding family and community engagement in schools. The focus is on how school leaders--formal and informal--enact organizational models, educational programs, and political strategies that increase authentic relationships with parents and community members. Topics of study will include community schools/full service schools, parent involvement models, involvement of diverse families, grassroots organizing for community development, afterschool and community-based education, and school board-community relations. Direct participation in inquiry into school-community activities conducted on-site in schools and neighborhoods will be requirement of the course.

Globalization, Mobility, and Education
Thakurta, Ankhi
Spring 2024
This course addresses political economic issues related to migration and education. Drawing on the anthropology of globalization and sociology of immigration, the course reviews major theories of immigrant incorporation and exclusion processes in schools, examines case studies of im/migrants, refugees, and displaced persons and their adaptation processes in countries in the Global North and the Global South, and considers educational practices and policies that develop to address mobility in diverse contexts. The course asks how cultural, social, political, and economic factors influence im/migrant incorporation, and how educators can facilitate im/migrant students' opportunities for learning through changes in policies, pedagogies, and curricula.

EDUC730601
Language Learner in Global Perspective
Kim, So Lim
Spring 2024
This course provides an overview of language learning and the situation of second language learners in schools. First, we review processes of language learning and the challenges language learners face when they must simultaneously learn a language and learn subject matter in that language. We do this from a socialcultural perspective, exploring language learning as embedded in sociohistorically situated activities. We develop an account of how learning language is also learning culture. Second, we study how these processes vary across cultural contexts. Because language learning is woven into social and historical contexts, processes of language learning and schooling vary around the world. The course develops several case studies from different areas of the globe in order to illustrate how language learning and schooling can intersect in different ways.

**Graduate Inquiry Seminar: One**

**Higgins, Claire F**

**Spring 2024**

The course will coincide with the pre-practicum experience. It is designed to introduce teacher candidates to inquiry as stance and the skills necessary to conduct classroom-based research that leads to pupil achievement and teaching for social justice. The course is designed to help teacher candidates mediate the relationships of theory and practice, pose questions for inquiry, learn through reflection and discussion, learn from their students and colleagues, construct critical perspectives about teaching, learning, and schooling, and to improve teaching and learning. The second part of this sequence is 432 which is taken in conjunction with full-time student teaching (EDUC7420). Students who have successfully completed EDUC4231, Senior Inquiry, as part of their undergraduate teacher licensure program at LSEHD are recommended to take EDUC 7430 Advanced Graduate Inquiry Seminar.

Educating Learners with Disabilities
Francis, Heather
Spring 2024

This course focuses on the education of students with disabilities and other learners from culturally and linguistically diverse backgrounds. The goal of the course is to promote access to the general curriculum for all students through participation in standards-based reform. Universal Design for Learning (UDL) provides the theoretical framework for this course. Through an examination of historical milestones, landmark legislation, systems for classification, approaches to intervention, and the daily life experiences of diverse learners, students acquire knowledge about diversity and the resources, services, and supports available for creating a more just society through education.

EDUC746101
Human Rights Interdisciplinary Seminar
Lykes, M B
Spring 2024
The study of human rights defies disciplinary boundaries. This seminar, sponsored by the Center for Human Rights and International Justice, provides a rare space to examine human rights and international justice from interdisciplinary and transnational theoretical perspectives and through praxis. It brings together faculty affiliated with the Center, students from across the university, visiting scholars, and guest speakers to examine complexities and seeming contradictions vis-a-vis human rights and justice. The spring 2024 seminar will begin with an overview and brief historical review of human rights as understood in the West, drawing on both dominant discourses as well as less well-known histories from marginalized communities. We will then explore a series of complexities for those seeking to engage in human rights scholarship, advocacy, and activism. We seek to engage critically with human rights discourse and actions including the advocacy and activism of those on the move within and across borders as well as those seeking redress through transitional justice in the wake of both contemporary and historical gross violations of human rights as they intersect with violence and exploitation due to intersectional circulations of power vis-a-vis gender, culture/ethnicity, race, social class, and other categorizations or identities. We will also explore emergent decolonization practices including specific challenges from diverse communities of the global South who frame human rights and responsibilities within their Indigenous practices and cosmovisions, in ways that contest Northern epistemologies, understandings, and praxis. The Center invites applications from students enrolled in a graduate or professional degree in any of Boston College’s divisions. Undergraduate seniors will be considered, space permitting. Registration by permission only. Apply with a 1-2 statement of interest. Priority application deadline November 8; secondary deadline November 22. More info & apply at: www.bc.edu/content/bc-web/centers/chrij/academics/seminar.html

EDUC761007  
Clinical Experience  
Date, Danielle V; Ryan, Amy  
Spring 2024
A semester-long, full-time, five day a week practicum experience for graduate students seeking endorsement as a Teacher of Students with Moderate Disabilities or a Teacher of Students with Severe Disabilities. The course is designed to meet the Massachusetts Department of Elementary and Secondary Educations requirements for endorsement from Boston College. Students will be guided by a qualified school-based mentor (Supervising Practitioner) and a university-based mentor (Program Supervisor). In addition to registering for the course, students must complete the online application (https://forms.gle/UZZ5PWRNGYgz7UpC9t) during the semester preceding the placement by April 15 for fall placements and December 1 for spring placements. Contact the Office of Field Placement and Partnership Outreach at prac@bc.edu for more information.

This course is designed to provide pre- and in-service practitioners exposure to contemporary issues, perspectives, and approaches for literacy instruction in bilingual education settings. These bilingual education settings include transitional and dual language bilingual education programs, and we will explore literacy instruction as it pertains within and across these different program models. At its core, the course is designed to model the types of instructional approaches it espouses. The course will be delivered bilingually, in Spanish and English. As such, the language of instruction of the course, as well as expectations for participation, are fluid and variable. The course targets a range of literacy related topics (see topics grid below) all designed to orient the bilingual educator toward bilingual literacy instruction in contemporary bilingual education contexts.

EDUC920101
Discourse Analysis
Bottema-Beutel, Kristen M
Spring 2024
Discourse analysis (DA) is a broad field of research which incorporates theory and method from linguistics, anthropology, and sociology, among other disciplines. The common thread across these areas of scholarship is a commitment to studying language in action; to understanding what people do and mean with language, how people interact with language, and what people come to expect with language. Close analysis of language in context can illuminate the processes through which social constructs such as identity, power, and social selves are built. This course will cover the theoretical foundations of DA, in tandem with the methodological implications of each theory. Topics will include Speech Act theory, sequence organization and Conversation Analysis, Narrative Analysis, Classroom Discourse and Critical Discourse Analysis. The course will place an especial focus on the contributions of discourse analytic approaches to understanding educational contexts. Students will be asked to collect, transcribe, analyze, and present their own data over the course of the semester.

Historical and Political Contexts of Curriculum
Proctor, Charles P
Spring 2024
Introduces Ph.D. students in Curriculum and Instruction to the major curriculum movements in American educational history by examining the history and implementation of curriculum development on the macro and micro levels of schooling. Focuses on key campaigns and controversies in curriculum theory and practice, using primary source materials to place them within the academic, political, economic, and social contexts that have marked their conceptualization, and change inside and outside of schools.

Dissertation Seminar in Curriculum and Instruction
McNeill, Katherine L
Spring 2024
This is a student-centered seminar that is aimed at assisting doctoral students in identifying, shaping, and defining a research topic. Students will be expected to develop an Intent to Propose a Thesis, and to work toward the development of a full-scale draft of a Thesis proposal. Prior to the completion of the seminar, students will be expected to have established a Dissertation Committee.

African and African Diaspora Studies Courses: Summer 2023

AADS122601
Religion, Racial Justice, and Reconciliation in South Africa
Snyder, Joshua R
Summer 2023
The course requirements and evaluations are based on the following: daily journal and reflection pieces; class participation; and a final paper. For the duration of the program, the class will meet from 9:00 am to approximately 1:00 pm in the arranged classroom followed by lunch and an afternoon excursion. We will begin the course in Cape Town and then move to Pretoria for the remainder of the course. We will cover the following topics: key points in the history of South Africa; religious perspectives on apartheid; intellectual and armed conflict; fifty years of American foreign policy toward South Africa; Desmond Tutu and the Truth and Reconciliation Commission; reparations, forgiveness, trauma and healing; economic empowerment, gender, justice and religion; refugees, migrants, and xenophobia; HIV/AIDS; Christians-Jews-Muslims in South Africa; community organizing and economic justice

African and African Diaspora Studies Courses: Fall 2023

AADS111001
Introduction to African Diaspora Studies
McGuffey, Clifton S
Fall 2023
A survey of the African continent and the Diaspora that would include geography, history, politics, economics and literature. The purpose of the course is to introduce students to specific historical, cultural, social and political topics related to Africa and the African Diaspora. Because the scope of the course is so vast, we will explore important issues and themes to give students a desire to further pursue more specific classes in African and African Diaspora Studies. Boston College faculty members will be invited to lecture in their area of expertise specific to Africa and the Diaspora throughout the semester.

AADS111401
When Gods Begin Again: Intro to African and African Diaspora Religions
McElwaine, Michelle L
Fall 2023
This introductory course examines Indigenous African and African Diaspora religions from an interdisciplinary perspective. We explore Yorùbá and other African religions, along with African Christianity, Islam, Haitian Vodou, Cuban Santería, Brazilian Candomblé, Sango Baptist of Trinidad and Tobago, Rastafari and Obeah of Jamaica, Black American conjure, and Oyotunji Village. Important themes of religions in Africa and the Afro-Atlantic Diaspora are addressed, such as: the veneration of God(s), Spirit(s), Ancestors, and the natural world; divination, initiation, sacred space, and healing; the impact of slavery on conversion and continuity; fetish as a colonial construct; globalization, race, gender, and power. Ultimately, this course encourages students to reevaluate their understanding of Africana religions, recognize diverse cultural practices and ritual knowledge systems, and engage with oral, written and audio/visual texts that underscore the values of these traditions.

**AADS115501**
Introduction to African-American Society
McGuffey, Clifton S
Fall 2023
To get Sociology credit for the major or minor (or social science core credit), you must register for SOCY1043 rather than cross-listed course. In 1896, distinguished scholar W.E.B. DuBois became convinced that the experience of Africans in the Americas was so distinctive that it was imperative to study Black people in order to understand power dynamics at all levels of society. This course will study those power dynamics. While paying particular attention to the many ways that racial power dynamics have impacted all people of African descent in the United States, this course does not assume a uniform Black experience. We shall see that gender, class, and sexuality greatly shape the differing experiences of African-Americans.

AADS177001
Gospel Music Workshop
Jacob Dorman, Shannon D
Fall 2023
This class will examine Black gospel music with an emphasis on choral music and oral traditions that capture the Black experience in America from a historical, socio-political and multicultural standpoint. The syllabus and repertoire is reflective of the great faith tradition that is an integral part of black culture; in that it includes the breadth of musical expression in the Black worship experience. Students will analyze the importance of Black gospel music and its vital role in shaping global music trends. Spirituals, traditional gospel, contemporary gospel, as well as religious music of the European tradition will be reviewed closely from a historical and musical standpoint. The class will comprise of equal parts lecture and practicum (Voices of Imani Gospel Choir). The latter half compromising of the practicum (VOI) will help students engage in practical learning of songs explored in the lecture, consequently accomplishing the age-old institution of oral tradition in Black history.

**Credits:** 1

**Room and Schedule:** Lyons Hall 423 TuTh 06:00PM-07:50PM

**Satisfies Core Requirement:** None

**Prerequisites:** All students are welcome regardless of music theory/reading skills, vocal skills and religious/cultural background. Students can take the course for credit one semester, and this will require joining the Voices of Imani Gospel Choir for that semester...

**Corequisites:** None

AADS216201

Muslim Africa

Semley, Lorelle

Fall 2023
Fulfills the LAMA Requirement for the History Major and Minor. The world watched in wonder at the Moroccan soccer teams improbable run during the 2022 World Cup, not fully understanding how one country inspired African, Arab, and Amazigh (indigenous North African) communities alike. Trade networks, cultural exchange, racial ideologies, European colonialism, gendered practices, and recent Islamist political movements have been part of historical processes of religious change touching the entire African continent. Historical sources including eyewitness accounts, memoir, fiction, film, and works by African scholars and artists show how the history of Islam is one part of Africa's long global history.

Black Popular Culture
Kizito, Kalemba
Fall 2023
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In this class, we will critically examine the development of black popular culture from blackface minstrelsy in the 1800s to present day. While we will primarily focus on black popular culture in the United States, we will also consider the work of diasporic authors and artists and the international implications of American media. Readings will draw upon theories and concepts in media studies, cultural studies, and rhetoric to center our discussion of black popular cultural texts such as television shows, films, music, poetry, and fashion.

AADS219901
Introduction to Caribbean Writers
DEPT
Fall 2023
The Caribbean, merely viewed through the lens of colonial history, often does not reflect the
diversity and complexity of the region. From a colonial perspective, therefore, the Caribbean is
both "known" and "unknown." Our work for this course compares and contrasts versions of the
region by examining colonial histories and current literary traditions. We will pay particular
attention to the ways oppositional cultures and identifies manifest in Caribbean literature.
Themes of this course include: colonialism, History/histories, gender, geography ation, sexuality,
class, and culture. Varied texts and media will assist in our interpretations of the Caribbean and
its diaspora.

Music and Social Justice
Jacob Dorman, Shannon D
Fall 2023
This course examines influential musicians and their artistic endeavors towards the path of social justice, education and awareness, with a special focus on African American musicians and their contribution to the world of entertainment. Emphasis will also be on social movements, activism, industry commodity and the direct correlation between music and society. Students will be encouraged to analyze music through lyrics, and song form; while understanding the historical, political and social climates surrounding these artistic ventures. The conclusive expectation of this class is that students understand the significant impact of music on a global scale and be mindful that it is a powerful tool that can be utilized to educate, inspire, create awareness and unite humanity.

Women in Blues
Jacob Dorman, Shannon D
Fall 2023
This course explores women in music from Vaudeville blues of the late 1800's, blues queens of the 1920's through contemporary blues artists such as Shamekia Copeland, Adele, Beyonce and Nicki Minaj. We will have mindful and empathetic conversations based on culture, race and perspective. The outcome of this class is that students have a thorough understanding of the legacy of blues music, the women who were at the forefront of the genre and the impact of blues on a worldwide audience.

African Politics
Woldegebriel, Mesfin
Fall 2023
The course on African politics is designed to introduce the study of contemporary African politics and government. It addresses some critical stages in African politics, including the legacies of colonial rule, reasons for state weakness in post-independence, and the causes of political violence in several countries. It investigates reasons for political reform, democratic consolidation, and peace development. It examines the failures and successes of African countries in achieving sustainable economic development and the influence of international forces in African politics. It surveys social and political factors such as nationalism, ideology, identity politics, and state and non-state actors in African politics.

From Slave Patrol to the War on Crime: Policing Blacks Across American History
Summers, Martin A
Fall 2023
During the "racial reckoning" in the summer of 2020, Americans engaged in a lot of discussions about race and the criminal justice system - and especially policing and its historical connections to slavery. While containing some truth, this particular framing of policing obscures a more complex history. This course will explore the larger history of policing Black Americans, from slavery to the early twenty-first century. Topics will include: race and policing in the antebellum period; legal and extralegal forms of policing Blacks in the Jim Crow era; mass incarceration in the late-twentieth century; and activism against the carceral state.

Food Justice Across the African Diaspora
Best, Latrica E
Fall 2023
This course is designed to introduce students to the social, political and cultural meanings of food across the African Diaspora. We will cover not only the meaning of food but also the importance of race in key aspects of global food systems, from food production and processing to the distribution and consumption of food. This course will also explore food access and security and the ways in which intersecting identities make meaning, experience, and respond to such issues. By the end of this course, students will be able to apply relevant frameworks, namely environmental justice, to food-related dilemmas globally.

**History of Medicine and Public Health/Afr Am Diaspora**  
**Summers, Martin A**  
**Fall 2023**  
This course is a comparative study of the complex historical interplay of medicine, ideas of racial difference, and relationships of power in the African diaspora. Through an examination of slavery in the Americas, colonialism in Africa, and race relations in postemancipation United States and Caribbean, this course explores the ways in which racial difference has acquired a particular truth through the production of biomedical knowledge and its deployment in therapeutic practice and public health policy. The course will also examine how people of African descent have used medical knowledge and healing practices to contest their subordinate position in racist societies.

Seminar: Black Feminist Literature, Art, and Performance, 1970s-1990s
Jones, Jovonna
Fall 2023
Seminar: Black Feminist Literature, Art, and Performance, 1970s-1990s
In this course, we will explore Black feminism and its emergence as a cultural field from the 1970s through the 90s. Black feminism began in the 1970s as a movement that centered the lived experiences, political visions, and intellectual ideas of Black women who didnt see themselves as fully accounted for in mainstream civil rights and women's rights movements. The Black feminist movement birthed a generation of writers and artists who foregrounded Black womens stories and audiences paid attention to their voices like never before. Authors and artists in this course may include The Combahee River Collective, Ntozake Shange, bell hooks, Toni Morrison, Faith Ringgold, Michele Wallace, Audre Lorde, Alice Walker, Kathleen Collins, Howardena Pindell, Julie Dash, Joan Morgan, and more. For English majors, the course satisfies the Seminar requirement and the Race, Blackness, and Language requirement.

African and African Diaspora Studies Courses: Spring 2024

AADS111001
Introduction to African Diaspora Studies
Semley, Lorelle
Spring 2024
A survey of the African continent and the Diaspora that would include geography, history, politics, economics and literature. The purpose of the course is to introduce students to specific historical, cultural, social and political topics related to Africa and the African Diaspora. Because the scope of the course is so vast, we will explore important issues and themes to give students a desire to further pursue more specific classes in African and African Diaspora Studies. Boston College faculty members will be invited to lecture in their area of expertise specific to Africa and the Diaspora throughout the semester.

**AADS111401**  
**When Gods Begin Again: Intro to African and African Diaspora Religions**  
**McElwaine, Michelle L**  
**Spring 2024**  
This introductory course examines Indigenous African and African Diaspora religions from an interdisciplinary perspective. We explore Yorùbá and other African religions, along with African Christianity, Islam, Haitian Vodou, Cuban Santería, Brazilian Candomblé, Sango Baptist of Trinidad and Tobago, Rastafari and Obeah of Jamaica, Black American conjure, and Oyotunji Village. Important themes of religions in Africa and the Afro-Atlantic Diaspora are addressed, such as: the veneration of God(s), Spirit(s), Ancestors, and the natural world; divination, initiation, sacred space, and healing; the impact of slavery on conversion and continuity; fetish as a colonial construct; globalization, race, gender, and power. Ultimately, this course encourages students to reevaluate their understanding of Africana religions, recognize diverse cultural practices and ritual knowledge systems, and engage with oral, written and audio/visual texts that underscore the values of these traditions.

**Introduction to African-American Society**

*McGuffey, Clifton S*

**Spring 2024**

To get Sociology credit for the major or minor (or social science core credit), you must register for SOCY1043 rather than cross-listed course. In 1896, distinguished scholar W.E.B. DuBois became convinced that the experience of Africans in the Americas was so distinctive that it was imperative to study Black people in order to understand power dynamics at all levels of society. This course will study those power dynamics. While paying particular attention to the many ways that racial power dynamics have impacted all people of African descent in the United States, this course does not assume a uniform Black experience. We shall see that gender, class, and sexuality greatly shape the differing experiences of African-Americans.

Gospel Music Workshop
Jacob Dorman, Shannon D
Spring 2024
This class will examine Black gospel music with an emphasis on choral music and oral traditions that capture the Black experience in America from a historical, socio-political and multicultural standpoint. The syllabus and repertoire is reflective of the great faith tradition that is an integral part of black culture; in that it includes the breadth of musical expression in the Black worship experience. Students will analyze the importance of Black gospel music and its vital role in shaping global music trends. Spirituals, traditional gospel, contemporary gospel, as well as religious music of the European tradition will be reviewed closely from a historical and musical standpoint. The class will comprise of equal parts lecture and practicum (Voices of Imani Gospel Choir). The latter half compromising of the practicum (VOI) will help students engage in practical learning of songs explored in the lecture, consequently accomplishing the age-old institution of oral tradition in Black history.

Identity, Culture, and Conflict Resolution Practices in Africa
Woldegebriel, Mesfin
Spring 2024
The course introduces conflict resolution practices in Africa. It examines the causes of conflicts, the types of disputes, the political economy, the actors, and their relationships to identity and cultural differences. It explores conceptions of identity and cultural differences in Africa, traditional approaches to conflict resolution and modern peace management and resolution techniques, transitional justice, and post-conflict reconstruction. It examines several theories of peace and conflict and case studies from all regions of Africa to develop original insights for the students. Ultimately, students not only understand the causes of conflict and conflict resolution approaches in Africa are not homogenous to all countries but should also explain the conflicts in their way.

Africa in International Politics
Woldegebriel, Mesfin
Spring 2024

This course is an introduction to the international relations of post-colonial Africa. It includes the global politics of pre-colonial Africa, the dynamics of colonialism, and the international relations of de-colonization as background topics. Moreover, the course will examine the politics of post-independence international alignments, the external causes and effects of authoritarian rule, and Africa's role in the global political economy. It concludes by reviewing pressing issues, such as state failure, the "war on terror", China's growing economic and political footprint, and African multilateralism. Students will understand the patterns of international relations in post-colonial Africa and explain and critically weigh available evidence using a range of theories to build their original insights.

Black and Popular: Speculative Fictions by Black Writers
Frederick, Rhonda
Spring 2024
This course asks: what do discussions of contemporary social issues look like when depicted in popular literatures written by writers of African descent? What is the benefit of fictionalizing these issues in genre literatures? Students address these questions by examining the forms of "speculative fictions" (specifically thriller, science fiction/fantasy, and mystery/detective) as well as urban romance to determine how each represents concerns of twentieth/twenty-first century black peoples in the U.S., Canada, Jamaica, and Martinique. Our focus on these genres' explorations of race, class, culture, incest, social engineering, and intimate relationships is complemented by socio-historical studies of these issues and countries.

**Theories of Culture and Identity**  
**Kizito, Kalemba**  
**Spring 2024**  
Difference is a fact of the human condition. What do we learn about ourselves and Others in relational encounters marked by difference? Differences can divide communities, societies, countries and perpetuate violence and suffering. Yet, if faced with courage, integrity, and inquiry, these same differences can lead to authentic connections that benefit individuals and their societies. Effective communication requires study and practice, intense intellectual focus, and genuine emotional exploration. **Satisfies the required theory course in the Communication major**

**Critical Race Theory and Literature: The Power of Narratives and Counter Storytelling**

**DeRosa, Marla C**

**Spring 2024**

Critical Race Theory scholarship is grounded in and privileges the sense of reality that reflects the distinctive experiences of people of color. Critical Race Theory scholar Edward Taylor notes that "CRT scholars often use storytelling, narrative, autobiography, and parable as a way to expose and challenge social constructions of race. It makes use of the experience of people negatively affected by racism as a central, validating data point. CRT thus embraces this subjectivity of perspective and openly acknowledges that perceptions of truth, fairness and justice reflect the mindset of the knower (2009, p. 8.) Starting from this premise about the power of narratives, this course will examine the ways in which literary studies have informed Critical Race Theory and the ways that Critical Race Theory can deepen our understanding of literary texts. The course will provide an overview of the writings and scholars in the field of CRT such as Derrick Bell, Patricia Hill Collins, Kimberle Crenshaw and Richard Delgado. The course will also use CRT as a theoretical framework to analyze and broaden our understanding of texts by authors such as Toni Morrison, Colson Whitehead, Octavia Butler, Claudia Rankine and Clint Smith.

AADS422801
The Dynamics of West African Politics
Ngimbous, Jacques M
Spring 2024
What are the causes behind the military coups that took place in four West African countries within the past three years? Why have elections not been successful in granting legitimacy to several Sahelian nations? Is there a correlation between institutional weaknesses, trends in collective identities, and strategies used by interest groups that have triggered political violence? This course aims to analyze and propose plausible answers to these questions. The purpose is to provide a framework that could assist in comprehending the political sociology of Francophone West Africa and aid in the pursuit of stable states. This main focus is on the domestic politics of Francophone countries in West Africa from a comparative perspective. Various topics that will be examined include: 'ethnic violence', 'political crises', 'spiritual insecurity', 'hybrid political esotericism', 'military coups', 'contested elections' and 'endemic corruption--all of which are prominent issues within the West African political sphere. International actors, factors, organizations, and parameters are considered only insofar as they are relevant to local politics and are crucial for the understanding of the primary political dynamics of West Africa.

Racialized Medicine
Best, Latricia E
Spring 2024
This course is designed to introduce students to sociological and other interdisciplinary approaches to how race and racism are defined, employed, and contextualized in health and medicine. Though we will cover an array of theoretical perspectives regarding race and its impact on health, the core theoretical underpinnings of this course are rooted in the racialization process. The contemporary readings address four themes: theoretical and methodological perspectives of race, racism, and health, social processes and the racialization of health, health inequities across the life course, and institutional pursuits of health equity. We examine the importance of intersecting identities throughout the course.

Contemporary World Literatures
Seshadri, Kalpana R
Spring 2024
This course opens a wealth of contemporary literature from the non-Western world mainly Africa, the Middle East, and South Asia that have expanded readers imaginations and enriched the English language in a variety of genres. We shall read fiction and non-fiction alongside cultural theory to deepen our understanding of the political, economic, and environmental issues that arise in these lands and the ways in which they impact the daily lives of people as delineated by some of the worlds most acclaimed authors. Readings may include works by Adhaf Souief (Egypt), Hisham Matar (Libya), Leila Aboulela (Sudan), Xiaolu Guo (China), Amitav Ghosh (India), Romesh Gunesekera (Sri Lanka), Mohsin Hamid (Pakistan), Samrat Upadhyay (Nepal), and others.

**Visual Culture in Black America: The Art and Politics of Seeing and Being Seen**

Jones, Jovonna

**Spring 2024**
This course fulfills the Race, Blackness, and Language requirement for English majors. In this course, we will examine the significance of visual culture for Black America, thinking critically about the art and politics of seeing and being seen. Well keep in mind the following questions: what does it mean to see blackness? How do images function as tools of empowerment and disempowerment, or representation and misrepresentation? What role does visual media play in Black life and imagination? Photography will be central to the study of visibility, but well also consider what role other media play in the production of blackness as a visual phenomenon: literature, performance, and music videos. Authors and artists may include Frederick Douglass, Sojourner Truth, Ida B. Wells, W.E.B. Du Bois, Josephine Baker, Gordon Parks, Spike Lee, Hype Williams, Melina Matsoukas, Claudia Rankine, and LaToya Ruby Frazier. Assignments will include weekly discussion posts on readings and images featured in the course, and one creative project that may take the form of a photo-essay, critical paper, or video related to Black visual culture.

Capstone: Growing Up Ethnic in America
Sarr, Akua
Spring 2024
Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. In this seminar students will read writing that depicts a variety of experiences but suggest that what constitutes an American identity is far from settled. Ethnic difference has a profound effect on personal and social understandings of what it means to be an American. As we discuss the literature, students will be expected to share their own personal narratives of growing up stories of race, ethnicity, class, gender, faith, and nationality and what it means to be American. Some of the writers we will read include: Jhumpa Lahiri, Amy Tan, Louise Erdrich, Chang Rae-Lee, Sherman Alexie, Sandra Cisneros, Junot Diaz, Edwidge Danticat, Mat Johnson and Ta-Nehisi Coates.

**Racism, Colonialism, and Urban Space**

**Kent-Stoll, Peter R**

**Spring 2024**

Drawing on approaches from Black studies, Indigenous studies, sociology, geography, and history, this course examines the historical and contemporary entanglements of racism, colonialism, and urban space. We will focus on understanding how intersecting racisms and colonialisms impinge upon the geographies and lives of African diasporic populations. We will examine both the institutions, cultures, politics, and economies integral to the racialization and colonization of urban space and the social movements and geographies that resist them. Some of the core themes and topics include residential segregation, racial capitalism, Black geographies and space-making, Blackness and Indigeneity, settler colonialism, neocolonialism, and gentrification.

AADS660001
Senior Seminar: Theorizing the Diaspora
Adkins, Amey
Spring 2024
This course explores the discourses of diaspora by taking into account the origins, various meanings, multiple dimensions, cultural iterations, and restrictive limitations of the term. How does "the practice of diaspora" translate in different forms of cultural work such as music, film, and literature? How has diaspora shifted in the age of globalization? How can we use diaspora as an analytical tool for reading from a critical perspective? We will consider closely how diaspora is theorized, practiced, and represented in various forms of cultural production. Therefore we will be taking an interdisciplinary approach reading across genre, medium, and disciplines.

Early American Art
Anderson, Asher
Summer 2023
In this course we will look at art and visual culture made in what is now the United States from ancient times to around 1800. We will consider visual material representing diverse experiences, including Native American art before and after contact with Europeans; depictions of early European settlements; and art, architecture, and material culture from the colonial, Revolutionary, and early national periods. Throughout, we will ask what it means to be American both in the past and in our own time. As much as possible, both independently and as a group, we will study works of art in person at the Museum of Fine Arts, Boston, the Peabody Essex Museum, and elsewhere.

Henry, Brodie; Serafinellie, Guendaline; Williams, Shannon
Summer 2023
Spanish Art History: From Al-Andalus to Picasso
Henry, Brodie; Pelaez, Ana
Summer 2023
This course offers students a visual journey through the history of Spanish art, through the study and analysis of some of the most important works and artists, from the Islamic Art in Al-Andalus during the Middle Ages to present-day works. In each of the major eras, focus will be placed on the most outstanding artistic movements, especially on the painters that have played an essential role in bringing universal recognition to Spanish art. The course will be divided into two components—a theoretical and a practical part. The latter will be taught in the form of lectures offered at the classroom, and the former will consist of virtual cultural study activities, which will include virtual visits to some of the main monuments of the city of Toledo (Gothic Cathedral, Mosque of Bab-al Mardum, and the Toledo Synagogue) and Málaga (Picasso and Pompidou Museums); study of specific works of art at the National Archeological, Prado, Reina Sofia, Sorolla, and the Thyseen museum.

Artistic and Ritual Response to Suffering: Buddhism in Practice
Campbell, Aurelia
Fall 2023
This is an Enduring Question course and is open to FRESHMAN only. You must also register for the accompanying THEO1725 Relics, icons, and images were essential components in the practice of Buddhism across Asian cultures. What constituted these sacred artifacts and how were they used? In this course, students will investigate the various ways in which Buddhism was lived out in different times and places through ritual devotion. We will pay particular attention to how material objects responded to fundamental concerns about human suffering, death, and the afterlife. Specific topics to be addressed include the cult of relics, the use of images in visualization, miracle-performing icons, and the relationship between text and image. Students will be trained in various art historical methodologies and will deepen their understanding of one aspect of Buddhist art through an individual research project.

ARTH225701
Nineteenth Century Art
Wunsch, Oliver M
Fall 2023
An introduction to European and American art of the late eighteenth century to 1900. We will investigate the connections between art and contemporary developments, from the Industrial Revolution to globalization. The course will cover such artistic movements as Neoclassicism, Romanticism, Realism, Impressionism, and Post-Impressionism. Artists will include David, Goya, Turner, Monet, Van Gogh, and Rodin. We will look at their materials and techniques, and we will consider how they represented the issues animating their time: gender, race, class, technology, and power.

ARTH225801
Modernism and the Avant-Garde, 1900-1945
Lotery, Kevin
Fall 2023
In this introductory course we will unpack some of the crucial episodes in art of the first half of the twentieth century, including Italian Futurism, international Dada, Surrealism, De Stijl, the Harlem Renaissance, and Mexican Muralism. We will explore how these avant-garde formations sought to break down the barrier between the making of art and the making of life itself, inventing ways of sliding art into the everyday lives of people on the street, at home, and in the factory. Why, these artists ask again and again, must art be siloed in privileged gallery spaces that uphold repressive models of gender, class, and race? What new utopian futures are opened up when these spaces are negated or left behind?

ARTH227401
Buddhist Arts of Asia
Campbell, Aurelia
Fall 2023
In the early centuries AD, Buddhism spread eastward from its origins in India across Central Asia to China, Korea, and Japan. As it spread, it profoundly impacted the visual cultures of these regions. Students in this course will be introduced to the major styles and types of Buddhist art and architecture, as well as to the fundamental role it played in religious practice. Topics to be explored include the origins of the anthropomorphic Buddha image, pictorial narratives of the Buddha's life, the sacred architecture of mandalas, and visual representations of hells and paradises. Students will also deepen their knowledge about one aspect of Buddhist art or architecture through an in-depth research project on a well-conceived topic.

ARTh301001
Introduction to Contemporary Art
Lottery, Kevin
Fall 2023
This course traces art since roughly 1975, focusing primarily on Europe and the Americas in a global context. Rather than a strict survey, it looks closely at the key techniques, ideas, and debates conditioning contemporary art. We begin with postmodernist takes on the "politics of representation" in appropriation-based photographic and video works of the 1980s, situating them in larger discourses of feminist and queer theory, postcolonial thought, and critical race theory. We end with the challenges of our present and near future: ecological crisis, perpetual war, neo-fascist formations, questions of privilege, and the technologization of everyday life. What strategies have artists invented to research, articulate, and intervene in these ongoing emergencies?

ARTH336801
Contemporary Photography
Anderson, Asher
Fall 2023
The course will trace the development of photography from the 1960s--when its status in the art world was fundamentally changed by the rise of conceptualism--to the present. The course will address themes including the relationship between photography and performance art, the culture wars, identity politics, environmental concerns, globalization, digital media, and how photography has been shaped by the art market. Although the course will focus on fine art photography, we will also consider commercial and journalistic work.

ARTh423301
Renaissance Women
Leone, Stephanie; Ross, Sarah
Fall 2023
This course examines the myriad forms of excellence women achieved during the Italian Renaissance (1400-1600). Even as Renaissance women labored as wives, mothers, nuns, and servants, they also created notable works of literature and art; patronized major projects; held jobs in the urban trades; shaped religious belief and practice; and even governed states. We will examine the work that Renaissance women did beyond "women's work," and analyze the conditions that shaped their professional no less than their personal lives. Our evidence encompasses both textual and material artifacts, including extraordinary objects housed at the MFA and other local repositories.

ARTh431401
The Materials of Art and their Conservation
Newman, Richard
Fall 2023
Preservation of a (traditional) work of art requires understanding the materials of which it is made up, their condition, determining a course of treatment, then carrying out a treatment. In this seminar, means by which the materials of art can be understood (historical documents and examination in a conservation lab) will be explored. A major focus will be on how conservators determine the 'state of preservation' that is the desired outcome of a particular treatment (which is rarely how the work of art looked when it was newly created). Other topics are conservation controversies (including cleaning of the Sistine Chapel), 'authenticity' (and authentication) of works of art, and preservation of art that may include highly perishable materials, digital media, or performance. Although some of the subjects are technical, no background in college science is required.

What role do images play in the production of scientific knowledge? This course explores the different ways artists, scientists, and philosophers have answered this question from the Scientific Revolution to the present. We will adopt a broad definition of scientific illustration, looking at examples that range from seventeenth-century paintings of monstrous oddities to twenty-first-century brain scans. Major topics will include the relationship between art and science, the aesthetics of the diagram, the concept of visual objectivity, and the history of data visualization. We will examine the use and abuse of images in scientific rhetoric, from the visual foundations of scientific racism to contemporary depictions of climate change. Through historical case studies, students will learn how aesthetic conventions and design innovations have been used to manipulate information. By the end of the semester, students will have the ability to interpret images with a more discerning eye, critically analyzing how knowledge is constructed through representation.

The Art Museum: History, Philosophy, and Practice
Netzer, Nancy D
Fall 2023
A study of the emergence of museums tracing their development from private collections of the classical and medieval periods to their present form as public institutions. Topics include: the museum's function in its social context; the role of museums in creating culture; how practices of visual and material culture are linked to constructing meaning; the constituency of museums and their educational mission; philosophy of installation and care of collections. The course will meet in the McMullen Museum; field trips to local museums.

Art History Courses: Spring 2024

ARHT110101
Art: Prehistoric to Middle Ages
Bulger, Monica K
Spring 2024
A fundamental course for understanding the visual arts in the Western World: painting, sculpture, and architecture. Major monuments in the history of art will be discussed in historical and cultural context beginning with Paleolithic cave art through the art of the medieval period. This course will examine some of the ancient material from an archaeological perspective, but its main emphasis will be on style and meaning in art. Assignments will include museum visits and the study of significant works of art in Greater Boston.

ARTH220501
Early American Art
Anderson, Asher
Spring 2024
In this course we will look at art and visual culture made in what is now the United States from ancient times to around 1800. We will consider visual material representing diverse experiences, including Native American art before and after contact with Europeans; depictions of early European settlements; and art, architecture, and material culture from the colonial, Revolutionary, and early national periods. Throughout, we will ask what it means to be American both in the past and in our own time. As much as possible, both independently and as a group, we will study works of art in person at the Museum of Fine Arts, Boston, the Peabody Essex Museum, and elsewhere.

ARTH220601
Art and Myth in Ancient Greece
Hoffman, Gail L
Spring 2024
An introduction to the visual representation of the Greek gods and goddesses and to the artistic depiction of the primary cycles of Greek legends (e.g., the Trojan War and heroes such as Herakles, Perseus, and Theseus). This course focuses on how specific visual attributes serve to identify mythological characters and how the development of narrative in Greek art helped to relate their stories. Inquiring into the use of mythological imagery to decorate temples, cult statues, and vases used primarily for the symposium (male drinking parties), we will consider the functions of mythological imagery within Greek society.

ARTH221201
East Asian Art and Architecture
Campbell, Aurelia
Spring 2024
This course surveys the visual and material culture of China, Korea, and Japan from Neolithic to present times. We will address a wide range of topics, including ancient tombs, Buddhist icons, landscape paintings, imperial palaces, tea culture, and contemporary art. Particular attention will be paid not only to the physical forms of these objects and buildings, but also to their makers, users, and audiences, as well their historical, religious, and social functions. Students will be introduced to various art historical methodologies and will deepen their knowledge about one aspect of East Asian art and architectural history through a substantial research project.

**ARTH222101**

**Introduction to Medieval Art**

**Lansdowne, John C**

**Spring 2024**

This course surveys major themes in the art of Europe, Africa, and the Middle East, from the Late Roman Empire to 1300. Students will encounter objects and images representative of the many varied cultures and peoples geographically and chronologically bound together in the Middle Ages from famed imperial capitals to merchant emporia to trade routes traversing the Mediterranean, the Sahara, the North Atlantic, and beyond. An overarching theme is the political function of art and its role in the cult-religious practices of different belief systems. In many cases, students will follow the lives of objects and images across time and space and explore how their meanings change when brought into different cultural or ideological contexts. The course combines lectures on specific societal contexts with workshops dedicated to mediums, materials, and singular art objects, including visits to Boston-area museums.

**Credits:** 3

**Room and Schedule:** Devlin Hall 10 TuTh 10:30AM-11:45AM

ARTH222301  
Ancient Egyptian Art and Its Afterlife  
Lansdowne, John C  
Spring 2024
A survey of the art, architecture, and archaeology of the ancient Nile Valley, and the long afterlife of this material in ancient, medieval, and modern times. The course introduces major monuments and developments in Egyptian art and architecture from ca. 5000 BCE onward, encompassing the many cultures and kingdoms of the Pre-Dynastic and Dynastic Periods, Hellenistic and Roman Egypt, and the advents of Coptic Christianity and Islam. Also included is the art of Nubia and the Kingdom of Kush as well as connections between the Nile Valley and ancient cultures in Ethiopia, Mesopotamia, and the wider Near East. Students will examine buildings and works of art within the historical and religio-cultural contexts of their creations, and trace the reception, adaptation, and despoliation of ancient Egypt over millennia, culminating in nineteenth- and twentieth-century archaeological excavations and contemporary debates over cultural property and restitution.

Modern Architecture  
Orwig, Timothy T  
Spring 2024  
This course is an overview of the history of architecture in the Modern era, from its eighteenth- and nineteenth-century roots until the present day. Students will examine architecture, urban design, landscape design, and other allied fields such as art history, interior design, and engineering. The course will consider vernacular and commercial design as well as the roles of architects, artists, and patrons. Important issues include the effects of the Industrial Revolution and the rise of the skyscraper, national and international stylistic trends and movements, manufacturers, international exhibitions, and public and critical reaction. Satisfies Core requirement for Arts.

ARTH226201
The City of Rome
Polt, Christopher B
Spring 2024
What was a normal day like for ancient Romans? What did they see, hear, and do while going about their lives? How did those things change as Rome shifted from a Republic to an Empire and as their city became caput mundi ("Head of the World")? In this course we will reconstruct the lived experiences of Romans by examining Rome's urban spaces through art, architecture, artifacts, and texts. Along the way, we will explore: public buildings, mundane and monumental; recreation (baths, theaters, arenas); civic infrastructure (aqueducts, sewers, roads); economy and commerce (shopping, harbors, slavery); gender and sexuality (domestic spaces, brothels); religion (temples, sacrifices, funerals); and other topics as appropriate.

This course examines the history of buildings, landscapes, and urban growth in the United States, from early Native American and European contact to the present. Themes studied include typology, materials and technology, style and movements, the emergence of the architectural profession, and specific social contexts such as culture, gender, race, class, and ethnicity. Students will examine how the built environment is linked to climate, geography, and imaginations of the natural world, and influenced by politics, religion, economy, internationalism, and the definition of national and regional identity. Finally, because of the important role of Boston in American architectural history, the course will use Boston as a lens to understand American architectural history. Satisfies Core requirement for Arts.

ARTH232401
A History of Color
Wunsch, Oliver M
Spring 2024
Color is a fact of nature, but its making and meaning have changed dramatically over time. In this course, we will track the history of color over a five-hundred-year period, from the Renaissance to the present. Though we will focus on Europe and America, one of the recurring themes of the course will be the inseparability of color from globalization, colonialism, and imperialism. Artists such as Titian, Monet, Van Gogh, Amy Sillman, and Anish Kapoor will serve as our points of entry into this history, and we will situate their work within the scientific, philosophical, and social contexts that gave their use of color its meaning. Along the way, we will consider how entrepreneurs and politicians have exploited color for their own purposes, from the commodification of proprietary pigments to the weaponization of color as an instrument of racial prejudice. Lectures will alternate between thematic overviews of major topics in color history and in-depth case studies of specific colors. In-class projects will incorporate hands-on exploration of color through pigment grinding exercises and optical experiments. Writing projects will force us to consider how color resists linguistic description, opening a broader conversation about the relationship between visual and verbal communication.

**Artists and their Writings**  
**Kearney, Anne D**  
**Spring 2024**
Conducted in French. In this course, students will study French culture through some key artists of the turn of the nineteenth century. The course will explore the rapport between their visual work, their writings (or writings about them) and their lives. The artists studied will be Van Gogh, Gauguin, Matisse, Picasso, Rodin, Camille Claudel, Cézanne. We will look at the evolution of their work in conjunction with their biographies, reading extracts from their letters or pronouncements on art and life.

ARTH301101
Exhibitions as Form
Lottery, Kevin
Spring 2024
This course traces the history of exhibition design and installation in modern and contemporary art. We will investigate what happens when artists forego the production of discrete art objects in order to investigate the conditions of display, curation, or participation. A major problem will be formulating ways of discussing artistic environments that make the experience of the viewer-immersed in sometimes bewildering, disorienting spaces—the subject of art making. What sensory experiences are opened up once the privileged sense of sight is troubled and we must feel our way through space by means of touch, hearing, or smell? And most importantly: Why and to what ends have artists, such as Marcel Duchamp, Niki de Saint Phalle, Yayoi Kusama, or David Hammons found it necessary to decenter, disorient, or unground spectators, making the experience of art uncomfortable, agitating, or unsettling?

After Genghis Khan: Art and Architecture in Iran and Central Asia
Fetvaci, Emine F
Spring 2024
This course will examine the Mongol invasions of the thirteenth century and their effects on artistic production in Iran and Central Asia up to the early sixteenth century. Students will learn about the art and architecture of the Ilkhanid and Timurid dynasties, two of the most innovative and dynamic artistic traditions of the Islamic world, and heirs to the traditions of Genghis Khan's Mongol Empire. We will explore the use of art and architecture in the promotion of ideology and empire formation, cultural exchange across the Asian continent, the interaction between nomadic and sedentary populations and the merging of Turko-Mongolian and Persian cultural identities.

ARTH333201
Italian High Renaissance Art
Leone, Stephanie
Spring 2024
The course studies the High Renaissance, of brief duration (1500-1520), but whose artists, Leonardo, Michelangelo, and Raphael, attained a level of creative accomplishment that served as a model for years to come. We explore the development of style, artistic rivalry, relationships between patrons and artists, the creation of Renaissance Rome, and competing artistic developments in Venice. This year, we focus especially on Leonardo in celebration of the 500th anniversary of his death. We also trace the development of art after Raphael's death in 1520, to understand how artists reacted to the challenge of the High Renaissance.

**ARTH334201**  
**Age of Rembrandt in a Global Context**  
**Golahny, Amy**  
**Spring 2024**  
Rembrandt's art defines much of the Golden Age, the seventeenth century in the Dutch Republic, often associated with sumptuous and glowing imagery of luxury goods. But as we examine the Golden Age and Rembrandt in the context of the international arena of trade and colonialization, we may find that the age was not quite so golden. As the Dutch and other European nations explored Asia and the Americas, they exploited the indigenous populations and natural resources. At the same time, foreigners in Amsterdam were regarded by Rembrandt and other artists as exotic, picturesque, and intriguing. This course examines Dutch art with respect to the global forces that shaped it, both in Holland and the rest of the world. At least one visit to the Museum of Fine Arts is required.

**Credits:** 3  
**Room and Schedule:** Devlin Hall 018 MW 03:00PM-04:15PM

This course explores a diverse range of architecture in China, Japan, and Korea from ancient to contemporary times. We will investigate the major architectural types in East Asia—including cities, temples, palaces, gardens, and houses—as well as individual monuments, such as Japan's Himeji Castle and the "Bird's Nest" Olympic stadium in Beijing. In addition to examining the architectural histories of these sites, we will discuss thematic uses related to design, space, landscape, ritual, memory, and modernity. Students will also develop a deepened understanding of one aspect of East Asian architectural history through an in-depth research project on a well-conceived topic.

After decades of constant change in photography's use and technology, at the turn of the twentieth century photographers began exploring the defining conditions of their quintessentially modern medium. Photography came into its own in the years that followed, as it became a primary medium of mass-communication and solidified its place among the fine arts. This course will trace the intertwined iterations of modernism in photography, focusing on European and American art movements. We will look at photographers including Alexander Rodchenko, László Moholy-Nagy, Alfred Stieglitz, Imogen Cunningham, Edward Weston, and Ansel Adams, and read both theoretical texts and artists' own writing about photography.

Biology Courses: Summer 2023

BIOL201001
Ecology and Evolution
Olins, Heather C
Summer 2023
Foundational course required for Biology majors with a focus on the ecology and resilience of living systems across all levels of spatial scales. Topics introduced in this course include evolution, population dynamics, behavioral ecology, ecosystems, co-evolution, and human ecology.

Credits: 3
Room and Schedule: On-line Asynchronous
Satisfies Core Requirement: Natural Science
Prerequisites: None
Corequisites: None
Cross-listed with: None
Frequency: Every Fall, Every Spring
Student Level: Undergraduate
Comments: None
Status: Offered

BIOL201002
Ecology and Evolution
Olins, Heather C
Summer 2023
Foundational course required for Biology majors with a focus on the ecology and resilience of living systems across all levels of spatial scales. Topics introduced in this course include evolution, population dynamics, behavioral ecology, ecosystems, co-evolution, and human ecology.

BIOL220001  
Microbiology for Health Professionals  
Dunn, Mary K  
Summer 2023  
This course is a study of the basic physiological and biochemical activities of bacteria and viruses. Emphasis will be placed on virulence factors and the mechanism by which a variety of microorganisms and viruses establish an infection. The use of anti-viral drugs and antibiotics, the host immune response to microbial infection, and the effectiveness of various vaccination strategies will also be discussed.  

Credits: 3  
Room and Schedule: On-line Asynchronous  
Satisfies Core Requirement: None  
Prerequisites: BIOL1300 or BIOL1300-1320 or BIOL2000 or a college level introductory biology course  
Corequisites: None  
Frequency: Every Fall  
Student Level: Undergraduate

BIOL230001
Biostatistics
DaCosta, Jeffrey M
Summer 2023
This course will introduce biology students to the basic statistical techniques that are used in conducting biological and medical research. The course is divided into four parts: (1) descriptive statistics (averages, variability); (2) probability and probability distributions (basic probability theory and the binomial, poison, and normal distributions); (3) statistical inference (parametric and non-parametric tests); and (4) relationships between variables (simple and multiple regression). Students will become familiar with a standard statistical analysis software package and will critique actual research papers.

BIOL303001
Comparative Vertebrate Physiology
Kenaley, Christopher P
Summer 2023
This course is intended for Biology, Psychology, and Biochemistry majors and students in the pre-medical program seeking a broad overview of human physiology. This course will offer a comprehensive exploration of fundamental life systems with a primary emphasis on human physiology. The chemical and physical processes common to all living organisms, including hemodynamics, respiration, circulation, acid/base regulation, synaptic transmission, kidney and muscle function will be discussed. Also included are related topics on development of the organism and functional aspects of the immune system in host defense strategies.

Credits: 3

BIOL432001
Developmental Biology
Hake, Laura E
Summer 2023
Developmental biology is in the midst of a far-reaching revolution that profoundly affects many related disciplines, including evolutionary biology, morphology, and genetics. The new tools and strategies of molecular biology have begun to link genetics and embryology and to reveal an incredible picture of how cells, tissues, and organisms differentiate and develop. This course describes both organismal and molecular approaches, which lead to a detailed understanding of (1) how it is that cells containing the same genetic complement can reproducibly develop into drastically different tissues and organs, and (2) the basis and role of pattern information in this process.

Credits: 3
Room and Schedule: On-line Asynchronous
Satisfies Core Requirement: None
Prerequisites: BIOL2040 and additional coursework in molecular cell biology (such as BIOL3040, BIOL4140, BIOL4400)

BIOL710101
Readings and Research
DEPT
Summer 2023
Intended for M.S. students who are acquiring a knowledge of the literature and experimental methods associated with their research projects under the guidance of a faculty research advisor. Participation in research group meetings, journal clubs, data clubs, etc., may be required. A maximum of six credits may be earned from this course.

Credits: 3
Room and Schedule: By Arrangement
BIOL991101
Doctoral Continuation
Meyer, Michelle M
Summer 2023
All students who have been admitted to candidacy for the Ph.D. degree are required to register and to pay the fee for doctoral continuation during each semester of their candidacy. Doctoral Continuation requires a commitment of at least 20 hours per week working on the dissertation.

Credits: 0
Room and Schedule: By Arrangement

BIOL110001
General Biology
Annunziato, Anthony T, Phd; Seyfried, Thomas N, Phd
Fall 2023
Designed for non-science majors who desire an introduction to cell and molecular biology, this course is also suggested for students who may be interested in the Biology major but lack sufficient preparation to enroll directly into BIOL 2000. Topics include the chemistry of life; biological membranes; cellular metabolism; cell structure; cell division; DNA replication/RNA transcription; protein synthesis; genetics/evolution. Lectures include discussions of the scientific method and current applications of biological investigations. Note: this course does not fulfill any requirement for the biology major, biochemistry major, or the pre-medical program.

Credits: 3
Room and Schedule: Higgins Hall 300 MWF 11:00AM-11:50AM
Satisfies Core Requirement: Natural Science
Prerequisites: None

BIOL130001
Anatomy and Physiology 1
Mott, Devin
Fall 2023
This course lays the foundation for the understanding of human anatomy and physiology. The first portion of the course covers cellular and molecular aspects of eukaryotic cell function: basic chemistry, macromolecules, cell structure, membrane transport, metabolism, gene expression, cell cycle control, and genetics. The course continues with the study of several organ systems. Beginning with the Integument, which is followed by the Skeletal and Muscular Systems, and ending this first semester with the Nervous System. The cellular and molecular basis for the functions of these systems is an integral element of this portion of the course.

Credits: 3
Room and Schedule: Mcguinn Hall 121 TuTh 08:00AM-09:15AM
Satisfies Core Requirement: None
Prerequisites: None

BIOL148001
Pathogens and Plagues
Dunn, Mary K
Fall 2023
In recent history, never has microbiology been more upfront and more important. As we continue to navigate through the Covid-19 pandemic, it is increasingly important to better understand not only viruses and vaccines, but a broader view of microbes and their impact on society and public health. This course will look at ancient epidemics such as the Plague and TB, the ongoing HIV epidemic and the more recent spillovers leading to outbreaks of Ebola and the current pandemic with Sars2 (Covid-19). In addition to lectures on the biological aspects of microbes and epidemics, classroom discussion will include topics such as rising antibiotic resistance, the anti-vax culture and the intersection of science and politics. This is a discussion-based course and students will participate in a semester-long group research project to be presented to the class. This course satisfies the Natural Science Core and is designed for non-biology majors.

**Credits:** 3  
**Room and Schedule:** Stokes Hall 301N TuTh 09:00AM-10:15AM  
**Satisfies Core Requirement:** Natural Science  
**Prerequisites:** None  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Spring

BIOL204001  
**Investigations in Molecular Cell Biology Lab**  
**Warner, Douglas M**  
**Fall 2023**  
A 3-credit laboratory course designed to introduce students to the core techniques and experimental strategies of modern molecular cell biology within the context of an original research investigation. Students will learn to construct testable hypotheses, design experiments, and critically analyze experimental results. During the course of their investigations, students will gain proficiency in microbial cell culture, molecular cloning, genetic analysis, and molecular characterization. Students will also gain proficiency in scientific communication and the use of biological databases.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 263 TuTh 12:00 Noon-12:50PM

Warner, Douglas M
Fall 2023
A 3-credit laboratory course designed to introduce students to the core techniques and experimental strategies of modern molecular cell biology within the context of an original research investigation. Students will learn to construct testable hypotheses, design experiments, and critically analyze experimental results. During the course of their investigations, students will gain proficiency in microbial cell culture, molecular cloning, genetic analysis, and molecular characterization. Students will also gain proficiency in scientific communication and the use of biological databases.

BIOL230001
Biostatistics
DaCosta, Jeffrey M
Fall 2023
This course will introduce biology students to the basic statistical techniques that are used in conducting biological and medical research. The course is divided into four parts: (1) descriptive statistics (averages, variability); (2) probability and probability distributions (basic probability theory and the binomial, poison, and normal distributions); (3) statistical inference (parametric and non-parametric tests); and (4) relationships between variables (simple and multiple regression). Students will become familiar with a standard statistical analysis software package and will critique actual research papers.

BIOL303001
Comparative Vertebrate Physiology
Kenaley, Christopher P
Fall 2023
This course is intended for Biology, Psychology, and Biochemistry majors and students in the pre-medical program seeking a broad overview of human physiology. This course will offer a comprehensive exploration of fundamental life systems with a primary emphasis on human physiology. The chemical and physical processes common to all living organisms, including hemodynamics, respiration, circulation, acid/base regulation, synaptic transmission, kidney and muscle function will be discussed. Also included are related topics on development of the organism and functional aspects of the immune system in host defense strategies.

Credits: 3
Room and Schedule: Devlin Hall 8 MWF 01:00PM-01:50PM
Satisfies Core Requirement: None

Frequency: Every Fall, Every Spring
BIOL304001
Cell Biology
Burgess, David R
Fall 2023
This course is designed to provide students with a strong foundation in the molecular biology of the cell. Topics covered in the course include cellular biochemistry, regulation of gene expression, subcellular organization, regulation of the cell cycle, membrane trafficking, cell-substrate interactions, cytoskeleton, cancer, and cell signaling. It serves as excellent preparation for more advanced courses in cell biology, molecular biology, developmental biology, and genetics.

**BIOL309001**  
Foundations of Microbiology  
Warner, Douglas M
Fall 2023
In this course we examine the diversity in the microbial world that exists between bacteria, archaea, eukarya, and viruses. We will explore the unique molecular biology, metabolism, and ecological diversity that exists within the three domains of life and, ultimately, discuss how various aspects and members of the microbial world intersect with humanity and human health.

BIOL314001
Experimental Methods in Organismal Biology
Kenaley, Christopher P
Fall 2023
Organismal biology is the study of living systems of all scales that shape the structure, function, ecology, and evolution of individual organisms. Experiments that elucidate how organisms respond to biotic and abiotic environmental stimulus over broad time scales--from changes in behavior to adaptation--are crucial to understanding biological diversity. In this course we'll explore the concepts and analytical tools that frame experimental research in organismal biology. Through group projects and active learning exercises, students will first make hypotheses concerning how organisms respond in time, space, and behavior to changes in environment and then design experiments and instruments that produce data to evaluate these hypotheses. Topics covered will include reconstructing phylogenetic history and the evolution of organismal form and function, evaluating form-function relationships, and the correlates of spatial and temporal distribution of organisms. In addition, the development of an analytical toolbox--specifically, learning the principles of data science and statistical analysis--is a central theme of this course.

Credits: 3
Room and Schedule: Higgins Hall 310 MWF 10:00AM-10:50AM
Satisfies Core Requirement: None
BIOL405001
Evolution and Development
McMenamin, Sarah K
Fall 2023
We see incredible biodiversity on earth, and biologists are now learning how some of this diversity emerges. The field of Evolutionary Development (Evo Devo) asks how development can be modified during evolution to produce the incredible variation observed in Nature. How are animal body plans formed, and how can those plans be changed? How do developmental processes constrain adaptive changes in multicellular organisms? What genetic pathways has evolution targeted to modify phenotypes? The course will address these and other fundamental questions through readings, discussion, and case studies. Students will be introduced to the diversity of multicellular organisms and their evolutionary history, and some of the methods and interpretations of modern developmental, molecular, and evolutionary biology.

BIOL409001
Virology
Eberhard, Jeremy J
Fall 2023
This course will consider eukaryotic DNA and RNA viruses that are important in human disease. Basic principles of virus structure, host cell entry and the molecular biology of virus life cycles will be considered in the context of infectious disease. Viruses to be examined include Influenza, cancer-related viruses such as the Human Papilloma Virus, HIV, and emerging viruses such as Ebola and the hantaviruses. The host immune response to viral infection and the effectiveness of various vaccination strategies will also be discussed.

BIOL412001  
Inflammation and Disease  
Chiles, Thomas; Taghian, Danielle  
Fall 2023  
Inflammation is the body's normal immune response to a variety of injuries. The principal aim of this course is to explore the relationship between the inflammatory response and a host of human diseases, including cardiovascular, autoimmune, musculoskeletal and digestive medical conditions, and cancer. The biology and physiology of acute inflammation, triggers of the immune response, onset of chronic inflammation and the role of chronic inflammation in the development of disease will be discussed using primary literature.

Corequisites: None  
Cross-listed with: None  
Frequency: Annually  
Student Level: Undergraduate
In the midst of widespread global climate change, Earth's biodiversity faces multiple synergistic threats. Climate change, habitat loss, pollution, over extraction, and invasive species threaten all species on Earth including our own. The tools of Ecology can help to understand these threats. Advances in science and modeling enable us to make predictions about future climate and ecosystem conditions, but these predictions have their limitations. Focusing solely on climate models and predictions of future scenarios and biodiversity loss can lead to feelings of hopelessness and desperation. To work towards an equitable, sustainable future for all species on Earth (including Homo sapiens) we need to learn about positive visions for the future, we need to be able to critically assess potential solutions, we need to examine examples of effective solutions, and we need to consider the roles we each can play in bringing about a positive future. In this course we will do these things together. Over the course of the semester, each student will integrate technical scientific literature, a diverse set of views and perspectives on how we interact with the natural world around us, and personal reflection to create an individual plan of action.

Bioinformatics is an emerging field at the intersection of biology, mathematics, and computer science. It harnesses the power and speed of computers to analyze the molecules essential for life. This introductory course requires that students have a basic understanding of molecular biology, genetics, and the Internet, but it does not require extensive background in mathematics or programming. Students will learn bioinformatic tools from the public domain, public databases, and simple programming tasks in PYTHON.

BIOL426001  
**Human Anatomy**  
DiBenedetto, Lynn M  
Fall 2023

In this course, students will explore and compare the form and function of representative members of the five vertebrate classes. Evolutionary similarities and differences in form and function will be investigated, as will both the selective pressures, and non-selective constraints that have contributed to vertebrate structure. The course will conceptually integrate vertebrate anatomy with developmental biology, evolutionary biology, and ecology, and will provide skills valuable to careers in a range of biological disciplines, including molecular cell biology, medicine, evolutionary biology, and ecology.

In this course, students will explore and compare the form and function of representative members of the five vertebrate classes. Evolutionary similarities and differences in form and function will be investigated, as will both the selective pressures, and non-selective constraints that have contributed to vertebrate structure. The course will conceptually integrate vertebrate anatomy with developmental biology, evolutionary biology, and ecology, and will provide skills valuable to careers in a range of biological disciplines, including molecular cell biology, medicine, evolutionary biology, and ecology.

BIOL435001
Biological Chemistry
Dunn, Rebecca K
Fall 2023
This course is designed to introduce biology and biochemistry majors to the subject with an emphasis on understanding the biochemical principals that are crucial to biological function at the molecular, cellular, and organismal levels. The material includes: (1) the structure and chemistry of biomolecules, including amino acids, proteins, lipids, carbohydrates, and nucleic acids; (2) the key metabolic pathways and enzymology involved in the synthesis/degradation of carbohydrates; and (3) the cycling of energy through biological systems. Reference will be made to alterations in biochemical structures, processes, and pathways that relate to specific diseases.

BIOL454001
Neuroscience
Nystuen, Arne M
Fall 2023
This class will cover molecular neuroscience and neuroanatomy in a clinical and pharmaceutical context. Anatomy topics will include the structure, function, and pathology for the brain and associated nerves and vasculature. Sensory and motor systems will be discussed with special attention to the visual system, where genetic disease and current therapeutic strategies will be discussed in depth. We will cover pathology associated with neurodegenerative disease and the current clinical trials within this disease group.

BIOL480201
Research in Evolutionary Genomics
DaCosta, Jeffrey M
Fall 2023
Satisfies the advanced experience requirement for the Biology major. This course will provide hands-on training in the collection and analysis of genome-scale data from non-model organisms. Students will learn good laboratory practices while preparing samples for next-generation DNA sequencing, which will be run in the departments core sequencing facility. Students will also learn basic Linux/Unix computational skills and several bioinformatics tools that will be applied in managing and analyzing the massive amounts of data generated by this sequencing technology. Through data analyses and reviews of the primary literature, students will gain exposure to modern methods in phylogenetics and population genetics. This course is recommended for students interested in advanced topics in genomics, bioinformatics, and evolution. BIOL3150 and BIOL4200 recommended.

BIOL483001  
Research in Molecular Biology Lab  
Fofana, Ismael B  
Fall 2023  
Satisfies the advanced experience requirement for the Biology major. An advanced project laboratory course for hands-on training in the experimental techniques of molecular biology under faculty supervision. In addition to formal lab training and discussions, students will have access to the lab outside class hours to work on projects intended to produce publication quality data. The research project will focus on environmentally-mediated gene expression in the organism Pseudomonas fluorescens. Methods taught include: DNA cloning techniques, DNA sequencing, polymerase chain reaction, and the use national databases for research and analysis. It is ideal for students who desire a solid introduction to hypothesis-driven research in molecular biology through practical training.

Credits: 3  
Room and Schedule: Higgins Hall 570 TuTh 02:00PM-05:00PM
BIOL489001
Investigations in Cellular Re-Programming
Connolly, Timothy J
Fall 2023
Satisfies the advanced experience requirement for the Biology major. Induced pluripotent stem cells, iPSCs, are cells that can be generated from adult cells such as skin fibroblasts. Once generated, iPSCs can be directed to differentiate into any cell and offer exciting models for disease research. This laboratory course will teach students the techniques used to reprogram adult murine fibroblasts into pluripotent stem cells and their subsequent differentiation into cardiac and neuronal lineages. Resulting cell lines will be characterized using molecular and cell biology techniques and students will work to create novel cellular disease models to progress particular disease research.

BIOL501001
Nobel Prize Winning Research in Medicine or Physiology
Burgess, David R
Fall 2023
Satisfies the advanced experience requirement for the Biology major. In this course we will discuss primary research literature in the fields of cell and developmental biology that have led to the award of the Nobel Prize. Each student will select a primary paper cited by the Nobel Foundation as justification for the award together with a supportive current review on the topic and present the background information to the class. The primary paper will be discussed at the following class period, with all students having defined responsibilities for discussion of the figures and data.

Credits: 2
Room and Schedule: Stokes Hall 105S M 03:00PM-04:50PM
BIOL501002
Nobel Prize Winning Research in Medicine or Physiology
Burgess, David R
Fall 2023
Satisfies the advanced experience requirement for the Biology major. BIOL504001
Topics in Developmental Biology
McMenamin, Sarah K
Fall 2023
Satisfies the advanced experience requirement for the Biology major. The field of molecular developmental biology asks: How do molecules and cells coordinate and function to produce organisms? How can these processes be modified in the context of disease and evolutionary change? With the goal of better understanding current research in the field of developmental biology, we will read primary literature focusing on a variety of techniques (molecular, cellular, genetic, biochemical) and numerous systems (tissue culture, mouse, fly, frog, zebrafish, and others). The course will focus on developing students' ability to comprehend and critically evaluate recent primarily literature, present scientific perspectives, and actively participate in scientific dialogue.

**Credits:** 2

**Room and Schedule:** Higgins 416; M 12:00 Noon-02:00PM

**Satisfies Core Requirement:** None

**Prerequisites:** BIOL 2040 and additional coursework in molecular cells biology

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Annually

**Student Level:** Both

**Comments:** None

**Status:** Offered

---

**BIOL513001**

**Environmental Disruptors of Development**

**Hake, Laura E**

**Fall 2023**

Satisfies the advanced experience requirement for the Biology major. More than 100,000 chemicals are manufactured and may end up as environmental pollutants. Some have toxic effects at high concentrations and protection plans are already in place. However, embryonic, fetal or neonatal exposure to low "safe" levels of numerous pollutants can (1) induce subtle changes in developmental programs regulated by steroid hormones; (2) increase the reproductive, immune, metabolic or cognitive disorders and (3) increase the risk of adult-onset disorders (breast cancer, prostrate cancer, diabetes, reduced fertility). This course will examine experiments regarding Environmental Endocrine Disruptors and consider how this work is important in the development of regulatory policy.

**Credits:** 3

**Room and Schedule:** Higgins Hall 225 TuTh 10:30AM-11:45AM

**Satisfies Core Requirement:** None
**Prerequisites:** At least two of the following courses: BIOL3040, BIOL5060, BIOL4170, BIOL4510, BIOL4140, BIOL4350, BIOL4400.

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Every Fall

**Student Level:** Both

**Comments:** None

**Status:** Offered

---

**BIOL520001**

**Glycobiology and Human Disease**

**Wiederschain, Gherman Y**

**Fall 2023**

Satisfies the advanced experience requirement for the Biology major. In this seminar course we will discuss the structures, function, and metabolism (biosynthesis and degradation) of carbohydrate-containing molecules, which are widely distributed in nature. Glycosylation is a major type of posttranslational modification of proteins and lipids, and as a result of such modification these molecules (glycoconjugates) obtained new physical, chemical and biological properties that frequently determine very specific processes in the cells and whole living organisms. Glycoconjugates have important roles in intercellular interactions and adhesion, signaling, the immune response, fertilization, embryogenesis, the action of hormones and receptors, etc. Disorders (often hereditary) in degradation and biosynthesis of glycoconjugates lead to development of very severe diseases, a variety of lysosomal storage diseases (LSD) and congenital disorders of glycosylation (CDG), respectively. For the past two decades, new fields of study termed glycomedicine and glycopharmacology have been developing rapidly.

**Credits:** 2

**Room and Schedule:** Devlin Hall 218 MW 09:00AM-09:50AM

**Satisfies Core Requirement:** None

**Prerequisites:** BIOL2000 Molecules and Cells, BIOL2040 Investigations in Molecular Cell Biology, and additional coursework in cell Biology or biochemistry.

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Annually

**Student Level:** Both

**Comments:** None

**Status:** Offered
BIOL542001
Cancer As A Metabolic Disease
Seyfried, Thomas N, Phd
Fall 2023
Satisfies the advanced experience requirement for the Biology major. This seminar will review evidence showing that impaired cellular energy metabolism is the defining characteristic of nearly all cancers regardless of cellular or tissue origin. In contrast to normal cells, which derive most of their usable energy from oxidative phosphorylation, nearly all cancer cells become dependent on non-oxidative substrate level phosphorylations to meet energy demands. Evidence will be discussed supporting a general hypothesis that all hallmarks of cancer including genomic instability and metastasis can be linked to impaired mitochondrial function. A view of cancer as a metabolic disease will impact approaches to cancer management and prevention.

Credits: 3
Room and Schedule: Higgins Hall 465 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: BIOL2040 and BIOL3040
Corequisites: None

BIOL545001
Advanced Lab in Cell Imaging
Judson, Bret
Fall 2023
This course satisfies the advanced experience requirement for biology majors. This course will survey the various visualization techniques and instruments used by scientists and biomedical researchers: light microscopy, confocal, electron microscopy, super-resolution, and image processing. Students will discuss the experimental use of these techniques and instruments as described in the primary literature. The laboratory component will focus on becoming familiar with the instrumentation that we have available at Boston College. The course will culminate in individual projects of the students choosing utilizing equipment that we have in the laboratory.

Credits: 2
Room and Schedule: Higgins 465;TuTh 04:00PM-06:00PM
BIOL570001
Biology of the Nucleus
Annunziato, Anthony T, Phd
Fall 2023
Satisfies the advanced experience requirement for the Biology major. This course provides an in-depth treatment of the molecular biology of DNA and RNA, with particular emphasis on the control and organization of the genetic material of eukaryotic organisms. Topics include chromatin structure and function, histone modifications, DNA replication, gene activation and silencing, DNA methylation, and RNA interference. Emphasis is on experimental design, and analysis of the primary literature.

BIOL991102
Doctoral Continuation
Meyer, Michelle M
Fall 2023
All students who have been admitted to candidacy for the Ph.D. degree are required to register and to pay the fee for doctoral continuation during each semester of their candidacy. Doctoral Continuation requires a commitment of at least 20 hours per week working on the dissertation.

Biology Courses: Spring 2024

BIOL132001
Anatomy and Physiology 2
Mott, Devin
Spring 2024
This course is a continuation of BIOL1300/1310, with a primary emphasis on the physiology of the major body systems. Systems studied in this course include the sensory, endocrine, cardiovascular, lymphatic, immune, respiratory, digestive, urinary, and reproductive systems. While the physiological functions under normal conditions are emphasized, relevant disease or dysfunctional conditions are also discussed.

**Credits:** 3  
**Room and Schedule:** Fulton Hall 511 (Auditorium) TuTh 07:30AM-08:45AM  
**Satisifies Core Requirement:** None  
**Prerequisites:** None  
**Corequisites:** BIOL1330  
**Cross-listed with:** None

BIOL144001
Sustaining the Biosphere
Hake, Laura E
Spring 2024
Environmental problems and their solutions occur at the intersection of natural systems and the human systems that manipulate the natural world. The course will provide students with an integrated understanding of human systems that affect nature. Topics will include climate, air and water pollution, economics and urbanization, food and agriculture, population growth, biodiversity, waste management and health and toxicology. Sustainability, personal responsibility and a proactive approach to involvement in solutions to current environmental crises will be emphasized. This course is designed for students who are not majoring in biology or biochemistry.

BIOL170601
Understanding and Protecting Our Oceans in the Wake of Global Change
Humphries, Courtney; Offen, Vena; Olins, Heather C
Spring 2024
This is a Complex Problems course and is open to FRESHMEN only. You must also sign up for the accompanying lab BIOL1707 or ENVS1076. The ocean, which covers more than 70 percent of the Earth's surface, is vital to human societies. Yet, we have better maps of Mars than our own seafloor. This course introduces students to what we know and don't know about marine biodiversity and ecosystem services. It then describes the effects of climate change on the ocean—including rising temperatures, acidification, and sea level rise—and the resulting impact on life within and outside of the ocean. We end discussing the importance of effective governance and explore innovative ways in which people are working to repair and protect the ocean.

**Credits:** 3

BIOL200001
Molecules and Cells
Taghian, Danielle
Spring 2024
Foundational course required for Biology majors that introduces students to living systems at the molecular and cellular level of organization. Topics introduced in this course include basic cellular biochemistry, gene regulation, cellular organization and metabolism, and cell signaling and genetics.

Credits: 3
Room and Schedule: Higgins Hall 300 MWF 11:00AM-11:50AM
BIOL200002
Molecules and Cells
Das, Maitreyi
Spring 2024
Foundational course required for Biology majors that introduces students to living systems at the molecular and cellular level of organization. Topics introduced in this course include basic cellular biochemistry, gene regulation, cellular organization and metabolism, and cell signaling and genetics.

Credits: 3
Room and Schedule: Fulton Hall 511 (Auditorium) TuTh 10:30AM-11:45AM

**BIOL204001**  
**Investigations in Molecular Cell Biology Lab**  
**Warner, Douglas M**  
**Spring 2024**  
A 3-credit laboratory course designed to introduce students to the core techniques and experimental strategies of modern molecular cell biology within the context of an original research investigation. Students will learn to construct testable hypotheses, design experiments, and critically analyze experimental results. During the course of their investigations, students will gain proficiency in microbial cell culture, molecular cloning, genetic analysis, and molecular characterization. Students will also gain proficiency in scientific communication and the use of biological databases.

BIOL204007
Investigations in Molecular Cell Biology Lab
Warner, Douglas M
Spring 2024
A 3-credit laboratory course designed to introduce students to the core techniques and experimental strategies of modern molecular cell biology within the context of an original research investigation. Students will learn to construct testable hypotheses, design experiments, and critically analyze experimental results. During the course of their investigations, students will gain proficiency in microbial cell culture, molecular cloning, genetic analysis, and molecular characterization. Students will also gain proficiency in scientific communication and the use of biological databases.

This course is designed to provide students with a strong foundation in the molecular biology of the cell. Topics covered in the course include cellular biochemistry, regulation of gene expression, subcellular organization, regulation of the cell cycle, membrane trafficking, cell-substrate interactions, cytoskeleton, cancer, and cell signaling. It serves as excellent preparation for more advanced courses in cell biology, molecular biology, developmental biology, and genetics.

BIOL330001
Human Physiology
DiBenedetto, Lynn M
Spring 2024
In this course, students will learn to recognize and to apply the basic concepts that govern integrated body functions. We will begin to explore the physiological and cellular processes of the muscular, nervous, respiratory, cardiovascular, renal, gastrointestinal and endocrine systems. In the optional, computer-based laboratory, students will collect data in real-time, and analyze aspects of these systems using EMG, EEG, cardiac electrophysiology and spirometry. The textbook for the course is a mid-level presentation but the lectures are easily accessible for those wanting to gain a general understanding of how the body works.

Credits: 3
Room and Schedule: Higgins Hall 300 MW 03:00PM-04:15PM
Satisfies Core Requirement: None

BIOL403001  
Deep Sea Biology  
Olins, Heather C  
Spring 2024  
Roughly 80% of habitable space on this planet is in the ocean below 1000 meters where sunlight never reaches. In this course we will dive into this rarely visited habitat that occupies the majority of our biosphere. We will take an interdisciplinary approach, as studying the deep requires the integration of geology, chemistry, ecology, physiology, and engineering. We will investigate fundamental aspects of biology such as how organisms adapt to challenges posed by their environment. Students will also gain an appreciation for how much of the planet remains unexplored and learn how scientists study the inaccessible ecosystems of the deep.

Credits: 3  
Room and Schedule: Higgins Hall 263 MW 03:00PM-04:15PM

---

**BIOL414001**  
**Microbiology**  
**Momeni, Babak**  
**Spring 2024**  
This course provides a foundation in molecular cell biology for biology majors, focusing on bacteria, viruses, immunology, and host/microbe relationships. Bacterial structure and function are addressed in terms of physiology, genetics, and biochemistry. Gene expression, replication, and transmission are examined in a variety of eukaryotic viruses. A review of the innate and adaptive phases of the immune response is presented with an emphasis on pathogen recognition, cellular communication, and lymphocyte development. The course concludes with selected topics on pathogenesis, epidemiology, and microbial ecology.

**Credits:** 3  
**Room and Schedule:** Stokes Hall 195S TuTh 09:00AM-10:15AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2000; BIOL2040 is recommended and can be taken concurrently.

In molecular evolution, random events such as pointwise DNA mutations and chromosomal rearrangement events (inversion, reciprocal translocation) create genetic variation in a diploid population that undergoes selection of the fittest to survive. This course describes mathematical models, both deterministic and stochastic, that provide a theoretical foundation for understanding modern genetics. The types of questions we'll address include the following. In a large population, how do haplogype frequencies change both in the presence and absence of selection and restricted migration? What is linkage disequilibrium and how is it measured? In situations of a population bottleneck, caused for instance by limited environmental resources, what is the probability that a particular allele will become fixed in the population, and what is the expected time until fixation? What is the coalescent? In addition, some original research papers will be presented.

**Credits:** 3

**Room and Schedule:** Higgins Hall 310 TuTh 12:00 Noon-01:15PM

**Satisfies Core Requirement:** None

**Prerequisites:** BIOL 3050 OR 3150. Working knowledge of probability and statistics or approval from the instructor.

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Annually

**Student Level:** Undergraduate

**Comments:** None

**Status:** Offered
The increasing knowledge about the metabolic pathways has deepened our understanding of human disease. Using studies from recent research and review articles, we will cover a variety of domains in the first half of the semester. These topics include insulin signaling/resistance, regulation of metabolism by different regulatory pathways and endoplasmic reticulum stress. We will also investigate important regulatory hormones including incretins, leptin and adiponectin and the tissue at the center of obesity, adipose tissue. Based on this foundation, we will focus on metabolic impairments in different human diseases. Specifically, we will be reading from the primary literature and from other relevant sources (e.g., review articles) on metabolic syndrome, pancreas function/dysfunction, type 2 diabetes, type 1 diabetes, gestational diabetes, MODY and obesity. After we complete this section, we will focus on the link between metabolic diseases and other important diseases including cancer and neurological diseases/dysfunction. Lastly, we will study the effects of racism and inequities in society on human health. At the end of the course, the students will develop a deep understanding of basic mechanisms in metabolic disease. This course is based on active teaching/learning principles and the instructor will be the guide on the side, rather than sage on the stage. Thus, the students are expected to actively participate in Discussions in each class.

Credits: 3
Room and Schedule: Higgins Hall 310 TuTh 09:00AM-10:15AM

BIOL432001
Developmental Biology
Hake, Laura E
Spring 2024
Developmental biology is in the midst of a far-reaching revolution that profoundly affects many related disciplines, including evolutionary biology, morphology, and genetics. The new tools and strategies of molecular biology have begun to link genetics and embryology and to reveal an incredible picture of how cells, tissues, and organisms differentiate and develop. This course describes both organismal and molecular approaches, which lead to a detailed understanding of (1) how it is that cells containing the same genetic complement can reproducibly develop into drastically different tissues and organs, and (2) the basis and role of pattern information in this process.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 225 TuTh 10:30AM-11:45AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040 and additional coursework in molecular cell biology (such as BIOL3040, BIOL4140, BIOL4400)

**BIOL435001**  
**Biological Chemistry**  
**Meyer, Michelle M**  
**Spring 2024**  
This course is designed to introduce biology and biochemistry majors to the subject with an emphasis on understanding the biochemical principals that are crucial to biological function at the molecular, cellular, and organismal levels. The material includes: (1) the structure and chemistry of biomolecules, including amino acids, proteins, lipids, carbohydrates, and nucleic acids; (2) the key metabolic pathways and enzymology involved in the synthesis/degradation of carbohydrates; and (3) the cycling of energy through biological systems. Reference will be made to alterations in biochemical structures, processes, and pathways that relate to specific diseases.

**Credits:** 3  
**Room and Schedule:** Mcguinn Hall 121 MWF 10:00AM-10:50AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** CHEM2231 and BIOL2000
BIOL440001
Molecular Biology
Annunziato, Anthony T, Phd
Spring 2024
This course will explore the structure, function, synthesis and interaction of nucleic acids and proteins. The mechanisms involved in maintaining cellular genetic and epigenetic information, and in reading this "code" to generate specific patterns of gene expression, will be studied in detail. Topics include classic and newly-developed techniques for studying macromolecules; biotechnology; the functional organization of chromosomes; protein folding and modifications; DNA replication, repair and supercoiling; RNA synthesis and processing; translation and the levels of gene regulation. Literature from the foundational investigations that led to our understanding of these processes and the current research in these areas will be presented.

Credits: 3
Room and Schedule: Higgins Hall 310 MWF 12:00 Noon-12:50PM
Satisfies Core Requirement: None
Prerequisites: BIOL2000
Corequisites: None
Cross-listed with: None
Frequency: Annually

BIOL451001
Cancer Biology
Taghian, Danielle
Spring 2024
The onset of cancer occurs through a multi-step process that is accompanied by the deregulation of fundamental cellular processes, including cell cycle control, apoptosis and angiogenesis. This course will provide an overview of the molecular and cellular changes associated with these processes and with the initiation, progression and metastasis of tumors. Topics covered will include tumorigenesis, tumor viruses, oncogenes, tumor suppressor genes, genomic instability and the current treatments for cancer. The class will draw on textbook and primary literature readings to enrich the current view of this complex disease.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 300 MWF 12:00 Noon-12:50PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040 and additional coursework in molecular cell biology (such as BIOL3040, BIOL4140, or BIOL4400)  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Spring  
**Student Level:** Undergraduate  
**Comments:** None  
**Status:** Offered

---

**BIOL457001**  
**Principles of Immunology**  
**Fofana, Ismael B**  
**Spring 2024**  
An introductory survey of the immune system, this course will examine the development and deployment of immunity from a molecular and cellular perspective. Topics will include innate versus adaptive immunity, B and T cell activation, antibodies and antigens, and immunological memory. Modern experimental techniques and the immune system's roles in infectious disease, cancer and autoimmune disease will also be discussed.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 310 TuTh 10:30AM-11:45AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040 and additional coursework in molecular cell biology (such as BIOL3040, BIOL4140, BIOL4400)  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Fall
BIOL483001
Research in Molecular Biology Lab
Fofana, Ismael B
Spring 2024
Satisfies the advanced experience requirement for the Biology major. An advanced project laboratory course for hands-on training in the experimental techniques of molecular biology under faculty supervision. In addition to formal lab training and discussions, students will have access to the lab outside class hours to work on projects intended to produce publication quality data. The research project will focus on environmentally-mediated gene expression in the organism Pseudomonas fluorescens. Methods taught include: DNA cloning techniques, DNA sequencing, polymerase chain reaction, and the use national databases for research and analysis. It is ideal for students who desire a solid introduction to hypothesis-driven research in molecular biology through practical training.

Credits: 3
Room and Schedule: Higgins Hall 570 TuTh 02:00PM-05:00PM
Satisfies Core Requirement: None
Prerequisites: BIOL2040
Corequisites: None
Cross-listed with: None

Status: Offered

BIOL487001
Research in Molecular Genetics Lab
Hoffman, Charles
Spring 2024
Satisfies the advanced experience requirement for the Biology major. The fission yeast Schizosaccharomyces pombe is an important model organism for the study of intracellular processes such as cell cycle control, transcription, DNA replication, chromosome maintenance, and signal transduction. This laboratory will involve original molecular genetic research using S. pombe that involves concepts related to forward genetics and gene manipulation. This course is recommended for students interested in pursuing graduate studies or careers in biomedical research.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 475 MW 01:00PM-04:00PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL 2040 and BIOL305 or BIOL315  
**Corequisites:** None

BIOL501001
Nobel Prize Winning Research in Medicine or Physiology
Burgess, David R
Spring 2024
Satisfies the advanced experience requirement for the Biology major. In this course we will discuss primary research literature in the fields of cell and developmental biology that have led to the award of the Nobel Prize. Each student will select a primary paper cited by the Nobel Foundation as justification for the award together with a supportive current review on the topic and present the background information to the class. The primary paper will be discussed at the following class period, with all students having defined responsibilities for discussion of the figures and data.

Credits: 2
Room and Schedule: Stokes Hall 103S M 03:00PM-04:50PM
Satisfies Core Requirement: None
Prerequisites: BIOL3040 or related course work in molecular cell biology
Corequisites: None
Cross-listed with: None
Frequency: Annually
Student Level: Both
Comments: None
Status: Offered

BIOL506001
Recombinant DNA Technology
Hoffman, Charles
Spring 2024
Satisfies the advanced experience requirement for the Biology major. This course will describe the theory and practice of recombinant DNA technology and its application within molecular biology research. Topics will include the cloning of genes from various organisms, plasmid construction, transcriptional and translational gene fusions, nucleic acid probes, site-directed mutagenesis, polymerase chain reaction, and transgenic animals. The goal of the course is to make the research-oriented student aware of the wealth of experimental approaches available through this technology.

**Credits:** 3  
**Room and Schedule:** Higgins Hall 265 TuTh 09:00AM-10:15AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL2040 and additional coursework in molecular cell biology (such as BIOL3040, BIOL4140, or BIOL4400) or genetics (BIOL3150, BIOL3190, or BIOL4170).  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Spring  
**Student Level:** Both

**Status:** Offered

---

**BIOL507101**  
**Microbial Community Ecology**  
**Momeni, Babak**  
**Spring 2024**  
Satisfies the advanced experience requirement for the Biology major. Polymicrobial communities can cause harmful infections as pathogens or facilitate food digestion as resident microbiota. They also have industrial applications for waste remediation or biofuel production. We will examine examples of microbial communities with implications in health, environment, or industry. The course surveys relevant ecological theories and covers current tools and methodologies used for characterization and analysis of microbial communities.

**Credits:** 2  
**Room and Schedule:** Higgins Hall 465 Th 01:00PM-02:50PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** BIOL 2010 and 2014; BIOL 414 and a statistics course recommended.  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Spring
For thousands of years, humans have thought of themselves as single autonomous organisms. With new sequencing technologies and experiments, we are learning that the human microbiome and commensal organisms are an important aspect of host biology, and change the idea of who we really are. Recent data suggest that we are more than Homo sapiens, but a symbiotic-organism that is surrounded with trillions of microorganisms in all surfaces. Recent studies suggest that the human microbiome and commensal microbes have important roles in human health and disease. Indeed, the gut microbiota aid in normal digestion, metabolism of nutrients and drugs, and development of the gut and immune system. Reduced bacterial diversity, as well as alterations in the microbiota composition, have been associated not only with gastrointestinal disease, but also obesity, diabetes, and metabolic syndrome. Direct evidence now suggests that transfer of the microbiome can play a role in host phenotypes, homeostasis, behavior, and disease pathogenesis. Using current scientific literature and reviews, we will investigate the role of the microbiome in human health and disease. Students will make short presentations of the papers, and the class will discuss the methodology and findings of the papers.

**Credits:** 2

**Room and Schedule:** Higgins Hall 552 Tu 10:30AM-12:20PM

**Satisfies Core Requirement:** None

**Prerequisites:** BIOL2000 Molecules and Cells and additional course work in molecular cell biology. Microbiology and/or Immunology strongly recommended.

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Every Spring

**Student Level:** Undergraduate

Seminar in Cellular Dynamics
Das, Maitreyi
Spring 2024
This course fulfills advanced experience requirement. This course explores topics in dynamic cellular processes using the primary scientific literature.

Credits: 2
Room and Schedule: Higgins Hall 552 TuTh 02:00PM-02:50PM
Satisfies Core Requirement: None
Prerequisites: Prerequisites include BIOL2000 (Molecules and Cells), BIOL2040 (Investigations in Molecular Cell Biology), and a genetics course (BIOL3050 or BIOL3150). Additional coursework in cell biology or biochemistry is recommended.
Corequisites: None
Cross-listed with: None
Frequency: Annually
Student Level: Both
Comments: None
Status: Offered

BIOL522001
Movement in Biology
Folker, Eric S
Spring 2024
This course satisfies the advanced experience requirement for the Biology major. In this upper level course, students will study the mechanisms and functions of movement across scales ranging from the functioning of the musculoskeletal system at the organismal level to the motions of proteins, lipids, and ions at the molecular level. Students will meet for 2 hours each week with one hour devoted to an interactive discussion of an underlying biological principle and the other hour devoted to the analysis of a single primary research article focused on that same biological principle. Students should have completed coursework at the 3000+ level in molecular cell biology. Previous or concurrent enrollment in Cell Biology and Biological Chemistry/Biochemistry I is strongly recommended.

Credits: 2
Room and Schedule: Higgins Hall 552 W 02:00PM-03:50PM
Satisfies Core Requirement: None
Prerequisites: None
Corequisites: None
BIOL523001
Immunity and Infectious Disease
Williams, Kenneth C
Spring 2024
Satisfies the advanced experience requirement for the Biology major. This course will focus on immune cells, the immune system's response to viral and bacterial infection and the pathogenesis resulting from these responses. Topics will include questions of self and non-self in immune responses, the role of mucosal immunity and gut flora in immune responses and pathogenesis, AIDS pathogenesis, vaccines, and cutting edge technological approaches to immune therapy. Reading materials will consist of a basic immunology text, classical primary papers, and research reports.

Credits: 3
Room and Schedule: Higgins Hall 465 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: None
Prerequisites: BIOL4570 or BIOL4140
Corequisites: None
Cross-listed with: None
Frequency: Every Spring
Student Level: Both
Comments: None
Status: Offered

BIOL538001
Vertebrate Biomechanics
Kenaley, Christopher P
Spring 2024
Satisfies the advanced experience requirement for the Biology major. This course will explore the physical principles underlying biological processes and mechanisms including movement, feeding, architecture, and transport. Drawing on physics and mechanical engineering, the course will explore how organisms swim, fly, walk, and consume resources, how they respond to moving fluids, and the relationship between their size and design of mechanical systems. Underlying all these topics will be investigations of how biological materials (e.g., wood, muscle, bone, skin, etc.) influence the mechanical behavior of complex life forms. The course will prepare students for more in-depth explorations of other related disciplines including ergonomics, orthopedics, kinesiology, and sports medicine.

Credits: 3
Room and Schedule: Higgins Hall 225 TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
Prerequisites: BIOL3030. Familiarity with basic Newtonian physics and mechanics is recommended.
Corequisites: None
Cross-listed with: None
Frequency: Periodically
Student Level: Both
Comments: None
Status: Offered

BIOL542001
Cancer As A Metabolic Disease
Seyfried, Thomas N, Phd
Spring 2024
Satisfies the advanced experience requirement for the Biology major. This seminar will review evidence showing that impaired cellular energy metabolism is the defining characteristic of nearly all cancers regardless of cellular or tissue origin. In contrast to normal cells, which derive most of their usable energy from oxidative phosphorylation, nearly all cancer cells become dependent on non-oxidative substrate level phosphorylations to meet energy demands. Evidence will be discussed supporting a general hypothesis that all hallmarks of cancer including genomic instability and metastasis can be linked to impaired mitochondrial function. A view of cancer as a metabolic disease will impact approaches to cancer management and prevention.

Credits: 3
Room and Schedule: Higgins Hall 465 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: BIOL2040 and BIOL3040
Corequisites: None
Cross-listed with: None
Frequency: Every Fall
Student Level: Both
Comments: None
Status: Offered

BIOL543001
Genomics and Personalized Medicine
Connolly, Timothy J
Spring 2024
Satisfies the advanced experience requirement for the Biology major. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, allowing for more informed choices about health. The students will be exposed to the scientific concepts and technologies empowering personalized medicine. Through lecture, research paper reading and discussion the students will understand how human genomic information has impacted current topics in biomedical research. Students will write a research paper focused on how genomic information has advanced understanding of a human disease and how translation of genomic information will impact treatment or disease detection in the future.

Credits: 3
Room and Schedule: Higgins Hall 260 MW 03:00PM-04:15PM
Satisfies Core Requirement: None
Prerequisites: BIOL2040 and a genetics or genomics course. Additional coursework in biochemistry and molecular biology is strongly recommended.
Corequisites: None
Cross-listed with: None
Frequency: Every Spring
Student Level: Both
Comments: None
Status: Offered

BIOL545001
Advanced Lab in Cell Imaging
Judson, Bret
Spring 2024
This course satisfies the advanced experience requirement for biology majors. This course will survey the various visualization techniques and instruments used by scientists and biomedical researchers: light microscopy, confocal, electron microscopy, super-resolution, and image processing. Students will discuss the experimental use of these techniques and instruments as described in the primary literature. The laboratory component will focus on becoming familiar with the instrumentation that we have available at Boston College. The course will culminate in individual projects of the students choosing utilizing equipment that we have in the laboratory.

Credits: 2
Room and Schedule: Higgins Hall 552 TuTh 04:00PM-06:00PM
Satisfies Core Requirement: None
Prerequisites: BIOL2040 and additional coursework in cell and/or molecular biology.
Corequisites: None

BIOL546001
Topics in Microbial Pathogenesis
Gubbels, Johannes M

Spring 2024
Satisfies the advanced experience requirement for the Biology major. In this course we will discuss primary research literature on various aspects of pathogenesis i.e., the microbial and/or immunological mechanism by which pathogens (prions, viruses, (myco)bacteria, protozoa, worms) cause disease. Each student will select a primary paper from a high impact journal together with a supportive review and present the background information to the class. The primary paper will be discussed at the following class period, with all students having defined responsibilities for discussion of the figures and data.

Credits: 3
Room and Schedule: Higgins Hall 465 MW 11:00AM-12:15PM
Satisfies Core Requirement: None
Prerequisites: BIOL2040 and additional coursework in immunology, microbiology, molecular/cell biology, undergraduate research, or other demonstrable experience in reading primary research literature.
BIOL618001
Scientific Proposal Writing
Gubbels, Johannes M; Williams, Kenneth C
Spring 2024
The purpose of the course is to develop students skills in research proposal writing, presentation, and critical evaluation. To meet these goals graduate students will be guided in the preparation and defense of an original research proposal in a field of their choice with no direct connection to their thesis topic.

Credits: 2
Room and Schedule: BY ARRANGEMENT
Satisfies Core Requirement: None
Prerequisites: None
Corequisites: None
Cross-listed with: None
Frequency: Every Fall

BIOL701201
Graduate Research Experience III
Meyer, Michelle M
Spring 2024
This seven-week research experience is designed to provide first year students with both technical and intellectual preparation to work in a faculty member's laboratory. Projects are assigned by the faculty advisor. To help develop communication skills, at the end of the seven week period, students give a 10-12 minute talk to the department describing their research.

BIOL812001
Graduate Introduction to Regenerative Biology
Gonzalez Rosa, Juan Manuel
Spring 2024
Regeneration is an incredibly complex, diverse, and fascinating phenomenon. Some animals can regenerate their entire body from small groups of cells, while others - including us - show very limited regenerative ability. Although the study of regeneration has attracted much attention, many questions remain unanswered. What is the origin of the new, regenerated tissue? What are the mechanisms that drive this phenomenon? Is regeneration just development, replayed? Can we capitalize on some of this knowledge to design human regenerative therapies? In this course, we will delve into primary literature, including both classic and contemporary papers, to explore some of these questions. We will focus on understanding the experimental approaches, analyzing the data critically, and discussing the author's interpretations in depth.

Capstone Courses: Fall 2023

UNCP550101
Capstone: Authenticity and Human Development
Bracher, Elizabeth R
Fall 2023
Seniors only. Capstone Seniors only. classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. The path to becoming a more authentic person is twofold: coming to know who you are and who you are not as well as sharing this information with others. As you progress along this path, you become more authentic and are rewarded for doing so. Why should you want to be more authentic? Misrepresenting yourself costs energy. More importantly, people just seem to know intuitively who is authentic and who is not. If you are, you will be seen as more trustworthy, more deserving of love, more skilled as a leader, and more likable. This course will help you to better recognize and improve on the areas of personal development called for in every Capstone course: your education up to now and in the future; your relationships; your role in society; your vocational callings and choice of career; and your spirituality. Assignments include group projects, personal projects, and lots of small and large group discussions.

Capstone: Life and Career Planning
Capalbo, Robert F
Fall 2023
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. This course provides an overview of life and career planning in the context of (1) career, (2) personal relationships, (3) spirituality, and (4) ethical decision making. Students are asked to develop autobiographical responses to a series of questions about their lives to find themes related to possible careers and relationship issues. Readings, cases, exercises, and guest lecturers will amplify those personal themes and common issues in life as we enter the twenty-first century. The integration of spirituality and ethical decision making into one's life will be addressed by readings on ethical perspectives and the students' written reflections.

Capstone: The Balancing Act
Olivieri, Scott D
Fall 2023
Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. College students have many competing demands: academics, friends, family, faith, service, and work all need attention. This just in--after college, it gets worse! This course begins with students reflecting on their commitments and choices up to now. Students will then establish personal priorities and learn strategies to become engaged in their future long-term commitments to career and community, while attending to family, friends, faith, personal well-being, and leisure. Readings will explore the changes ahead for young professionals balancing family, graduate school, and/or careers. The final assignment will be developing a personal road map to a full, meaningful, and balanced life.

Capstone: A Life Well Lived
DeChiara-Quenzer, Deborah
Fall 2023
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. This course engages students in serious reflection on what it means to have "a life well lived." It is advantageous to do this reflection at this time in your life, as it affords you time and opportunity to shape your life going forward. What kind of life do you hope to live? What will bring you peace and satisfaction--dare we say, even happiness? Students will be asked to examine themselves by looking both backwards and forwards in many dimensions of their lives (education, ethics, relationships, career, etc.) while learning what others have said about having a meaningful life.

Capstone: Surviving Life with Humor
Jayasundera, Thusitha
Fall 2023
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. A sense of humor can be a powerful tool that helps us navigate real-life situations that may otherwise cause us anxiety and distress. This course aims to sharpen your emotional intelligence through humor, and help cultivate values and attitudes that will serve you well in life. Class discussions will allow us to acknowledge another point of view with empathy, and convey our own ideas with humor and humility. We will study the Capstone foundations (spirituality, vocation, citizenship, relationships) through the lens of humor and, hopefully, equip you with yet another valuable tool for success, as you embark on the next chapter of your lives.

Capstone: Creativity and Self
Roberts, Susan A
Fall 2023

Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Creativity is the act of bringing that which does not exist into existence, of bringing forward that which has previously never lived. It is the remarkable experience of bringing something out of nothing. In order to bring something new into the world, you must be willing to go into the unknown. Just as the poet might listen inwardly and stay open for the next word and just as the artist might pay attention to the images that arise from within, creativity asks that we have one foot in what is known, or existence, and one foot in what is not-known, or non-existence. This requires an ability to be still, to look both inward and outward, and then to record the resulting art-making or in life. In this Capstone course, students will attend to two areas: the meaning of art and mindfulness, and their own history of making (or lack thereof) and how they would like to build artistic sensibility, creativity and creation into their lives. We will investigate the spiritual roots of creativity, and the ways in which creativity and appreciation of art and art-making can contribute meaningfully to the development of one as a full citizen of the world. You do not have to have any experience in art-making to take this course. Texts include: Creativity: Where the Divine and Human Meet, by Matthew Fox and Art and Fear: Observations on the Perils (and Rewards) of Artmaking, by David Bayles and Ted Orland, Start Where You Are: A Journal for Self-Exploration, by Meera Lee Patel (you should write in this every week; you'll be presenting it in your "exit interview" at semester's end)

Capstone: Desire and Discernment
Muldoon, Timothy P
Fall 2023
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. First, the course will involve careful reflection on the sifting and pruning of desires. It will introduce philosophical reflection on desire from ancient Greece to modern philosophy, paying particular attention to the Ignatian tradition of discernment of spirits. Second, it will invite particular reflection on our relationships, and the desires that we have for the relationships we seek to cultivate over the course of our lives. Third, it will invite students to reflect on their experiences of work and preparation for a career, asking how their Boston College education has formed them. Fourth, we will reflect on our citizenship within communities: family, local community, society, nation, and world.

Capstone: Leadership and Mindfulness
Waddock, Sandra A
Fall 2023
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. No matter what your major, you will participate in groups and organizations that will consistently ask or expect you to lead. The best leader is authentic, has integrity, is self- and other-aware, and acts with this awareness firmly in mind. Good leaders, that is, act mindfully with respect for the people and world around them. This course explores your development as a mindful focusing inward and outward, reflecting on where you have come from and where you are going, what type of world you want to live in, your relationships with others, and how you can be an effective leader.

**Capstone: Finding and Following Life's Calling**  
**Harrington, J**  
**Fall 2023**  
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. We live in changing times. Major social trends are impacting us as individuals, employees, family members, and citizens. These changes call on us to play a much more pro-active role in managing our lives (where possible) and to respond to the unexpected callings we hear. Doing this effectively requires an in-depth self-understanding coupled with a heartfelt desire to live a life of meaning. This course will help students develop a clearer sense of identity through a rigorous self-assessment process. It will help each answer the questions: Who am I? How can I make a difference in the world?

UNCP557001
Capstone: Adulting
Arnold, Karen
Fall 2023
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Most college students in their early 20s feel neither fully adult nor fully competent in the tasks, responsibilities, and behaviors that are traditionally associated with grown-up life. In this class, students will take stock of their journey to adulthood so far and look ahead to what relationships, work, citizenship, and spirituality might look like in post-college life. Readings on the developmental psychology of young adulthood will be paired with popular media, exercises, and reflective writing to help students progress in their own "adulting" as they prepare to negotiate the transition out of college.

UNCP557901
Capstone: Becoming a Self
Wilkins, Jeremy
Fall 2023
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. A Capstone seminar combines a deep exploration of the self, with a disciplined academic exercise in substantive reading, writing, and discussion, to foster a place to ponder ultimate questions within a community of discourse. This seminar, like all Capstone seminars, invites participants to look both backward and forward. It asks, What have you made of your Boston College education? What has it made of you? It also inquires, How will you carry out the lifelong commitments you have begun to envision? Becoming a Self focuses these questions and goals in a particular direction. Who am I? What will make me happy? Who do I wish to become? What do I owe myself, others, God? Am I called to a special purpose, and how would I discern it? What kind of story do I tell about myself? How much of that story is really my own, and how much have I just drifted into? How do I envision the path from my present self to the self I would like to be in ten, twenty, fifty years? What is the scope, and what are the limits, of my agency to shape myself, or to do good or harm in the world, and how do I respond to circumstances, even very great evils, beyond my control? How do I relate my work and career to my sense of purpose, calling, or desire to be of service? Well explore these questions together through narrative (fiction, diaries, and films), theory, and practices, including some meditative walks, journaling, and the Examen of Consciousness from St Ignatius of Loyola, founder of the Jesuits.

Capstone Courses: Spring 2024

UNCP550001
Capstone: One Life, Many Lives
Weiss, James M
Spring 2024
Capstone classes cannot be taken Pass/Fail. You may take only one Capstone class before graduation. This Capstone is designed for students who have engaged in service projects during college and want to reflect on that as they plan their future lives. The service projects may have been through BC (Pulse, 4Boston, Arrupe, service trips, etc.) or on their own in Boston, the U.S., or abroad. Please contact Fr. Weiss to enroll: weissj@bc.edu or 617 552 3897. This course gives you the chance to review what you have made of your education and preview your long-term life commitments to work, relationships, community, and spirituality. We read fiction, psychology, sociology, and wisdom figures to find the deeper continuity underlying our many experiences. Students lead discussions, conduct interviews of working people, and cap off their Capstone by writing their own autobiography.

Capstone: The Courage to Becoming
Bracher, Elizabeth R
Spring 2024
Capstone Seniors only. classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. The title of the Cornerstone elective The Courage to Know implies it requires courage to be an educated person. Wisdom evolves from having courage to set aside previous ways of being, seeing, and knowing, in order to incorporate new and previously unexplored understandings of the world around us. As a first-year student at BC, you courageously set out to know yourself in new ways while transitioning into college. Now, as seniors transitioning out of college, how has that early experience of CTK and your experience of Jesuit education combined to give you the Courage to Be...Be Attentive, Be Intelligent, Be Responsible, Be Reasonable, and Be Loving as you move from undergraduate life at BC into professional life beyond Chestnut Hill? Eligible seniors for this course MUST have taken CTK with Dr. Bracher either in Fall 2020 or Spring 2021. If seats are not filled, students from other sections of CTK in either of those semesters will be considered for overrides. Email Dr. Bracher renicke@bc.edu to ask to be enrolled in this course.

Capstone: Your Future, Your Choice
Michalczyk, Susan A
Spring 2024
Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Reflecting upon your BC years and looking ahead, in Capstone you'll center yourself in your present to process learning and relationships. Journeying forward, you'll learn more about yourself with each choice you make. Written and visual narratives, fiction, autobiography and film connect your college experience with numerous aspects of your life -- past, present, future. In our search for meaning, we draw strength from relationships: to self, to others, to God. The profoundest relationships build upon identifying the self as other, recognizing the sacred in the profane. Choosing a life of mutual respect defines the human condition at its best.

Capstone: Growing Up Ethnic in America
Sarr, Akua
Spring 2024
Capstone classes may NOT be taken Pass/Fail. Seniors only. You may take only ONE Capstone class before graduation. In this seminar students will read writing that depicts a variety of experiences but suggest that what constitutes an American identity is far from settled. Ethnic difference has a profound effect on personal and social understandings of what it means to be an American. As we discuss the literature, students will be expected to share their own personal narratives of growing up stories of race, ethnicity, class, gender, faith, and nationality and what it means to be American. Some of the writers we will read include: Jhumpa Lahiri, Amy Tan, Louise Erdrich, Chang Rae-Lee, Sherman Alexie, Sandra Cisneros, Junot Diaz, Edwidge Danticat, Mat Johnson and Ta-Nehisi Coates.

Capstone: Love and Indoctrination
Kaplan-Maxfield, Thomas
Spring 2024
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. In our world of political spin and fake news, the surveillance state and social media, the pressure to separate what's real and valuable from what's fake and mere propaganda (another way of saying lies) is paramount, and critical for figuring out how to live, practically, spiritually, intellectually and psychologically. In George Orwell's 1984, the affair of Winston Smith and Julia threatens the entire structure of Big Brother. Why? What is it about love that threatens large systems based on indoctrination? In this course we will explore and develop working definitions of both love and indoctrination in order to differentiate them.

**Capstone: Working, Playing, Being**

**Storey, David E**  
**Spring 2024**

Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. The conventional wisdom is that BC student culture is "work hard, play hard." But what do we mean by "work" and "play" here? How do these implicit meanings reflect broader cultural forces? And do these meanings serve us well? Senior year is an exciting but anxious time, and this seminar is a chance for you to: (a) reflect on how your education has shaped you, and how you have shaped your education and (b) explore your goals, fears, hopes, and expectations around life post-graduation with a small group of peers. We will examine: (1) the meaning of, and relationship between, work and leisure in your own life; (2) how they have developed since your freshman year in light of your education at BC and; (3) how they figure into your vision of a fulfilling life.

Regan, Tracy L

Spring 2024

Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. As your graduation from Boston College looms, soon you'll have the opportunity to join the chorus of people proclaiming that college was the best four years of their life. Why does everyone say that and do you feel that way? If not, will you feel that way at some point in the future? The coveted real world awaits you where you'll finally have a chance to set the world aflame. As you approach this important juncture in your life, this class will provide you the opportunity to reflect and discuss your time on the Heights all the while helping you prepare for the decade(s) ahead. How did you grow during your time here? What lessons did you learn? Do you have any regrets? What are your most cherished memories? Did you become a person for others? And how will you carry the lessons you learned into the next proverbial chapter of your life as you navigate a career, relationships, a family, getting older, etc.? You'll have a chance to read a variety of viewpoints about the next decade of your life and beyond. As a class, we'll consider your academic, professional, and personal development in the context of relationships, spirituality, and citizenship. You'll join in conversation with your peers, under the guidance of an older economist who has experienced a lot of this already, and be ready to engage in lively dialogue on a weekly basis with the opportunity to reflect, think, and debate matters through a series of written assignments.

Credits: 3
Room and Schedule: Stokes Hall 145N Tu 04:30PM-06:50PM
Satisfies Core Requirement: None

UNCP553301
Capstone: Desire and Discernment
Muldoon, Timothy P
Spring 2024
Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. First, the course will involve careful reflection on the sifting and pruning of desires. It will introduce philosophical reflection on desire from ancient Greece to modern philosophy, paying particular attention to the Ignatian tradition of discernment of spirits. Second, it will invite particular reflection on our relationships, and the desires that we have for the relationships we seek to cultivate over the course of our lives. Third, it will invite students to reflect on their experiences of work and preparation for a career, asking how their Boston College education has formed them. Fourth, we will reflect on our citizenship within communities: family, local community, society, nation, and world.

UNCP555301
Capstone: Poets, Philosophers, and Mapmakers
McNellis, Paul W, SJ
Spring 2024
We go through life with mental maps of reality in various degrees, implicit or explicit. A liberal arts education presupposes such a map of the intelligible world. Is it accurate? What does your map of reality look like? How has it changed since freshman year? The goal of the seminar is to help you see what kind of map you implicitly have now and to begin to ask what you want the map to look like ten years after graduation. How do you develop an open rather than closed map?

**Credits:** 3

**Room and Schedule:** Stokes Hall 209S Th 04:30PM-06:50PM

**Satisfies Core Requirement:** None

**Prerequisites:** Completion of Philosophy and Theology core or Permission of Department

**Corequisites:** None

**Capstone: How We Decide**

**Lamoureux, Jeffrey A, PHD**

**Spring 2024**

Seniors only. Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Why did I eat at White Mountain at 11PM last night? And how can my friends convince me to go to Cityside when I know I should be studying? In this seminar, we will focus on how the mind and brain function to produce the decisions we ourselves make. The class is open to students from all majors, and there is no science prerequisite. Throughout the semester, we will reflect on our own past decisions, and consider alternative decision making strategies for the future.

CHEM100601  
**Thinking Like a Chemist**  
Hartmann, Nathaniel J; Keen, Clarissa  
**Summer 2023**  
This course is intended to prepare students for the General Chemistry sequence and will develop students' confidence with core chemistry concepts such as characterizing substances and mixtures, structure-property relationships, chemical reactions, energy, and equilibrium. Students will explore these concepts through real-world examples with a focus on developing problem solving skills and recognizing the cumulative nature of the topics. Students will also discuss best practices for notetaking and study habits for succeeding in chemistry.

**Credits:** 1  
**Room and Schedule:** 8/9 - 8/23; Devlin Hall 117 MTuWThF 09:30AM-11:15AM

CHEM101101  
**General Chemistry I (summer)**  
Quast, Sarah A  
**Summer 2023**  
This course will only be offered during the summer session. This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry. Topics include: atoms and molecules; stoichiometry and introduction to reactions in aqueous solutions; properties of gases; thermochemistry and the first law of thermodynamics; quantum theory and atomic structure; chemical periodicity; and bonding in diatomic and polyatomic molecules.

**Credits:** 3  
**Room and Schedule:** June 1 - June 28; Merkert Chemistry Center 130 MTuWTh 09:00AM-11:30AM
CHEM101201
General Chemistry II (summer)
Quast, Sarah A
Summer 2023
This course will only be offered during the summer session. This course is a continuation of CHEM1011. Topics include: properties of solids and liquids; colligative properties; chemical kinetics; equilibrium; acids, bases, and buffers; solubility and precipitation; spontaneity, free energy, and the second law of thermodynamics; and electrochemistry.

Credits: 3
Room and Schedule: July 10 - August 4; Merkert Chemistry Center 130 MTuWTh 09:00AM-11:30AM
Satisifies Core Requirement: Natural Science
Prerequisites: None

CHEM201101
Organic Chemistry I (summer)
Atkinson, Karen E
Summer 2023
This course will only be offered during the summer session. This course provides an introduction to the properties and applications of organic molecules and reactions. An understanding of the relationship between molecular structure and function with an emphasis on mechanistic principles is emphasized. This course is intended for students with an interest in science or medicine.

Credits: 3

Chemistry Courses: Fall 2023

CHEM110501
Chemistry and Society I
Keen, Clarissa
Fall 2023
For non-science majors or for those who do not require a lab science course. This is a two-semester sequence with the emphasis during the first semester placed on basic chemical principles and their application to environmental issues. Topics covered include air and water pollution, global warming, ozone depletion, hazardous waste, and energy use and alternative energy sources. The goal of the course is to develop a knowledge base from which one can make intelligent decisions about local global environmental issues as well as formulate solutions to the ever-increasingly complex problems of today's technological society.

**Yu, Devon**

**Fall 2023**

This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships and chemical equilibrium and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

**Credits:** 0

**Room and Schedule:** Merkert Chemistry Center 129 W 10:00AM-10:50AM

**Satisfies Core Requirement:** Natural Science

**Prerequisites:** One year of high school chemistry.

**Corequisites:** CHEM1111

**Cross-listed with:** None

**Frequency:** Every Fall

**Student Level:** Undergraduate

**Comments:** None

**Status:** Offered
CHEM110927
General Chemistry I
Pamunuwa, Konara M

CHEM111101
General Chemistry Laboratory I
Grimaud, Alexis
Fall 2023
Laboratory required of all students enrolled in CHEM1109. One three-hour period per week. Experiments reflect and apply the principles learned in the lecture course. Computers are used to both acquire and analyze data. The semester concludes with a group project where students are required to design their own experiments to solve a problem.

Credits: 1
Room and Schedule: Merkert Chemistry Center 116 M 10:00AM-12:50PM
Satisifies Core Requirement: None
CHEM111102
General Chemistry Laboratory I
Chatterjee, Abhishek
Fall 2023
Laboratory required of all students enrolled in CHEM1109. One three-hour period per week. Experiments reflect and apply the principles learned in the lecture course. Computers are used to both acquire and analyze data. The semester concludes with a group project where students are required to design their own experiments to solve a problem.

__________________________________________

CHEM111701
Honors Modern Chemistry I
Waegle, Matthias
Fall 2023
This course is intended for students from any major (including undecided) with a strong foundation and interest in chemistry. CHEM1117 begins with the theoretical description of atomic and molecular structure and with examples of modern experimental techniques for visualizing and manipulating individual atoms and molecules. The laws of thermodynamics and kinetics are studied to understand why chemical reactions occur at all, why it is that once reactions start they can't go all the way to completion, and how molecules act as catalysts to speed up reactions without being consumed themselves.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: Natural Science
Prerequisites: None
Corequisites: CHEM1119
Cross-listed with: None

CHEM111901
Honors Modern Chemistry Laboratory I
Young, Allison P
Fall 2023
Laboratory required for all students enrolled in CHEM1117. This laboratory course stresses discovery-based experiments. It uses state-of-the-art instrumentation to illustrate the principles discussed in CHEM1117-1118 and introduces students to techniques used in modern chemical research. One three-hour period per week.

CHEM116101

Life Science Chemistry

Hartmann, Nathaniel J

Fall 2023

This course first introduces basic chemical principles in preparation for a discussion of the chemistry of living systems that forms the major part of the course. Organic chemical concepts will be introduced as necessary, and applications will be made wherever possible to physiological processes and disease states that can be understood in terms of their underlying chemistry.

Credits: 3

Room and Schedule: Merkert Chemistry Center 18 F 09:00AM-11:45AM
Satisifies Core Requirement: None
CHEM223101
Organic Chemistry I
Deak, Holly L
Fall 2023
An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties, reaction mechanisms, and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 3
Room and Schedule: Merkert Chemistry Center 127 MWF 10:00AM-10:50AM
Satisfies Core Requirement: None
Prerequisites: CHEM1110 or Note that CHEM2231 is a prerequisite for CHEM2232
Corequisites: CHEM2233

---

CHEM223115
Organic Chemistry I
Palka, Kyle T
Fall 2023
An introduction to the chemistry, properties, and uses of organic compounds. The correlation of
structure with properties, reaction mechanisms, and the modern approach to structural and
synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound
experimental techniques through the synthesis of selected compounds.

Credits: 0
Room and Schedule: Merkert Chemistry Center 127 M 05:00PM-05:50PM
Satisfies Core Requirement: None
Prerequisites: CHEM1110 or Note that CHEM2231 is a prerequisite for CHEM2232
Corequisites: CHEM2233

CHEM223301
Organic Chemistry Laboratory I
Snapper, Marc
Fall 2023
Laboratory required of all students enrolled in CHEM2231. One four-hour period per week. Students acquire fundamental organic lab techniques in the context of principles learned in the lecture course. The semester concludes with a group project where students are required to design their own experiments to solve a problem.

Credits: 1
Room and Schedule: Merkert Chemistry Center 18 M 12:00 Noon-03:50PM
Satisifies Core Requirement: None
Prerequisites: None
Corequisites: CHEM2231
Cross-listed with: None
Frequency: Every Fall
Student Level: Undergraduate
CHEM223302
Organic Chemistry Laboratory I
Liu, Shih-Yuan
Fall 2023
Laboratory required of all students enrolled in CHEM2231. One four-hour period per week. Students acquire fundamental organic lab techniques in the context of principles learned in the lecture course. The semester concludes with a group project where students are required to design their own experiments to solve a problem.

Credits: 1

Chemistry 335101: Analytical Chemistry

Metz, Kenneth R, Ph.D.

Fall 2023

Designed primarily for sophomore and junior students, this course is an introduction to the principles and practice of analytical chemistry, including the statistical analysis of data and widely-used chemical methods and instrumental approaches such as chromatography, spectrophotometry, and electrochemistry. In the laboratory, the aims are for students to develop good analytical technique and to acquire accurate, precise data.

Credits: 4

Room and Schedule: Higgins Hall 310 MWF 11:00 AM-11:50 AM

This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.

Credits: 3
Room and Schedule: Merkert Chemistry Center 127 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: CHEM2231 and BIOL2000 and CHEM2232 or equivalent.

CHEM446501
Biochemistry (Chemistry Majors)
Chatterjee, Abhishek
Fall 2023
This course is an accelerated one-semester survey of the basic principles of biochemistry emphasizing a broad understanding of the chemical events in living systems. Although the course is an introduction to biochemistry, prior proficiency in general and organic chemistry is required. Topics will include structure and function of biological molecules, including proteins, enzymes, nucleic acids and biological membranes. Also covered in the course will be bioenergetics, metabolism and photosynthesis. Experimental methods will also be discussed as they relate to course topics. This course fulfills the biochemistry requirement for the Chemistry major.

Credits: 3
Room and Schedule: Campion Hall 302 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: CHEM2232 and CHEM2231. Non-chemistry majors are requested to consult with the instructor before registering for this course.

CHEM447501
Physical Chemistry I
Grimaud, Alexis
Fall 2023
This course deals with the foundations and applications of thermodynamics and reaction kinetics. Topics include: (1) classical thermodynamics, including the Laws of Thermodynamics, Helmholtz and Gibbs energies, chemical potential, and thermodynamic descriptions of phase equilibria and chemical equilibrium; (2) kinetic theory of gases; (3) chemical reaction rate laws and mechanisms.

**Fall 2023**  
This course deals with the foundations and applications of thermodynamics and reaction kinetics. Topics include: (1) classical thermodynamics, including the Laws of Thermodynamics, Helmholtz and Gibbs energies, chemical potential, and thermodynamic descriptions of phase equilibria and chemical equilibrium; (2) kinetic theory of gases; (3) chemical reaction rate laws and mechanisms.

**Credits:** 0  
**Room and Schedule:** Merkert Chemistry Center 129 M 06:00PM-06:50PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** None  
**Corequisites:** MATH2202 and PHYS2100-2101/2200-2201 are pre- or co-requisites.  
**Cross-listed with:** None  
**Frequency:** Every Fall  
**Student Level:** Undergraduate  
**Comments:** None

CHEM449101
Introduction to Undergraduate Research I
Bao, Junwei L
Fall 2023
CHEM5591-5592 or CHEM5593-5594 cannot be taken concurrently. Continuation to CHEM4492 requires permission of the adviser. Sophomores or juniors who show exceptional ability may engage in an independent research project under the supervision of a faculty member. The experimental work will be preceded by library research on the project and training in essential laboratory techniques.

CHEM553101
Modern Methods in Organic Synthesis I
Hoveyda, Amir H; Morken, James P
Fall 2023
Survey and analysis of reactions employed in the synthesis of medicinally significant compounds. An in-depth understanding of the mechanistic details for each transformation will be emphasized. Topics will relate fundamental structural and electronic properties to issues of chemical reactivity. An emphasis will be placed on carbon-carbon bond and ring forming reactions.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 MWF 12:00 Noon-12:50PM

CHEM553701
Mechanistic Organic Chemistry
Liu, Shih-Yuan
Fall 2023
This course will explore factors influencing organic reaction mechanisms and methods for their determination. A partial list of the topics to be covered includes chemical bonding and consequences for structure and reactivity; steric, electronic, and stereoelectronic effects; conformational analysis; thermodynamic and kinetic principles; applications of molecular orbital theory; and reactive intermediates.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 TuTh 10:30AM-11:45AM
CHEM553901
Principles and Applications of NMR Spectroscopy
Jayasundera, Thusitha
Fall 2023
Nuclear Magnetic Resonance (NMR) is an indispensable tool for all organic chemists. This course will introduce the theory of NMR spectroscopy with concurrent experiments that illustrate these concepts firsthand, so that the subject matter is easier to absorb. Applications of NMR in biochemistry will also be discussed, with a guided, hands-on project that exemplifies how NMR is utilized to study large macromolecules (such as proteins and nucleic acids), which will provide valuable practical experience to students. Material covered in this class will prepare you well for graduate studies, or a chemistry/biochemistry-related career in industry.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 Tu 06:00PM-08:30PM
Satisfies Core Requirement: None
Prerequisites: Organic Chemistry is recommended as a prerequisite.
Corequisites: None
Cross-listed with: None

CHEM556001
Principles of Chemical Biology
Gao, Jianmin
Fall 2023
An introduction to the chemistry of biological macromolecules, including proteins, nucleic acids, and carbohydrates. Students will learn the structure and nomenclature of the monomer building blocks as well as the macromolecules. Chemical principles that define secondary and tertiary biomolecular structure as well as state-of-the-art chemical (or chemical-biological) synthetic procedures will be presented. Examples of specific types of binding interactions, catalysis, or recognition processes as viewed from a chemical perspective will be discussed.

Chem557901
Thermodynamics and Statistical Mechanics
Mohanty, Udayan
Fall 2023
This course deals with the foundations and applications of thermodynamics and equilibrium statistical mechanics. Topics include thermodynamic laws, microcanonical, canonical, and grand ensembles and its applications to a variety of problems in physical and biophysical chemistry. Advanced topics such as phase transition, Langevin dynamics and time-correlation functions will be covered.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 MWF 10:00AM-10:50AM
Satisfies Core Requirement: None
Prerequisites: CHEM4475 and CHEM4476 or courses equivalent to undergraduate courses in thermodynamics and quantum chemistry
Corequisites: None

CHEM667601
Physical Chemistry: Principles and Applications
Bao, Junwei L
Fall 2023
This course intends to build a solid and rigorous foundation for chemistry graduate students to understand chemistry and materials at the microscopic level, and study the physical nature of bonding and chemical reaction dynamics quantitatively. We focus on fundamental principles of quantum mechanics and their connections to chemistry/chemical physics. Topics covered in this course include principles of quantum mechanics, the connections between classical and quantum dynamics, exactly solvable systems, variational principle, introductory perturbation theory, and Hartree-Fock theory. We will also cover some necessary mathematical tools that are tremendously useful in understanding modern physical chemistry.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 MWF 09:00AM-09:50AM
Satisfies Core Requirement: None
Prerequisites: This course is theory/math-intensive and involves active learning. We strongly recommend students who are well prepared in introductory quantum mechanics (one-semester undergraduate-level quantum mechanics or equivalent) and in math (multivariable c...

Chemistry Courses: Spring 2024

CHEM110601
Chemistry and Society II
Keen, Clarissa
**CHEM111001**  
*General Chemistry II*  
*Hartmann, Nathaniel J*

**Spring 2024**

This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

**Credits:** 3  
**Room and Schedule:** Devlin Hall 8 MWF 09:00AM-09:50AM  
**Satisfies Core Requirement:** Natural Science  
**Prerequisites:** CHEM1109  
**Corequisites:** CHEM1112  
**Cross-listed with:** None  
**Frequency:** Every Spring  
**Student Level:** Undergraduate

Spring 2024
This course is intended for students whose major interest is science or medicine. It offers a rigorous introduction to the principles of chemistry with special emphasis on quantitative relationships, chemical equilibrium, and the structures of atoms, molecules, and crystals. The properties of the more common elements and compounds are considered against a background of these principles and the periodic table.

Credits: 0
Room and Schedule: Merkert Chemistry Center 129 W 04:00PM-04:50PM
Satisifies Core Requirement: Natural Science
Prerequisites: CHEM1109
Corequisites: CHEM1112
Cross-listed with: None
Frequency: Every Spring
Student Level: Undergraduate

CHEM111501
Fundamentals of Chemistry
Fox, Daniel J
Spring 2024
This course is designed to prepare students for the first semester of General Chemistry. The course will consist of two major parts, the first of which will focus on the mathematical skills and problem solving that are fundamental to the deeper understanding of chemical concepts. The second part of the course will focus on the application of problem-solving techniques with basic chemical concepts such as atomic structure and isotopes, balancing chemical equations, and stoichiometry. Once they have mastered these proficiencies, students will have a strong foundation in the skills necessary to succeed in higher level chemistry courses. Although the course does meet the Natural Science Core Requirement for MCAS, students will only be granted permission to take the course based on their desire to continue on with the Chemistry curriculum.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 MWF 01:00PM-01:50PM
Satisfies Core Requirement: Natural Science
Prerequisites: Permission of Instructor
Corequisites: None

CHEM111801
Honors Modern Chemistry II
Morken, James P
Spring 2024
This is the second part of a one-year course that serves as the Honors alternative to the two-semester General Chemistry CHEM1109-1110. This course will build upon the chemical fundamentals that were covered in the first semester to introduce organic chemistry as well as its physical basis. Topics to be covered include the structure and reactivity of organic compounds.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: Natural Science
Prerequisites: CHEM1117
Corequisites: CHEM1120

CHEM223201
Organic Chemistry II
Deak, Holly L
Spring 2024
An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties and reaction mechanisms and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

Credits: 3
Room and Schedule: Merkert Chemistry Center 127 MWF 10:00AM-10:50AM
Satisfies Core Requirement: None
Prerequisites: CHEM2231
CHEM223202

An introduction to the chemistry, properties, and uses of organic compounds. The correlation of structure with properties and reaction mechanisms and the modern approach to structural and synthetic problems are stressed throughout. In the laboratory, the aim is acquisition of sound experimental techniques through the synthesis of selected compounds.

CHEM332201
Introduction to Inorganic Chemistry
Fox, Daniel J
Spring 2024
Though not required, one year of Organic Chemistry (CHEM2231-2232 or CHEM1118 and CHEM2241) is recommended as a prerequisite for this course. This course offers an introduction to inorganic chemistry. Topics include: applications of group theory to describe structure and bonding, coordination chemistry, organometallic chemistry, bioinorganic chemistry, crystal packing, and semiconducting and superconducting materials.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 MWF 11:00AM-11:50AM

CHEM335601
Introduction to Mass Spectrometry and Its Applications
Domin, Marek
Spring 2024
The course will start with a brief introduction to the history of mass spectrometry along with terminology, followed by a discussion of the commonly used ionization modes coupled to typical analyzers. Applications of mass spectrometry will include its use in biological and medical research, environmental science, imaging, forensic science, metabolomics, proteomics, lipidomics, hydrogen-deuterium exchange, and the use of mass spectrometry in the operating room. The course will also address a new area of mass spectrometry, Ambient Ionization, and its applications.

Modern Laboratory Techniques of Photocontrolled Radical Polymerization  
Niu, Jia  
**Spring 2024**
Polymer science is indispensable in providing materials to support our current lifestyle and may provide important solutions to a sustainable and eco-friendly society in the future. This course will survey and analyze the contemporary laboratory techniques of photocontrolled radical polymerization. Participants will have hands-on experience of developing methods to control reactivities in polymerization and gain valuable experience in the concept and practice of reaction optimization and product analysis in the modern polymer science.

**Biochemistry II**  
**Gao, Jianmin**  
**Spring 2024**  
This course is a two-semester introductory-level course in biochemistry. Topics in the first semester concentrate on protein structure and function, bioenergetics, kinetics and mechanisms of enzyme reactions, intermediary metabolism, control of metabolic pathways, and photosynthesis. Topics in the second semester concentrate on the structure of nucleic acids, recombinant DNA technology, mechanisms of gene rearrangements, DNA replication, RNA synthesis and splicing, protein synthesis, control of gene expression, membrane transport, and hormone action. Experimental methods will also be discussed as they relate to course topics.

**Credits:** 3

Status: Offered
This course intends to build a foundation for understanding the structures of matter and chemical reactions via quantum mechanics and the relationship between structures and macroscopic properties via statistical mechanics. This course serves as the gateway to appreciating modern chemical science with rigorous and quantitative physical models. The topics to be covered include basic principles of quantum mechanics, exactly solvable systems, variational principle, molecular orbital theory and Hückel theory, qualitative solid-state band structure, basic group theory, Boltzmann distribution, ideal-gas statistical thermodynamics, heat capacity of simple solids, and transition-state theory for reaction rate.

Credits: 3
Room and Schedule: Merkert Chemistry Center 130 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: None
Prerequisites: MATH2202 and PHYS2101 or PHYS2201 Introductory Physics II (may be taken concurrently). MATH2210 Linear Algebra and PHYS3100 Vibrations and Waves are recommended but not required.
Corequisites: MATH2202 and PHYS2100-2101/2200-2201 are pre- or co-requisites.

CHEM551301
Synthetic Biology: at the interface of Biology, Chemistry, and Engineering
Chatterjee, Abhishek
Spring 2024
Traditionally, biological sciences have focused on characterizing existing biological systems. As our understanding of the natural biological systems advanced dramatically over the last century, opportunities to create 'synthetic' biological systems with novel functions emerged. Synthetic Biology is a young cross-disciplinary field that aspires to transform the promise of engineering new biological functions into a reality. Over the last two decades, synthetic biology has advanced tremendously, providing us transformative new tools to study biology, as well as powerful new therapeutic strategies that are revolutionizing modern medicine. This course will provide a primer to this discipline by introducing some of the core topics, followed by student-led discussions of recent literature.

Credits: 3
Room and Schedule: Merkert Chemistry Center 129 TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
Prerequisites: CHEM232; one course in biochemistry; one semester of molecular/cell biology
Corequisites: None
Cross-listed with: None
Frequency: Periodically
Student Level: Both

CHEM552301
Organometallic Chemistry
Zhang, Xiao-Xiang
Spring 2024
The course is intended for graduate students and advanced undergraduates who have completed or are currently enrolled in organic and inorganic chemistry courses. This course will present concepts of organometallic chemistry, e.g., the chemistry of compounds that have bonds between metals and carbon. Organotransition metal chemistry will be emphasized. Among the areas to be covered will be structure and bonding in organotransition metal complexes, ligand systems, catalysis, polymerizations, common reactions, and applications in organic synthesis.

Credits: 3
Room and Schedule: Merkert Chemistry Center 129 TuTh 10:30AM-11:45AM
CHEM554001  
Magnetic Resonance in Biology  
Jayasundera, Thusitha  
Spring 2024  
Innovations in the fields of biology and medicine over the last three decades have been rapid and immense. This course will focus on the applications of magnetic resonance to solve problems in chemistry, chemical biology, biochemistry, and biophysics. The backdrop for the class will be a hands-on exercise, working on the complete NMR chemical shift assignments (backbone, side chain, distance) towards the structure determination of a small protein. Concurrently, we will discuss topics such as magnetic resonance imaging (MRI), NMR of metabolomics and nucleic acids (DNA/RNA), NMR in drug discovery, dynamic nuclear polarization (DNP) and electron paramagnetic resonance (EPR) spectroscopy.

Credits: 3  
Room and Schedule: Merkert Chemistry Center 130 Tu 06:00PM-08:30PM

CHEM554401  
Modern Methods in Organic Synthesis II  
Snapper, Marc  
Spring 2024
Survey and analysis of contemporary strategies employed in the synthesis of medicinally significant natural and unnatural products. Examines the creativity and logic of approaches toward medicinally important compounds. Topics will include novel strategies toward synthetic problems and landmark total syntheses as well as issues in the current chemical literature.

CHEM555201
Advanced Methods in Chemistry I
Metz, Kenneth R, PHD
Spring 2024
This course discusses the principles, methods, and applications of instrumental techniques such as calorimetry, chromatography, lasers, and optical spectroscopy in modern chemistry, along with techniques for the analysis and interpretation of experimental data. It is intended mainly for third year students. The accompanying laboratory includes experiments with these methods and emphasizes experimental design, data interpretation, and the presentation of results in written and oral formats.

Credits: 4

CHEM556101  
*Principles and Methods in Biophysical Chemistry*  
Zhou, Huiqing  
*Spring 2024*  
This course is an introduction to the key principles and experimental methods of contemporary biophysics and biophysical chemistry. The course primarily discusses the structures and dynamics of biomolecules (such as nucleic acids and proteins), including the biophysical principles and measurements for biomolecular folding/unfolding, as well as determination of biomolecular structure and dynamics by methods such as X-ray crystallography, cryogenic electron microscopy, and Nuclear Magnetic Resonance spectroscopy. Critical evaluations of determined structures by selected methods and applications of structural biology will be emphasized. The course will also cover principles and methods for determining ligand binding to biological macromolecules.

**Credits:** 3  
**Room and Schedule:** Campion Hall 231 TuTh 10:30AM-11:45AM  
**Satisfies Core Requirement:** None  
**Prerequisites:** CHEM4461 or CHEM4465 or BIOL4350 or equivalent; a physical chemistry course is recommended

CHEM557501  
*Introduction to Spectroscopy*  
Huang, Jier  
*Spring 2024*
Broadly defined, spectroscopy is the study of the interaction of electromagnetic radiation with matter. For the chemist, spectroscopy is a powerful tool for determining molecular structure and dynamics. This course will focus on the techniques most applied in chemistry including rotational, vibrational and electronic spectroscopy. The topics to be covered include light-matter interaction, group theory and various types of spectroscopy techniques. The student will gain familiarity with the basic principles and methods of spectroscopy, be able to discuss the information gleaned from each type of spectroscopic method, and become proficient in the application of group theoretical methods to determine transition selection rules.

**Credits:** 3  
**Room and Schedule:** Merkert Chemistry Center 129 TuTh 01:30PM-02:45PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** A course in quantum chemistry such as CHEM4476 Physical Chemistry II. Undergraduate students must obtain the permission of the instructor.

---

**CHEM558101**  
**Solid State Chemistry**  
**Grimaud, Alexis**  
**Spring 2024**  
An introduction to solid state chemistry, a branch of chemistry that is concerned with the synthesis, structure, properties, and applications of solid materials. We will cover concepts such as crystal structures, defects and diffusion properties, bonding in solids, crystal field theory, energy bands and varied electronic behavior shown by solids. Emerging directions in solid state chemistry, including electrochemical storage devices, will be discussed as well.

**Credits:** 3  
**Room and Schedule:** Campion Hall 231 TuTh 03:00PM-04:15PM  
**Satisfies Core Requirement:** None  
**Prerequisites:** CHEM4475 is a pre-requisite.CHEM3322 and CHEM4476 are pre- or co-requisites.

CHEM559801
Advanced Research in Biochemistry II
Chatterjee, Abhishek
Spring 2024
Seniors only. Arrangement with an individual faculty member and departmental permission is required. This is a two-semester course and may not be taken for only one semester. A substantial independent research project performed under the supervision of a faculty member. Seniors whose projects are judged by the department to be of the highest quality, and who maintain a minimum GPA of 3.70, will be nominated for Scholar of the College recognition.

CHEM661101
Scientific Communication in Chemistry
Liu, Shih-Yuan
Spring 2024
This course seeks to best facilitate the transition of incoming graduate students to successful researchers in chemistry. Specifically, students in this course will practice and improve on various communication skills including scientific presentations, as well as writing articles and proposals. Ethics and social responsibilities of performing chemical research will also be discussed.

Classical Studies Courses: Summer 2023

CLAS102301
Summer Elementary Ancient Greek
Sutherland, Elizabeth H
Summer 2023
The goal of this course is to build solid reading skills in ancient Greek language by providing an intensive and comprehensive introduction to the basics of Greek grammar and syntax. The course meets for twelve weeks and is divided into two sessions. The first session will begin to guide students through the fundamentals of the language using Hansen and Quinn, Greek An Intensive Course. The second session will complete Hansen and Quinn and proceed to readings in the original.

CLAS170101
Death in Ancient Greece: Achilles to Alexander the Great
Eisenfeld, Hanne E
Fall 2023
Core Renewal Course: Enduring Questions In ancient Greece, death played a starring role in epic poetry and on the tragic and comic stage, funerary monuments lined the roadways, and dead heroes and family members alike were believed to intervene in the affairs of the living. Beginning with the "funeral mask of Agamemnon" and ending with royal Macedonian tombs, this course examines how ancient Greek responses to death addressed the universal problem of mortality while simultaneously using death as a lens for thinking about contemporary problems. We will consider throughout how the ancient materials resonate differently -- or not -- for us today.

Credits: 3
Room and Schedule: Stokes Hall 107S TuTh 10:30AM-11:45AM
Satisfies Core Requirement: History I
Prerequisites: None

Death in Russian Literature: Heroes, Cowards, Humans  
Epstein, Thomas  
Fall 2023
Core Renewal Course: Enduring Questions Russian literature has always had an affinity for narratives depicting the meaning(s) of death. Reading from its first great modern writer (Pushkin) to its latest Nobel Prize winner (Svetlana Alexeivitch), our course will investigate three primary representations of death in Russian literature: heroization of death (sacrifice and death as the condition of a good life); banalization of death (death as meaninglessness); demonization of death (death as sin; death that must be overcome). Throughout we will attempt to understand how the ways in which we conceive of death inform the ways we choose to live.

Credits: 3
Room and Schedule: Stokes Hall 205S MW 03:00PM-04:15PM
Satisfies Core Requirement: Literature
Prerequisites: None
Corequisites: Must be concurrently enrolled in CLAS1701

CLAS220501
Greek History
Thatcher, Mark R
Fall 2023
A study of the history of Greece from the Bronze Age in the second millennium BCE to the preeminence of Alexander of Macedon in the 4th century. The course will focus on such broad topics as the development of Greek social and political institutions, notions of justice, freedom, and Greek identity, relations among Greek city-states and with foreign nations, imperialism, the golden age of Greek literature, and the rise of Macedonian monarchy. Emphasis will be on the study of the ancient sources: literary, historiographic, archaeological, and epigraphic.

Credits: 3
Room and Schedule: Gasson Hall 305 MWF 11:00AM-11:50AM
Satisfies Core Requirement: History I
Prerequisites: None
**CLAS221001**  
Romantic Spectacles  
Polt, Christopher B  
Fall 2023  
Rome overflowed with spectacle: theatrical shows and gladiatorial combats, chariot races and military parades, animal hunts and funeral processions, ritual sacrifices and Christian martyrdoms. In this course we will explore what public spectacles looked like in Rome and why they were ubiquitous sights in the ancient world, paying special attention to: who produced public spectacles and what benefits they derived from them, tangible or otherwise; how spectators responded to and participated in such events; and how spectacular displays reinforced and/or challenged social norms and traditional values, both individually and for society at large. Students will have hands-on opportunities to reconstruct and perform select spectacles in order to reflect on the ancient and modern experience of spectacular public display.

**CLAS223001**  
Classical Mythology  
Eisenfeld, Hanne E  
Fall 2023
This course explores the mythology of ancient Greece, Rome, and the Near East within its cultural, political, historical, and religious contexts. You will meet (or renew your acquaintance with) mythical figures like Zeus, Gilgamesh, Medusa, and Helen as they appear in multiple literary genres and other artistic media. In order to analyze and interrogate these myths we will use ancient and modern frameworks for thinking about what mythology is and what it does. What can a myth tell us about the civilization that created, adopted, or adapted it? What do our uses of Classical mythology--and our creations of our own myths--tell us about ourselves?

CLAS223601
Roman Law and Family
Eshleman, Kendra J
Fall 2023
We will look at the makeup and dynamics of the Roman household through legal sources, which allow investigation of Roman legal arguments and approaches to issues such as marriage, dowry, divorce, disciplining children, adultery, procreation, adoption, and women's rights, and the role of the pater familias. We will also observe similarities and differences between Roman family law and modern American family law. By the end of the course you will have gained a better understanding not only of the Roman family but also of how societies--including our own--use law to order and regulate family relationships.

CLAS232001
From Sappho to Stonewall Landmarks of Gay History
Mormando, Franco A
Fall 2023
An introductory survey of some of the most important moments, figures, debates, and texts in the history of same-sex desire and behavior in the West (Europe and the USA). The course will span the centuries from classical antiquity all the way to, and including, the watershed event of the NYC Stonewall Uprising of 1969, often seen as marking the effective launch of the modern gay rights movement. We will chart the ever-evolving understanding of same-sex desire and behavior on the part of both legal, medical, and religious authorities as well as the private individuals living that reality. Also examined will be the justifications given by church and state for the persecution of gay people over the centuries, as well as the attempts by gay people to fight against that persecution. Our evidence will embrace a wide variety of primary sources, both textual and visual (film and art).

CLAS330201
Greek Rhetoric
Thatcher, Mark R
Fall 2023
The class will explore the theory and practice of classical Greek rhetoric. From Homer onward, persuasive speech occupied a central place in Greek political and cultural life, and Greeks were the first western theorists of how and why verbal persuasion works. We will read works by early Greek orators Gorgias, Antiphon, and Lysias in Greek, along with ancient discussions of rhetorical composition and critiques of rhetoric in English. We will focus on the construction and contexts of Greek oratory and on the social-historical issues illuminated by the speeches themselves.

**CLAS333301**  
**Apuleius**  
**Eshleman, Kendra J**  
**Fall 2023**  
Apuleius' "Metamorphoses" (aka the "Golden Ass") is the only ancient Latin novel to survive complete, an exploration of the dark underbelly of Roman imperial society, sex, violence, slavery, witchcraft, banditry, and unholy curiosity. In this course, we will read in Latin all of book three, and large sections of the novella that occupies the center of the work, the "Cupid" and "Psyche." In addition, we will read the entire novel in English.

Ovid was one of Rome's literary rockstars, but he was also banished by the emperor Augustus for, according to him, "a poem and a mistake." In this course, we will explore Ovid's famously impish relationship with Rome's ancestral customs and the new Augustan regime, examining how Roman writers and politicians conveyed and contested national identity--sometimes cooperatively, sometimes uneasily, and sometimes in outright conflict. We will read in Latin primarily Ovid's Fasti--a poem ostensibly about the Roman calendar, but also so much more--supplemented with Latin readings of other relevant works of Augustan poetry.

A political and cultural history of Athens during the creation and height of its democracy (circa 480-400 B.C.E.). The course will consider the Persian Wars and their effect on political and constitutional developments in Athens, the workings of the Athenian Democracy under Pericles, and the eventual collapse following the Peloponnesian War. Readings in translation include Thucydides, Plutarch, Aristotle, Xenophon, Plato, and the Greek playwrights (Aeschylus, Sophocles, Euripides, and Aristophanes). Emphasis will be on integrating historical, literary, and archaeological evidence to provide as complete a picture as possible of this dynamic period of ancient history.

**CLAS160401**  
**Perspectives on Art: Techniques and Technology**  
**Epstein, Thomas**  
**Spring 2024**
How does the experience of art contribute to a life of purpose and meaning? What do the various forms of art have in common, and how do they differ? What practices and habits constitute meaningful engagement with art? How have aesthetic values and concepts transformed throughout history? What is the nature of artistic creation, and how is it shaped by shifting understandings of the human person? What role does art play in the formation of the values and principles, now and at other times and places? Over the course of the year, these and other enduring questions about art will be addressed by four connected courses: a year-long philosophy course, paired with a literature course in one semester, and an art course in the other. Approaching shared questions from these different perspectives will disclose not only the limits of each perspective, but also the ways in which each perspective serves to supplement and transform the others. The result will be not only a wider and deeper understanding of art, but also growth in the capacity for aesthetic experience.

Art and Myth in Ancient Greece
Hoffman, Gail L
Spring 2024
An introduction to the visual representation of the Greek gods and goddesses and to the artistic depiction of the primary cycles of Greek legends (e.g., the Trojan War and heroes such as Herakles, Perseus, and Theseus). This course focuses on how specific visual attributes serve to identify mythological characters and how the development of narrative in Greek art helped to relate their stories. Inquiring into the use of mythological imagery to decorate temples, cult statues, and vases used primarily for the symposium (male drinking parties), we will consider the functions of mythological imagery within Greek society.

CLAS222501
Ancient Medicine
Eshleman, Kendra J
Spring 2024
This course introduces students to the practice and theory of medicine in ancient Greece and Rome, from the archaic world of Homer (eighth century BCE) to late antiquity and early Christian healing practices. Themes will include shifting understandings of health and the body, revolutions in knowledge of human anatomy and physiology, ethical controversies over human and animal dissection, influential theories of pathology, psychology, pharmacology, and nutrition, the intersection of medicine and religion, and ancient ideas about doctors' responsibility, which, via the Hippocratic Oath, are still with us today. Students interested in history and literature will gain a richer sense of the importance of medicine in ancient society, and its connections to religion, magic and philosophy. Students from a medical and scientific background will discover how perceptions of the body have changed over time and from culture to culture.

**The City of Rome**  
**Polt, Christopher B**  
**Spring 2024**  
What was a normal day like for ancient Romans? What did they see, hear, and do while going about their lives? How did those things change as Rome shifted from a Republic to an Empire and as their city became caput mundi ("Head of the World")? In this course we will reconstruct the lived experiences of Romans by examining Rome's urban spaces through art, architecture, artifacts, and texts. Along the way, we will explore: public buildings, mundane and monumental; recreation (baths, theaters, arenas); civic infrastructure (aqueducts, sewers, roads); economy and commerce (shopping, harbors, slavery); gender and sexuality (domestic spaces, brothels); religion (temples, sacrifices, funerals); and other topics as appropriate.

CLAS332501
Lucretius
Polt, Christopher B
Spring 2024
The Roman poet Lucretius is one of the key figures in the history of Western philosophy, expounding in his work De Rerum Natura (On the Nature of Things) upon the primary tenets of Epicurean thought. In this course we will read selections from De Rerum Natura in Latin, aiming to acquire a greater knowledge of Latin grammar and vocabulary and to improve facility in reading Latin poetry. We will use Lucretius poem as a focal point to explore ancient Epicureanism, its views on human ethics and the workings of the physical world, its place within ancient philosophy more broadly, and its continuing relevance for modern thought.

Tacitus
Eshleman, Kendra J
Spring 2024
A reading of the Nero books of Tacitus' Annals in Latin, accompanied by an investigation of Roman historiography and the history and culture of the Age of Nero. Much of our attention will be given to unpacking Tacitus brilliant, but notoriously thorny, Latin, but we will also explore central issues of these books: the history and culture of the age of Nero; the nature of the Julio-Claudian principate, the relation between principatus and libertas, the distortions of political language, and the dilemma of how to be live justly in an autocratic state; and the methods and rhetoric of Tacitean historiography.

Ancient Sicily, the crossroads of the Mediterranean, was a melting pot where Greeks, Romans, Carthaginians, and indigenous peoples came together to create something new. This course explores the history, art, literature, and culture of the Sicilian Greeks (and to some extent non-Greeks) from the 8th to 3rd centuries BCE. We will analyze the primary sources that tell us about ancient Sicily, engage with cutting-edge scholarship on major historical questions, and develop techniques and resources for research in Classics.

Crisis Communication
Fishman, Donald A
Summer 2023
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.. This course is designed to examine events and situations that potentially threaten the viability of an organization. Attention is devoted to developing an effective crisis communication plan, speaking to multiple stakeholders, decision-making under pressure, and resolving--rather than litigating--organizational problems. Among the studies examined are the Tylenol product tampering incident, the Exxon Valdez accident, the Union Carbide gas leak, the Challenger Space Shuttle disaster, the Three Mile Island accident, and the Pepsi syringe hoax.

COMM102001
Survey of Mass Communication
Hogan, Lindsay R
Fall 2023
Required course for all Communication majors. This course will introduce you to the basics of the field, including industries, industry trends, regulations, and ethics. It will address historical developments that have shaped the mass media, particularly through the rise of newspaper, book, music, radio, television, film, advertising, and public relations industries. It will consider the influences of new media and their impacts on culture and industry. It will explore topics such as blockbusters, globalization, digital photography, social media, sports, "fake news," fans and fan cultures, and media violence. Further, it will ask you to consider your position as a media consumer.

COMM106001
Anti-Social Media
Hartnett, Kristin A
Fall 2023

Do you ever wonder what toll social media might be taking on your mental health? Do you long to 'break up' with your phone and live in the moment? This one-credit (pass-fail) seminar examines student anxieties about technology habits and experiments with practices of mindfulness. The course orients you to think and act more purposefully as a 'whole person'--in keeping with the Jesuit ideals of attentiveness and character formation--as opposed to one who is screen-dependent. Short readings, fun viewings, meditative journal entries, and small-class discussions will focus on the social, psychological, and emotional consequences of digital experiences (including friendships, learning, privacy, dating, and so on). Students will also set one #goal per month, of their own choosing, to try to live differently with their tech habits--self-examining how that change feels and what insights emerge.

COMM106201
Spiritual, but Not Religious, Meaning Making in Media and Culture
Peterson, Kristin M
Fall 2023
When asked to identify their religion, younger generations of Americans increasingly identify as "non" or "unaffiliated." At the same time, young people appear to be pursuing deeper meaning through practices like hiking pilgrimages, joining exercise communities like SoulCycle and CrossFit, reading Harry Potter books as sacred texts, meditating to mindfulness apps, following the latest wellness fad promoted by celebrity gurus, sharing inspirational astrology quotes on Instagram, and participating in digital detox retreats. This one credit course will use digital media and cultural spaces as the main sites to explore the various ways young Americans still remain religious in their pursuit of spirit significance and intimate connections with others. Students will read contemporary reflections, both academic and popular, on these emerging practices while they will also engage with these media spaces in their daily lives in order to reflect on the shifting ways that "religious nones" seek meaning and connections in their daily lives.

**Digital Storytelling**  
**Reynolds, Paul A**  
**Fall 2023**  
Storytelling is an essential part of every community, organization, and business. However, the channels through which stories are told have evolved. With the advent of the internet, digital media now combines tradition with technology. Narratives can be told in new, multidimensional ways with video, audio, blogs, text, images, and graphics. The purpose of this course is to help you understand why communication professionals and, moreover, civilizations throughout human history create and value stories. You will also learn how to employ a variety of digital technologies to create compelling content. This will be achieved through examining the underlying concepts and technical processes involved in telling stories for delivery on the desktop, the mobile device or tablet. This is a one-credit pass/fail course.

Introduction to Feminisms
Barko, Emily B
Fall 2023
Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

**Black Popular Culture**  
**Kizito, Kalemba**  
**Fall 2023**  
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In this class, we will critically examine the development of black popular culture from blackface minstrelsy in the 1800s to present day. While we will primarily focus on black popular culture in the United States, we will also consider the work of diasporic authors and artists and the international implications of American media. Readings will draw upon theories and concepts in media studies, cultural studies, and rhetoric to center our discussion of black popular cultural texts such as television shows, films, music, poetry, and fashion.

Sports, Media, Culture
Serazio, Michael J
Fall 2023
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

COMM220401  
**Digital Media Fundamentals**  
Ngai, Tsz Lam  
**Fall 2023**  
This class explores the technologies and infrastructures of digital media and considers their broader social implications. We will review several key digital media theories and manipulate code and platforms to examine the relationship between formats and contents critically. Our goal is to provide you with both the practical skills and critical language to manage various forms of digital media, including websites, video games, AI chatbots, and social media. Although some topics are technical, no prior technical knowledge is needed. This course counts as Communication elective.

COMM221201
Fascist Rhetoric and Representation
Ingram, Brett D
Fall 2023
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. This course will interrogate the rhetoric and aesthetics of fascism as a system of governmentality and as a mentality, both of which are characterized by a desire for dictatorial control, the forcible suppression of opposing positions and perspectives, and a preoccupation with rigidly defined hierarchies of power and privilege. We will survey the origins of fascism in the 20th century Europe, as embodied in political leaders such as Mussolini, Hitler, and Stalin, with particular focus on the ways in fascist ideology was disseminated and absorbed through the production and consumption of popular culture. We will then turn to contemporary manifestations of neo-fascism, including the recent rise of ethno-nationalist groups in America

Digital Media Field Production
Howley, Richard J
Fall 2023
Satisfies one of three electives required for the Communication major. With the ubiquitous nature of video streaming on desktops, mobile phones and tablets, the influence of video storytelling has never been greater or more pervasive and the demand for skilled digital storytellers to fill those increasingly ubiquitous screens is stronger than ever. This course offers professional guidance and hands-on experience to develop the skills, techniques and disciplines necessary for the creation of digital media produced in the field. Students will write and produce their own video programs, becoming familiar with all aspects of production and post-production, including producing, performing, directing, single-camera shooting, sound recording, and location lighting, as well as editing, digital effects, and graphics. In the process, students will develop a discerning eye for what makes an effective, professional, aesthetically pleasing video production, while they build a portfolio that can be used during job or graduate program interviews.

COMM222201
Studio Television Production
Reynolds, Paul A
Fall 2023
Satisfies one of three elective courses required within the Communication major. This course is designed to introduce students to the theories, tools, and techniques of television production. The focus of this class is on developing the production skills necessary for creating effective television communication. To pursue this goal, students will combine the information from the course's texts with practical experience in the form of exercises and the creation of their own television programs. While producing and directing their programs, students, working in crews, will learn to operate studio television equipment and develop an understanding of how messages are communicated using "live" or "life-on-tape" production methods.

**COMM222401**

The Ideal of the Open Mind

Ingram, Brett D

Fall 2023
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In an age of polarized politics, it is immensely difficult to keep an open mind in public debate. Convinced that our side is right and the other wrong, we readily retreat to our respective corners, rally our allies, and prepare to outvote or shout down our opponents. But insofar as we remain committed to democratic deliberation, we must try to understand our fellow citizens and make the attempt to persuade them. To bring our fellow citizens around to our way of seeing things, we have to first understand where they're coming from, which means keeping an open mind. In this course, we will address the meaning of the open mind as it bears upon political rhetoric and communication, moral debate, and the study of culture. Questions we will address include: is political rhetoric invariably a form of manipulation and deceit, or is it a way of persuading people by appealing to them from within their own perspectives? Can tradition be a source for reform? To what extent have the most radical reforms in American history drawn upon tradition versus left tradition behind? To address these questions, we will examine and assess the ideal of the open mind as it has emerged in the Western philosophical tradition from Plato and Aristotle to the present.

**Political Communication: Latin America's Public Sphere**  
**Livon-Grosman, Ernesto**  
**Fall 2023**
Through a combination of printed and audiovisual materials this course will study the ways in which Latin America's public sphere becomes the meeting point of the political establishment as well as its counter culture. Centered in the twentieth and twenty-first centuries the course will pay special attention to today's renewed concerned for the relation between art and politics, and in particular to the idea of politics as representation in the Latin American context. How are those representations shaped by always changing social circumstances? What do they tell us about Latin America's past and present political realities? We will watch and analyze multimedia productions, read texts, and discuss visual representations from a variety of Latin American sources. Class and readings in English, audiovisual materials with English subtitles.

**Covering Sports in the Digital Age**

**Cotillo, Christopher G**

**Fall 2023**

Satisfies one of three elective courses required within the Communication major. This course will introduce students to the theoretical and practical elements of covering sports in the age of digital media convergence. Taught by an experienced practitioner, the class will both review the history of sports media and offer students the opportunity to produce original creative work suited for online distribution. Topics will include journalistic ethics, social media strategies, social justice in sports coverage, and the practicalities of reporting and story construction. Students will be evaluated both via exams and through the submission of a creative portfolio.

Theory, History and Practice of Talk Media
Citorik, Christopher
Fall 2023
Satisfies one of three elective courses required within the Communication major. This course offers an overview of the historical, theoretical, and practical elements of American talk media from the dawn of broadcasting to today. Beginning with early U.S. radio, the class considers the ways in which economics, politics, technology, and culture have shaped American public discourse. The course concludes by giving students an opportunity to produce their own podcast, teaching skills that will allow them to not only create professional content, but also to understand better the communication history and theory they have studied throughout the semester.

COMM227202
New Media and Society
Breen, Marcus J
Fall 2023
Satisfies one of three elective courses required within the Communication major. This course surveys and explores new media and interactive communication technologies from a historical and critical perspective. Course content includes theories that explain contemporary social and economic formations influencing the emergence of the Internet and digital applications, including: convergence of user communities, film and television and mediated communication, post-human approaches, computer games, virtual reality, robotics, social media, militarization, business concerns and public policy debates. The course offers students the opportunity to analyze and reflect on research about the impact of media, especially the implications of digital innovations for society.

COMM227801
Social Media
Jang, Seung M
Fall 2023
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. This course is designed to develop an understanding of social media in the digital era. Students will critically interpret social media practices through various themes, theories, and concepts such as networked communities, self-expression, big data, privacy, filter bubbles, algorithms, activism, co-op platforms, and trolling. They will also learn about the history of the foremost social media platforms and the political and economic forces behind social media, such as corporate ownership, government regulation, surveillance, and marketing. Students will learn to think critically about the interconnections between social media, culture, economics, politics, and the pursuit of social justice.

COMM228501
Cultural Diversity in Media
Wells, Celeste C
Fall 2023
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In an age where the world's political borders are changing rapidly, cultural artifacts found in mass communication become increasingly important. This course examines the relationship of culture and the mass media in creating a new concept of America, based on race, ethnicity and gender. From this exploration, students will be able to critique the impact of television, radio, film, cartoons, newspapers, magazines, books and the music industry on cultural perception.

Credits: 3
Room and Schedule: Stokes Hall 301N TuTh 10:30AM-11:45AM
Satisfies Core Requirement: Cultural Diversity

COMM336201
Film Theory and Criticism
Pastel, Renee L
Fall 2023
Satisfies the required theory course in the Communication major. This course is structured around the question of how visual media convey and influence the world in which they are created. By surveying some of the major questions raised by theorists from the beginnings of film as a medium to the present, students will gain critical lenses through which to historically and theoretically engage visual media. We will cover topics including: film aesthetics; Marxist, psychoanalytic, feminist, critical race, and queer theoretical approaches to film criticism; television studies; and new media theories. Students will learn how to analyze film on a formal level, taking into account how form creates meaning, and to think historically and theoretically about how film as art and commerce has contributed to shaping "smaller screen" media forms and understandings.

COMM337801
Critical Theory
Ingram, Brett D
Fall 2023
Satisfies the required theory course in the Communication major. This course investigates and critiques the many ways that social, cultural, and political power is consolidated, negotiated, or resisted through popular media. We will read an assortment of theoretical approaches and primary texts (including those drawing from Marxist, ritual, semiotic, psychoanalytic, and functionalist traditions, among others) and apply them to ideological norms in society surrounding gender, race, class, violence, and the body. Looking at both the structural constraints in the production process of advertising, television, film, and social media, and the interpretive agency of audiences, our targets for analysis will be wide-ranging and contemporary.

COMM442901
Globalization and the Media
Tran, Anthony D
Fall 2023
Satisfies one of two writing intensive courses required within the Communication major.
Restricted to Juniors and Seniors. This class examines the cultural impact of globalization on the
traditional centers and peripheries of media production. The course will cover topics such as the
shifting definitions of cultural imperialism; the role of the United Nations in regulating cultural
products; the latest transnational media mergers; the strategies of global television
programmers such as CNN, MTV, or Discovery; the increasing commercialization of media
systems around the world; and the role of media in relation to war and terrorism. This writing-
intensive seminar is open to juniors and seniors.

COMM444301
Seeing God and Hearing Ghosts: Spirituality in US Media
Peterson, Kristin M
Fall 2023
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. This writing intensive course will explore the intimate connections between the development of media technologies and the emergence of religious movements in the U.S. Emphasizing the unique relationship of religion and media in American public life, this course will focus on how the disestablishment of religion creates a competitive marketplace in which religions engage with new media technologies to make meaning, maintain community connections, and reach new members. Students will examine how the development of new media technologies presents both opportunities and challenges to various religious groups in the U.S. Cases to be discussed in the class include: how access to mass printing technologies enables publications and sacred texts from emerging religious groups like the Church of Jesus Christ of Latter-Day Saints, the Nation of Islam, and the Jehovah's Witnesses; how radio waves and photography influenced the popularity of spiritualism after the Civil War; how cable networks provided the opportunity for Evangelical Christians to ascend to the center of American public life; or how social media create space for young Muslim Americans to express their faith in contrast to mainstream media stereotypes.

COMM444601
Critical News Studies
Sears, Anne, Phd
Fall 2023
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.

What is news? We will examine the deceptively simple question, paying attention to historical shifts in news organizations, journalistic practice and process, technological forms and sociocultural patterns. We will dissect visual and textual features of news, consider how events become newsworthy, analyze journalistic work routines, identify framing devices, public agendas, editorial power and audience relationships. Topics include climate change, immigration, mass violence and representation. Studying how news works and model of how it can be made differently gives us a guide for navigating news in our personal and professional lives.

Crisis Communication
Fishman, Donald A
Fall 2023
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors.. This course is designed to examine events and situations that potentially threaten the viability of an organization. Attention is devoted to developing an effective crisis communication plan, speaking to multiple stakeholders, decision-making under pressure, and resolving--rather than litigating--organizational problems. Among the studies examined are the Tylenol product tampering incident, the Exxon Valdez accident, the Union Carbide gas leak, the Challenger Space Shuttle disaster, the Three Mile Island accident, and the Pepsi syringe hoax.

Gender Representation and Communication
Cuklanz, Lisa M
Fall 2023
Satisfies one of two writing intensive course requirements within the Communication major. Restricted to Juniors and Seniors. This course is both a writing-intensive seminar and a Women's and Gender Studies minor course. Focus is on the social construction of gender through communication. The early section of the course compares historical and theoretical approaches to representations of gender in communication texts. Then, building on these comparisons, students read about, examine, and analyze texts, focusing particularly on television programming and advertising.

Film, Video and Everyday Life
Berger, Kenneth
Fall 2023
This course satisfies one of two writing intensives required within the Communication major. Restricted to Juniors and Seniors. This course will examine how film and video have been used to depict, confront, contest and reimagine everyday life over the last century. Beginning with early cinema and proceeding chronologically, we will look at various forms of moving image production, including documentary, Hollywood narrative, experimental film and video, live television, animation, and new media. As we do, we will supplement our analysis with different accounts of modern and contemporary life, concentrating in particular on theories that foreground the cultural and political forces that influence and mediate social existence. In turn, we will attempt to develop a critical and historical framework for understanding the diverse ways that film, video, and related media reflect, reshape, challenge, or otherwise respond to the conditions and experiences that define everyday life.

Surveillance, Media and Contemporary Society
Kizito, Kalemba
Fall 2023
What is surveillance and how are surveillance technologies altering contemporary life? This course will explore this question by mapping the complex ways that media and digital technologies are used to acculturate us and generate acquiescence/resistance to surveillance in society. We will use film, television, and Internet media along with assigned readings to develop critical perspectives on surveillance and surveillance practices. The class is designed to give you freedom to develop and express your own ideas on the costs and potential benefits of surveillance-based societies. **This course satisfies one of two writing intensive courses required within the Communication Major.**

COMM558901
Internship Practicum
Caswell, Christine A
Fall 2023
This course may not be repeated. Satisfies one of three elective courses required within the Communication major. This course gives Communication majors with junior or senior standing an opportunity to pursue a 15-20 hour per week internship in a specific field of Communication. Practical experience will be supplemented by discussions of relevant theoretical constructs. Periodic discussion group seminars will enhance a student's immersion in the industry. Adherence to professional protocol is expected. A field research paper is required as well as supervisor evaluations. This course counts as a 3-credit Communication elective. Instructor permission is required for enrollment. This course may also count for LSEHD students' required practicum; permission from Dean DeVoy is required for LSEHD students.

**Communication Courses: Spring 2024**

**COMM101001**

**The Rhetorical Tradition**

**Wells, Celeste C**

**Spring 2024**

Required course for all Communication majors. This is an introductory course that is designed to examine the classical periods of rhetoric, as well as the Enlightenment and modern periods. The course focuses on pivotal concepts in rhetoric and their application to contemporary discourse. This is a foundation course in the field of communication. It introduces students to perennial issues and concerns in rhetoric and looks at communication as a way of knowing about self and society.

**Credits:** 3

**Room and Schedule:** Fulton Hall 511 (Auditorium) TuTh 09:00AM-10:15AM

**Satisfies Core Requirement:** None

Required course for all Communication majors. This course will introduce you to the basics of the field, including industries, industry trends, regulations, and ethics. It will address historical developments that have shaped the mass media, particularly through the rise of newspaper, book, music, radio, television, film, advertising, and public relations industries. It will consider the influences of new media and their impacts on culture and industry. It will explore topics such as blockbusters, globalization, digital photography, social media, sports, "fake news," fans and fan cultures, and media violence. Further, it will ask you to consider your position as a media consumer.

COMM105001
Translating Theory to Practice
Hogan, Lindsay R
Spring 2024
This is a one-credit Pass/Fall course. As a Communication student at Boston College you have been, and will continue to be, provided with numerous opportunities to learn about communication at both theoretical and practical levels in multiple areas within our discipline (e.g., media, rhetoric, culture, gender, health, interpersonal, family). The objective of this course is to assist you in discerning how your education in the field of communication will prepare you to ask and eventually answer questions about your life, vocation, and role in the lives of others. Each week, a Communication department faculty member or guest speaker from the professional world will address a topic relevant to students on the precipice of entering the workforce, including (but not limited to): how to discuss academic research in language that resonates with employers in fields such as public advocacy, broadcasting, advertising, public relations, and consulting; whether/how to pursue graduate study; and how to present your self in job applications and interviews.

**COMM106001**  
**Anti-Social Media**  
**Serazio, Michael J**  
**Spring 2024**
Do you ever wonder what toll social media might be taking on your mental health? Do you long to 'break up' with your phone and live in the moment? This one-credit (pass-fail) seminar examines student anxieties about technology habits and experiments with practices of mindfulness. The course orients you to think and act more purposefully as a 'whole person'--in keeping with the Jesuit ideals of attentiveness and character formation--as opposed to one who is screen-dependent. Short readings, fun viewings, meditative journal entries, and small-class discussions will focus on the social, psychological, and emotional consequences of digital experiences (including friendships, learning, privacy, dating, and so on). Students will also set one #goal per month, of their own choosing, to try to live differently with their tech habits--self-examining how that change feels and what insights emerge.

**Credits:** 1

COMM106601
Communicating Jewish Identity
Sienkiewicz, Matthew S
Spring 2024
This is a one-credit pass/fail course. This one-credit pass/fail course gives students the opportunity to learn about and discuss a variety of approaches to Jewish Identity. Topics will include religious practice, secular movements, antisemitism, Israel, and more. Course materials will range from scholarly studies to popular literature to personal reflections. Students enrolled in the course are expected to read and actively discuss the material each week in order to receive credit.

COMM106701
Culture Industry and Popular Music
Erol, Ali Ersen
Spring 2024
This is a one-credit pass/fail course. This course examines the contributions and impacts of popular music artists to the US culture, as well as the ways in which media operates globally. More specifically, we will examine issues such as constructions of gender, sexuality, class, fandom, and romance in music, as well as the productions of authenticity, social media engagement, business acumen, and media portrayals of pop stars. We will analyze music videos and lyrics for markers of affect, we will scrutinize the intersection of artistry and entrepreneurship, and we will explore what it means to grow with celebrities.

COMM212501
Introduction to Feminisms
Barko, Emily B
Spring 2024
Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

----------------------------------

COMM218001
Masculinity, Sexuality, and Difference
Ingram, Brett D
Spring 2024
Satisfies Critical Issues Course requirement for the class of 2021 and beyond. This course will examine constructions of masculinity and sexuality in Western society from a critical cultural perspective. We will consider the ways in which cultural narratives about acceptable masculine behaviors and attitudes catalyze social conflicts, reinforce established power hierarchies, and organize the modes of being available to people of different gender identities and sexual orientations. We will also evaluate the liberatory potential of emergent discourses and practices that seek to cultivate greater acceptance of diversity, and promote social healing. There will be a concentrated focus on popular cultural forms (especially television, film, music, sports, and social media) that are particularly influential to contemporary men and boys.

Credits: 3
Room and Schedule: Gasson Hall 305 TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
COMM218101
Gender, Identity, and Sexuality
Barko, Emily B
Spring 2024
Satisfies one of four elective courses required within the Communication major. This course offers an introduction to gender and sexuality studies, as a foundation to explore how the relationships between our personal biographies and the wider forces in society affect our lives and the lives of others. Employing an interdisciplinary approach to scholarship, we utilize a variety of academic and popular cultural resources to analyze how gender, sexuality, and identity are learned, embodied, and renegotiated in everyday life. Underscoring the influence of media on social norms, we investigate how our identities are dynamically shaped by individual, interactional, and institutional sociocultural domains. With emphasis given to intersections of race, class, gender, sexuality, religion, and ethnicity, we consider how our positionalities are socially constructed, with consequent effects.

COMM218401
Sports, Media, Culture
Kim, Kyoung-yim
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. Sports have long played a vital yet complex role in culture and this course examines that intersection of sports, the mass media, and society. We will appraise and debate the ways in which sports are functional or problematic in their impact on and relationship to players, fans, journalists, co-cultural groups, and nations. Students will read both scholarly and journalistic reflections, view popular and documentary film, and analyze fan experiences, mediated presentations, and critical social issues. In short, we will go beyond the box score to understand the importance and deconstruct the hype that accompanies modern sports.

COMM220301
Image as Communication
Livon-Grosman, Ernesto
Spring 2024
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. The goal of this course is to study how images are formed while exploring the ways in which they are being used to communicate. Following the critical tradition that treats images as a static representation all the way to recent studies that focus on writing with images in the era of interactive media, we will read critical texts while exploring concrete examples taken from books, political posters, films, and social media. What is the relation between text and image? What are the politics of image making? How do images change through different national and cultural settings? And how does the materiality of images define the way we make sense of them? From Walter Benjamin, John Berger, Malcolm Turvey to Noigandres and Laura Mulvey to Harun Farocki we will try to answer some of these questions while looking at concrete examples. We will watch and analyze multimedia productions, read texts, and discuss visual representations from a variety of visual and textual sources. Class and readings in English, audiovisual materials in English and/or with English subtitles.

COMM221301
Fundamentals of Audio I
Schwartz, Judith E
Spring 2024
Satisfies one of three elective courses required within the Communication major. This course is designed to introduce the student to the multifaceted world of sound, in theory and practice. Topics covered include the history of recording techniques, design and use of microphones, and careful listening techniques. The course will present an overview of current audio production software typically used in modern recording studios. Students will work in the audio labs to create professional quality pieces and will take home a portfolio of work at the end of the semester.

COMM221302

**Fundamentals of Audio I**

**Schwartz, Judith E**

**Spring 2024**

Satisfies one of three elective courses required within the Communication major. This course is designed to introduce the student to the multifaceted world of sound, in theory and practice. Topics covered include the history of recording techniques, design and use of microphones, and careful listening techniques. The course will present an overview of current audio production software typically used in modern recording studios. Students will work in the audio labs to create professional quality pieces and will take home a portfolio of work at the end of the semester.

COMM222201
Studio Television Production
Howley, Richard J
Spring 2024
Satisfies one of three elective courses required within the Communication major. This course is designed to introduce students to the theories, tools, and techniques of television production. The focus of this class is on developing the production skills necessary for creating effective television communication. To pursue this goal, students will combine the information from the course's texts with practical experience in the form of exercises and the creation of their own television programs. While producing and directing their programs, students, working in crews, will learn to operate studio television equipment and develop an understanding of how messages are communicated using "live" or "life-on-tape" production methods.

COMM222901
Food, Media, and Culture
Tran, Anthony D
Spring 2024
Beyond providing sustenance, food has become increasingly important in how we communicate our cultural identities, politics, and tastes with ourselves and others. This class will explore the complex intersections of food, media, and culture to analyze the various ways mediated food operates as communicative practices in our everyday lives. This course will examine topics such as the history of food on television, communicating nationalism through culinary discourses, online debates over authentic foods, global flows of food documentaries, dieting and foodie culture in social media, YouTube food tutorials as cultural maintenance, online food activism, and the racialization of ethnic foods in popular culture. Grading will be based on classroom discussion, essay-based exams, and interactive group-work.

COMM223501
Communicating Politics
Fennimore, Jillian
Spring 2024
This course takes both a theoretical and practical approach to the art of political communication. Taught by an instructor with extensive field experience, the class surveys major historical trends in campaign advertising, policy messaging, and media relations. It then considers the modern world of political communication, offering an up-to-the-minute assessment of major trends in the field. Students have the opportunity to develop their own skills and portfolios by creating original political advertisements, social media campaigns, policy speeches, and more. The course features a number of notable guest speakers, including active politicians, candidates, and campaign managers.

COMM224301
Mobilizing for Mobile Media Storytelling World
Reynolds, Paul A
Spring 2024
Satisfies one of three elective courses required within the Communication major. With the advent of the iPhone in 2007, and Android mobile devices shortly thereafter, came the smartphone media revolution. Once the domain of high cost production studios and controlled distribution through a handful of television networks, digital storytelling is now in the hands of the average citizen. Today, nearly three billion smartphones offer extraordinary access to digital media creation and post production tools, as well as instant content distribution across increasingly faster, global networks. With this kind of once unimaginable access to media creation and distribution comes an urgency to understand this tsunami of digitally crafted and often manipulated communications. In this course, we will examine the various applications and impact of this new world of networked, media-rich, mobile devices, while getting hands-on experience actually crafting digital stories with little more than smartphones for video acquisition. While the cost of smartphone production can be virtually free, to create effective short form digital videos still requires some fundamental skills. To that end, students will learn how to plan, direct, shoot, and edit their own smartphone productions from how-to videos to short commercials, as well as advocacy spots, and political issues and candidate videos.

COMM224701
Covering Sports in the Digital Age
Cotillo, Christopher Gene
Spring 2024
Satisfies one of three elective courses required within the Communication major. This course will introduce students to the theoretical and practical elements of covering sports in the age of digital media convergence. Taught by an experienced practitioner, the class will both review the history of sports media and offer students the opportunity to produce original creative work suited for online distribution. Topics will include journalistic ethics, social media strategies, social justice in sports coverage, and the practicalities of reporting and story construction. Students will be evaluated both via exams and through the submission of a creative portfolio.

COMM225001
Media Ethics in the Digital Age
Breen, Marcus J
Spring 2024
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. *** Students that have taken COMM2250 Mass Communication Ethics may not take this course*** This course gives students an understanding of the ethical dimensions of communication in an accelerating digital world. Drawing on philosophical principles that resonate with Jesuit values, students will learn to identify, evaluate, and where possible interpret moral conflicts in the media and communication environment, in the media industry, and between the industry and the public. Rather than look at ethical conflicts strictly from a Western lens, the course introduces the students to a variety of philosophical and cultural models. Using a case study approach, the course addresses various contemporary ethical concerns, such as social media and mental health, misinformation, hate speech, extremist content, documentaries, alternative business models for journalism, international and cross-cultural issues, commodity activism, guerilla marketing, entertainment, privacy, doxing, and copyright.

COMM225401
Introduction to Jewish Culture and Civilization
Sienkiewicz, Matthew S
Spring 2024
This course may be used to satisfy one of four electives required within the Communication major. This course introduces students to the study of Jewish culture and civilization and serves as the gateway course for Boston College's Jewish Studies minor. The course is divided into three core sections: core Jewish texts and beliefs, Jewish geography and languages, and Jewish cultural production. The course presumes no previous knowledge of the subject matter and welcomes students from every discipline. Objects of study will range from the Hebrew Bible and the Talmud to Ladino music, Superman comics, and Seinfeld. The course will feature guest lectures from across Boston College's Jewish Studies faculty and will include off-site learning opportunities ranging from trips to museum exhibitions to dinner at an area kosher restaurant.

COMM225601
Influencer Culture
Peterson, Kristin M
Spring 2024
This course may be used to satisfy one of four required electives within the Communication major. The expansion of social media platforms and algorithmic digital content has seen the emergence of the influencer, an individual who builds a following and markets various products and services through branding their own lifestyle. This course will examine the historical predecessors to contemporary influencers, such as celebrity culture, reality TV, tabloids, TV talk shows, lifestyle magazines, and blogging. Students will also analyze contemporary cases in relation to theories around influence, celebrity, authenticity, authority, and therapeutic culture. The influencer industry will be used as the lens to explore various themes in contemporary digital culture, such as the political economy of social media, marketing, algorithms, gender, racial identity, class, spirituality, wellness, mental health, misinformation, political activism, aesthetic styles, and exploitation of labor.

**COMM226101**  
**Critical Studies of Stardom and Celebrity**  
**Hogan, Lindsay R**  
**Spring 2024**
This course may be used to satisfy one of the four electives required within the Communication major. This course critically investigates how stardom and celebrity are conceived, constructed, performed, commodified, and circulated within historical and contemporary media landscapes. It will do so by mapping the paradoxical and contingent nature of fame, public and private selves, and the politics of the 'ordinary' social sphere against the 'extraordinary' world of celebrity culture. Drawing on literature and theories from the fields of media and cultural studies, critical theory, and visual culture alongside social-scientific case studies, students will interrogate the role of celebrity in social identity formation, its connection with networks of economic and political power, and its relation to emerging media practices and platforms. This course is restricted to fourth-year students in the Communication major.

COMM226501
Theory, History and Practice of Talk Media
Citorik, Christopher
Spring 2024
Satisfies one of three elective courses required within the Communication major. This course offers an overview of the historical, theoretical, and practical elements of American talk media from the dawn of broadcasting to today. Beginning with early U.S. radio, the class considers the ways in which economics, politics, technology, and culture have shaped American public discourse. The course concludes by giving students an opportunity to produce their own podcast, teaching skills that will allow them to not only create professional content, but also to understand better the communication history and theory they have studied throughout the semester.

COMM227001
Media Affects and Emotions
Ngai, Tsz Lam
Spring 2024
This course may be used to satisfy one of four electives required within the Communication major. This class invites you to think about the media as a cocktail of affects and emotions. We will think with several social, cultural, and media theorists to understand how the media produce, magnify, and sell various affects and emotions. And we will discuss how media affects are often manufactured and experienced in contradictory forms, such as guilty pleasure, cuteness, and anti-fandom. This course will explore a wide range of media, including news, film, television, and digital culture, paying particular attention to how media affects signify, reinforce, or subvert power structures.

COMM227501
Communication, Consumerism, Capitalism
Erol, Ali Ersen
Spring 2024
This course may be used to satisfy one of four electives required within the Communication major. This course explores the complex relationships between rhetorics, representations, and constructions of consumption and production within the capitalist political economy. In this course, we use our relationship to food as the main vehicle to explore different aspects of the US environmental history: from the pre-contact period to colonialism to the conservation movement, to urbanization, suburbanization, to the effects of the most recent COVID pandemic on food systems, and how food, as well as our relationship to it, has changed over time. We explore how food travels and has traveled from a seed in a farm to our fridges to a meal on our tables in our homes, in our dining halls, and in our food pantries over different periods of time. Examining the effects of settler colonialism, slavery, patriarchy, climate change, imperialism, and capitalism on food production and consumption, this course traces the how as well as the why of what we eat today. This includes not only the various social forces that shaped our food production and consumption habits but also the rhetorics and representations of food over this period of time. Additionally, the course delves into various examples of alternative food systems that have existed and still exist in the U.S. and encourages students to think critically about not only the consumption of the food they eat, but also its production, representation, and rhetoric. As such, we take a comprehensive as well as a critical look at the complex web of relationships between political-economic structures and symbolic systems that sustain or challenge it.

**COMM228301**  
Asian Americans in Sport and Society  
Kim, Kyoung-yim  
Spring 2024
In the mid-twentieth century, sport was a bastion of white supremacy, and it embodied such U.S. national bodily ideals as white, heterosexual, Christian, muscular, and male. Histories of racial exclusion, racist violence, gendered policing, and sexual regulations positioned African-American men as outside the normative abilities of white men. In this respect, sport was a microcosm of the racial nation, with the language of citizenship and racial resistance coded within black-white discourse; however, this dichotomy failed to account for the long histories of Asian Americans in the United States. Asian-American sporting cultures trouble the current racial synchronicity between sport and nation while illuminating multiple performances of "belonging." This course highlights the diversity of Asian-American communities and aims to decipher how the ordinary practices of sporting cultures can offer extraordinary knowledge about U.S. society.

**Cultural Diversity in Media**

**Wells, Celeste C**

**Spring 2024**

This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. In an age where the world's political borders are changing rapidly, cultural artifacts found in mass communication become increasingly important. This course examines the relationship of culture and the mass media in creating a new concept of America, based on race, ethnicity and gender. From this exploration, students will be able to critique the impact of television, radio, film, cartoons, newspapers, magazines, books and the music industry on cultural perception.

COMM247101
The Social Construction of Travel
Kizito, Kalemba
Spring 2024
This course may be used to satisfy one of four electives required within the Communication major. Communication shapes how individuals perceive, experience, and articulate travel. In this course, we will delve into thought-provoking questions that encompass the essence of travel: Why do we set our bodies in motion? What profound insights can we glean about others through travel, and how do such insights enrich our understanding of ourselves? To tackle these intriguing questions, we will tap into an array of theoretical frameworks, including Intercultural Communication Theory, New Media Theory, Cultural Studies, Visual Communication and Representation Theory, Media Literacy, and Postcolonial Theory, among others. These frameworks will serve as cognitive maps, illuminating the intricate interplay between communication, travel, media, culture, and self-perception.

COMM333501
Communication Methods: Honors
Ingram, Brett D
Spring 2024
Open to students in departmental honors. This course is an honors introduction to research methods used in communication research. Students will learn how to ethically conduct research; develop a working knowledge of the IRB and associated requirements; learn the process of creating a compelling research question/hypothesis; acquire the skills necessary to gather and analyze data; and write initial scholarship regarding their potential thesis project. Overall, this course will create a strong foundation for students who will conduct their own research. Students will demonstrate their understanding of the material as well as their ability to apply the material through exams, a research project, an oral presentation, and daily participation.

COMM336801
Theories of Culture and Identity
Kizito, Kalemba
Spring 2024
Difference is a fact of the human condition. What do we learn about ourselves and Others in relational encounters marked by difference? Differences can divide communities, societies, countries and perpetuate violence and suffering. Yet, if faced with courage, integrity, and inquiry, these same differences can lead to authentic connections that benefit individuals and their societies. Effective communication requires study and practice, intense intellectual focus, and genuine emotional exploration. **Satisfies the required theory course in the Communication major**

Critical Theory
Ingram, Brett D
Spring 2024
Satisfies the required theory course in the Communication major. This course investigates and critiques the many ways that social, cultural, and political power is consolidated, negotiated, or resisted through popular media. We will read an assortment of theoretical approaches and primary texts (including those drawing from Marxist, ritual, semiotic, psychoanalytic, and functionalist traditions, among others) and apply them to ideological norms in society surrounding gender, race, class, violence, and the body. Looking at both the structural constraints in the production process of advertising, television, film, and social media, and the interpretive agency of audiences, our targets for analysis will be wide-ranging and contemporary.

Satisfies one of two writing-intensive courses required within the Communication major. Restricted to Juniors and Seniors. This course is designed to examine events and situations that potentially threaten the viability of an organization. Attention is devoted to developing an effective crisis communication plan, speaking to multiple stakeholders, decision-making under pressure, and resolving—rather than litigating—organizational problems. Among the studies examined are the Tylenol product tampering incident, the Exxon Valdez accident, the Union Carbide gas leak, the Challenger Space Shuttle disaster, the Three Mile Island accident, and the Pepsi syringe hoax.

COMM445201
News Media/Democracy
Serazio, Michael J
Spring 2024
Satisfies one of two required writing-intensive courses for Communication majors. The press plays an essential role in America and the world. This course aims to equip students to become critical news consumers with both a skilled understanding of how journalism works and political literacy about the big issues of our time. Through classic scholarly reflections as well as contemporary punditry examples, we will tackle the news media critically across three dimensions: learning about its indispensable function in mediating politics and democracy throughout history and today; studying and practicing the craft of opining writing and social advocacy; and evaluating and critiquing the performance of the press across these fronts.

Corequisites: None
COMM445501
Comedy Studies Seminar
Sienkiewicz, Matthew S
Spring 2024
Satisfies one of two writing intensive courses required within the Communication major. Restricted to Juniors and Seniors. This course surveys major theories of comedy and applies them to the world of contemporary media. Students will study major thinkers in the field of comedy, talk to creators of comedy, and analyze a wide range of media ranging from silent cinema to contemporary sitcoms to the latest in social media. Students will write a research paper that combines theories of comedy with the economics of media in order to understand how comedy creates both laughs and profits while also playing a key role in contemporary politics and society.

COMM447401
Digital Gaming and Gaming Cultures
Erol, Ali Ersen
Spring 2024
Satisfies one of two writing-intensive courses required within the Communication major. The purpose of this course is to understand the place of games and gaming in contemporary culture. While the course starts with an introduction to games and gaming in a general sense, most of the content is focused on video games and digital gaming culture including but not limited to the interaction between cultural context game design, game dialogue and content, identity representation in video games, game-book-movie adaptations, as well as issues such as gamergate, esports competitions, microtransactions, and exploitation and harassment in the gaming industry. In other words, this course takes digital gaming as a cultural text and approaches it from a multidisciplinary perspective. Our aim is to move from mindless consumption of video games to understanding them as any other cultural text that needs to be approached with care and critical thought. This course will meet regularly in our gaming lab. We will have lecture times as well as gaming lab times. Our gaming lab times will be dedicated to playing and analyzing games that had an important impact on the industry as well as on the players. Moreover, this is a writing-intensive course that requires a 25-page research paper that the student is expected to undertake through the course of the semester. The topic of the research paper needs to be about games or gaming culture, though the students can shape their research paper based on where their interest lies relative to the topic at hand.

COMM447501
Introduction to Honors
Peterson, Kristin M
Spring 2024
Open to students in departmental honors. Satisfies one of two writing intensive courses required within the Communication major. This course is an honors-level introduction to communication research and scholarship. This course will move beyond the initial concepts explored in research methods and required survey courses in order to prepare students to conduct their thesis research. Students will demonstrate their ability to apply the material through exams, oral presentations, daily participation and the completion of a 25 page thesis prospectus.

COMM447601  
**Screening Genre in the United States**  
**Truelove, Joshua M**  
**Spring 2024**  
Satisfies one of two writing intensive courses required with the Communication major. Restricted to Juniors and Seniors. This course explores the evolution of film and television genre in the United States. By examining the sociopolitical context of different eras, students will have the opportunity to gain an understanding of how political ideologies, major historical events, cultural shifts, and technological advancements impact the production of television and film in different genres. Students will also have the opportunity to engage with television and film analysis theories and methods to investigate the impact screening genre and American sociopolitical culture have on one another.

**Credits:** 3  
**Room and Schedule:** Stokes Hall 361S Tu 03:00PM-05:30PM

COMM447701

Fashion as Communication

Ingram, Brett D

Spring 2024

Satisfies one of two writing-intensive courses required within the Communication major. Restricted to Juniors and Seniors. This writing intensive course approaches fashion as a social practice that functions not only as an aesthetic performance, but also communicates messages concerning one’s gender, sexual, racial, and class identities, affiliation with (or opposition to) resistant political movements and subcultural groups, and their attitudes towards the ruling ideology. When we get dressed, we are always broadcasting to others resonant signals about who we are, what we value, and how we wish to be treated. While sometimes dismissed as a "superficial" cultural phenomenon, fashion serves as a key site at which struggles over social power and the equitable and sustainable distribution of resources are staged. In this course, we will conduct a historical survey of fashion trends in their sociopolitical contexts, examine the complex intermingling of fashion's aesthetic impact and its cultural effects, and study changes in the fashion industry that have profound implications for human rights and the environment. Students will conduct a research project (culminating in a 25-page paper) that analyzes and critiques stylistic objects, fashion trends, or industry developments in light of their relation to cultural, social, or political change.

COMM558901
Internship Practicum
Caswell, Christine A
Spring 2024
This course may not be repeated. Satisfies one of three elective courses required within the Communication major. This course gives Communication majors with junior or senior standing an opportunity to pursue a 15-20 hour per week internship in a specific field of Communication. Practical experience will be supplemented by discussions of relevant theoretical constructs. Periodic discussion group seminars will enhance a student's immersion in the industry. Adherence to professional protocol is expected. A field research paper is required as well as supervisor evaluations. This course counts as a 3-credit Communication elective. Instructor permission is required for enrollment. This course may also count for LSEHD students' required practicum; permission from Dean DeVoy is required for LSEHD students.

CSCI110101
Computer Science I
Marques Samary, Maira R
Summer 2023
Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

Satisfies Core Requirement: Mathematics
CSCI110201
Computer Science II
Marques Samary, Maira R
Summer 2023
In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

CSCI227201
Computer Organization and Lab
Biswa, Anjum; Osborne, Tyler G
Summer 2023
This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

Computer Science Courses: Fall 2023

CSCI108001
Principles of Computer Science
Marques Samary, Maira R
Fall 2023
This is an introductory course for students with little or no programming experience. It is intended principally for students who will not be CS majors or minors, but it will help prepare students for future computer science courses if they wish to continue, and will enable them to use programming to solve problems in their field of study. The course presents an overview of the history, great principles, and transformative applications of computer science, as well as a comprehensive introduction to programming. Students will start with visual coding and later be introduced to Python. The course is based on the ‘learning by doing’ approach where active participation and pair programming are pillars of the course.

---

**CSCI109001**  
**Data Science Principles**  
Mohler, George  
Fall 2023
This course will provide students with an overview of the field of data science and its responsible uses, along with an introduction to programming in Python from a data science perspective. An emphasis will be placed on solving problems and applying data science principles to real-world datasets. For example, students will learn sorting algorithms that would be taught in a traditional introduction to programming class, but then will apply the algorithms to a data science problem (for example assessing the fairness of a loan scoring algorithm with respect to protected classes of individuals). Python programming topics will include data structures, functions, recursion, algorithms, exploratory data analysis, data processing and visualization. Students will engage through readings and in class discussions on topics such as applications of data science for the common good, privacy in a digitally connected world, issues of representation and omission in data collection, biases inherent in constructing information infrastructures and classification schemes, and the impacts of algorithmic decision-making.

Griffith, William
Fall 2023
Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

Introduction to Scientific Computation
Levear, Duncan A
Fall 2023
This is an introductory course in computer programming for students interested in numerical and scientific computation. Emphasis will be placed on problems drawn from the sciences. Many mathematical models of the behavior of complex natural systems have no closed-form solution, and computational modeling is needed for data exploration and to obtain approximate solutions. The course discusses different models and approximation methods, how to implement them as computer programs, and the factors that influence approximation quality. Topics include computer representation of floating-point numbers and data, computer program design and control flow, data visualization, nonlinear equations, systems of linear equations and least-squares, and Fourier analysis, with additional topics as time allows. Students will write programs in the Python programming language, primarily.

CSCI224401
Randomness and Computation
McTague, Carl S
Fall 2023
This course presents the mathematical and computational tools needed to solve problems that involve randomness. For example, an understanding of random variables allows us to efficiently generate the enormous prime numbers needed for information security, and to quantify the expected performance of a machine learning algorithm beyond a small data sample. An understanding of covariance allows high quality compression of audio and video. Topics include combinatorics and counting, random experiments and probability, random variables and distributions, computational modeling of randomness, Bayes' rule, laws of large numbers, vectors and matrices, covariance and principal axes, and Markov chains.

Credits: 3
Room and Schedule: 245 Beacon Street Room 229 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: CSCI1101 Computer Science 1, CSCI2243 Logic and Computation or Math2216 Intro to abstract Math, and MATH1103 Calculus II for Math and Science majors.

CSCI225401
Web Application Development
Yun, Mira
Fall 2023
The web connects our society, providing enormous opportunities for changing and improving how we live every day, from sharing information to interacting with others. We have witnessed the power of the web through various web-based applications, including social media, productivity, and transportation applications. These digital utilities have seamlessly integrated into our routines, fundamentally altering our methods of communication, work, and mobility in recent times. Students will learn how to develop usable and useful web applications in this course. The overall architecture of Internet applications is examined at a high level. Special emphasis is placed on front-end development, including HTML, CSS, and JavaScript. This course further expands to encompass React, a component-based library for building frontend interfaces, as well as Firebase, a cloud-based backend service. The course will culminate with a final project where students take a human-centered design approach to address the needs of people by constructing a sophisticated web application.

CSCI226701
Technology and Culture
Griffith, William
Fall 2023
This interdisciplinary course will first investigate the social, political, psychological, ethical, and spiritual aspects of the Western cultural development with a special emphasis on scientific and technological metaphors and narratives. We will then focus on the contemporary world, examining the impact of our various technological creations on cultural directions, democratic process, the world of work, quality of life, and especially on the emergent meanings for the terms "citizen" and "ethics" in contemporary society. Students will explore technologies in four broad and interrelated domains: (1) computer, media, communications, and information technologies, (2) biotechnology, (3) globalization, and (4) environmental issues.

CSCI226801
Data, Ethics and Society
Hurley, Deborah
Fall 2023
If you tried to live for one day without generating any data, how would you spend it? The use of data has proliferated and is pervasive. This timely, topical course examines key ethical questions of the Information Age. These issues pervade numerous, diverse aspects of the economy and society, from human rights to international trade. Students will learn about these topics, beginning first with acquaintance with the dominant ethical frameworks of the 20th and 21st centuries. They will then employ these frameworks to understand, analyze, and develop solutions for leading problems in the Information Age and their technological, social, economic, policy, and legal implications. Subjects include artificial intelligence (AI), big data, privacy, bias, accountability, mis/disinformation, human rights, hate speech, liberty, autonomy, international and global concerns, and emerging issues. You will come away with useful tools to understand and craft answers to some of the most pressing problems of our time.

Credits: 3
Room and Schedule: 245 Beacon Street Room 102 TuTh 01:30PM-02:45PM
CSCI227101
Computer Systems
Aviram, Amittai F
Fall 2023
This course is about how computing machines implement the human-friendly abstractions we express in our programs. It reveals the internal representations of data and instructions, as well as the management of data storage in memory, the coordination of processes, and the interactions between operating systems and the programs being executed. Computer Systems explores system behavior and operations in considerable detail. This greater detail is essential for optimizing program performance, for working within the finite memory and word size constraints of computers, for effective debugging, and for systems-level programming. This hands-on course introduces you to the C programming language and techniques of systems programming through extensive coding exercises.

CSCI227201
Computer Organization and Lab
Biswas, Anjum
Fall 2023
This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

**Text Processing**

**Prud'hommeaux, Emily T**

**Fall 2023**

In this class, students will learn about how digital texts are created, stored, and processed in order to support the exploration of text using natural language processing (NLP) methods. Topics will include character encoding, file formatting, methods of text compression, fluent use of a modern text editor, text hacking using unix utilities, and text analysis techniques, such as building word frequency distributions, n-gram models, and word embeddings, with Python. Interested students should have at least intermediate Python programming skills and an interest in text and human language.

Data can capture a snapshot of the world and allow us to understand ourselves and our communities better. With ever-increasing amounts of data, the ability to understand and communicate data is becoming essential for everyone. Visualization leverages our visual perception to provide a powerful yet accessible way to make sense of large and complex data. It has been widely adopted across disciplines, from science and engineering to business and journalism, to combat the overabundance of information in our society. In this course, students will learn to acquire foundational knowledge about how to design effective visualizations for analysis and presentation based on theories and principles from graphic design, perceptual psychology, and cognitive science. Students will also learn practical skills about how to rapidly explore and communicate data using Tableau and build interactive visualization products (e.g., articles, tools, and systems) using web-based frameworks including D3.js and Vega-Lite.

This course provides an introduction to computational mechanisms that improve their performance based on experience. Machine learning can be used in engineered systems for a wide variety of tasks in personalized information filtering, health care, security, games, computer vision, and human-computer interaction, and can provide computational models of information processing in biological and other complex systems. Supervised and unsupervised learning will be discussed, including sample applications, as well as specific learning paradigms such as decision trees, instance-based learning, neural networks and deep learning, Bayesian approaches, meta-learning, and clustering. General concepts to be described include feature space representations, inductive bias, overfitting, and fundamental tradeoffs.

CSCI335301

Object-Oriented Design

Bolotin, Naomi

Fall 2023

This course focuses on ways to organize object-oriented programs so that the code is more streamlined and extensible. A classic set of twenty-three design patterns will be covered, along with a set of best practices. Students will apply the design patterns to data sets, as well as implement a final project of their choosing in Java.

CSCI335601
Software Engineering
Marques Samary, Maira R
Fall 2023
This course covers the basic life cycle of software development: requirements, design, implementation, testing, and production release. Students will learn the theory related to software engineering, but they will also learn hands-on how to create their own software. The main evaluation of the course is a team project that will simulate a small real project. The project will be done using the framework Django (Python), the CSS Framework Bootstrap, among other technologies. The project will be worth 50% of the grade, as well as 2 midterms, an exam, and a peer assessment (how your team members evaluate the work you did).

CSCI335701
Database Systems Implementation
Sciore, Edward
Fall 2023
An introduction to the internals of client-server database systems. A database system is large and sophisticated. By studying its components, one also learns techniques that apply to numerous other large systems. Topics include JDBC drivers, disk and memory management, transaction processing, and efficient query execution. This course will involve substantial programming in Java. It does not cover the use of commercial database systems. Preqreq: CSCI1102 or equivalent. Prior experience with a relational database system is not required.

CSCI339001
Topics in Computer Science: Large-Scale Data Processing
Ochoa, Sergio Fabian
Fall 2023
In many modern applications such as social networks analysis, web data mining, computational biology, and scientific computing, processing the whole data in the main memory can be infeasible due to the growth of the data sets. This course will cover a few paradigms for handling massive data sets, including the streaming model, massive parallel computation models such as MapReduce and Spark, and vertex-centric models such as Pregel. You will learn a few fundamental algorithms in these models and their analysis. You are also expected to implement some of them through hand-on programming exercises.

Computer Science Courses: Spring 2024

CSCI109001
Data Science Principles
Prud'hommeaux, Emily T
Spring 2024
This course will provide students with an overview of the field of data science and its responsible uses, along with an introduction to programming in Python from a data science perspective. An emphasis will be placed on solving problems and applying data science principles to real-world datasets. For example, students will learn sorting algorithms that would be taught in a traditional introduction to programming class, but then will apply the algorithms to a data science problem (for example assessing the fairness of a loan scoring algorithm with respect to protected classes of individuals). Python programming topics will include data structures, functions, recursion, algorithms, exploratory data analysis, data processing and visualization. Students will engage through readings and in class discussions on topics such as applications of data science for the common good, privacy in a digitally connected world, issues of representation and omission in data collection, biases inherent in constructing information infrastructures and classification schemes, and the impacts of algorithmic decision-making.

CSCI110122
Computer Science I
Wiseman, Charles
Spring 2024
Satisfies Core requirement for Mathematics for CSCI1101 and CSCI1103. This course is an introduction to the art and science of computer programming and to some of the fundamental concepts of computer science. Students will write programs in the Python programming language. Good program design methodology will be stressed throughout. There will also be a study of some of the basic notions of computer science, including computer systems organization, files and some algorithms of fundamental importance.

CSCI110201
Computer Science II
Levear, Duncan A
Spring 2024
In this course, the student will write programs that employ more sophisticated and efficient means of representing and manipulating information. Part of the course is devoted to a continued study of programming. The principal emphasis, however, is on the study of the fundamental data structures of computer science (lists, stacks, queues, trees, etc.). Both their abstract properties and their implementations in computer programs and the study of the fundamental algorithms for manipulating these structures. Students will use Java for programming.

CSCI210001  
Fundamentals of Operations Research  
Levear, Duncan A  
Spring 2024  
The field of Operations Research (OR) explores how optimization algorithms can inform decision-making. In this course, students will engage with a variety of decision-making problems that can be solved efficiently by fundamental OR algorithms. Some of the problems we will study include the diet problem, the assignment problem, and transport problems such as shortest-path and maximum-flow. Each problem can be framed as a Linear Program, for which there is an elegant and insightful theory leading to the ubiquitous simplex method. Other topics to be considered include degeneracy, duality, sensitivity analysis, and some Integer Programming algorithms such as branch-and-bound. Students should expect a healthy mix of theory and hands-on coding.

CSCI224401
Randomness and Computation
Straubing, Howard
Spring 2024
This course presents the mathematical and computational tools needed to solve problems that involve randomness. For example, an understanding of random variables allows us to efficiently generate the enormous prime numbers needed for information security, and to quantify the expected performance of a machine learning algorithm beyond a small data sample. An understanding of covariance allows high quality compression of audio and video. Topics include combinatorics and counting, random experiments and probability, random variables and distributions, computational modeling of randomness, Bayes' rule, laws of large numbers, vectors and matrices, covariance and principal axes, and Markov chains.

Credits: 3
Room and Schedule: 245 Beacon Street Room 229 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: None

CSCI225301
Documenting and Preserving Indigenous Languages with Data Science
Hartshorne, Joshua K; Le Ferrand, Eric; Prud'hommeaux, Emily T
Spring 2024
In this hands-on research course, students will learn about linguistic diversity, language endangerment, and methods of preserving, documenting, and analyzing languages. The core of the course is hands-on research in collaboration with an ongoing international effort to understand human linguistic diversity. Students will compile primary linguistic data and analyze it using methods from linguistics, psychology, computer science, and data science. This is an excellent introduction to both data science and linguistic analysis; students who already have advanced skills in those areas will be able to expand those skills.

Credits: 3
Room and Schedule: O'Neill Library 246 TuTh 01:30PM-02:45PM
Satisfies Core Requirement: None
Prerequisites: There are no formal prerequisites, but it is recommended that students have taken at least one of the following: Baby Talk (psychology), Disorders of Language & Communication (psychology), Language and Language Types (linguistics), Syntax and Semant...

CSCI225401
Web Application Development
Yun, Mira
Spring 2024
The web connects our society, providing enormous opportunities for changing and improving how we live every day, from sharing information to interacting with others. We have witnessed the power of the web through various web-based applications, including social media, productivity, and transportation applications. These digital utilities have seamlessly integrated into our routines, fundamentally altering our methods of communication, work, and mobility in recent times. Students will learn how to develop usable and useful web applications in this course. The overall architecture of Internet applications is examined at a high level. Special emphasis is placed on front-end development, including HTML, CSS, and JavaScript. This course further expands to encompass React, a component-based library for building frontend interfaces, as well as Firebase, a cloud-based backend service. The course will culminate with a final project where students take a human-centered design approach to address the needs of people by constructing a sophisticated web application.

CSCI226101
Media Ethics in the Digital Age
Breen, Marcus J
Spring 2024
This course may be used to satisfy the Communication major Critical Issues requirement or to satisfy one of three electives required for the Communication major. *** Students that have taken COMM2250 Mass Communication Ethics may not take this course***

This course gives students an understanding of the ethical dimensions of communication in an accelerating digital world. Drawing on philosophical principles that resonate with Jesuit values, students will learn to identify, evaluate, and where possible interpret moral conflicts in the media and communication environment, in the media industry, and between the industry and the public. Rather than look at ethical conflicts strictly from a Western lens, the course introduces the students to a variety of philosophical and cultural models. Using a case study approach, the course addresses various contemporary ethical concerns, such as social media and mental health, misinformation, hate speech, extremist content, documentaries, alternative business models for journalism, international and cross-cultural issues, commodity activism, guerilla marketing, entertainment, privacy, doxing, and copyright.

This course explores the design and use of new technologies for learning and engages students in current debates around educational technologies, computational thinking, coding and robotics. Students will learn how to develop, implement, and evaluate technology-rich curriculum and will design their own computational meaningful projects. They will visit K-2 classrooms to implement technology-rich curricula, will learn how to use video to document their experiences and will become researchers to assess the thinking and learning fostered by the different tools.

CSCI226701  
Technology and Culture  
Griffith, William  
Spring 2024

This interdisciplinary course will first investigate the social, political, psychological, ethical, and spiritual aspects of the Western cultural development with a special emphasis on scientific and technological metaphors and narratives. We will then focus on the contemporary world, examining the impact of our various technological creations on cultural directions, democratic process, the world of work, quality of life, and especially on the emergent meanings for the terms "citizen" and "ethics" in contemporary society. Students will explore technologies in four broad and interrelated domains: (1) computer, media, communications, and information technologies, (2) biotechnology, (3) globalization, and (4) environmental issues.

CSCI227101
Computer Systems
Aviram, Amittai F
Spring 2024
This course is about how computing machines implement the human-friendly abstractions we express in our programs. It reveals the internal representations of data and instructions, as well as the management of data storage in memory, the coordination of processes, and the interactions between operating systems and the programs being executed. Computer Systems explores system behavior and operations in considerable detail. This greater detail is essential for optimizing program performance, for working within the finite memory and word size constraints of computers, for effective debugging, and for systems-level programming. This hands-on course introduces you to the C programming language and techniques of systems programming through extensive coding exercises

CSCI227201
Computer Organization and Lab
Biswa, Anjum
Spring 2024
This course studies the internal organization of computers and the processing of machine instructions. Topics include computer representation of numbers, combinational circuit design (decoders, multiplexers), sequential circuit design and analysis, memory design (registers and main memory), and simple processors including datapaths, instruction formats, and control units. In the laboratory-based portion of course students design and build digital circuits related to lecture. Exercises include hardware description languages, combinational and sequential circuits, arithmetic and logic units, and simple datapath and control units.

CSCI334501
Machine Learning
Alvarez, Sergio
Spring 2024
This course provides an introduction to computational mechanisms that improve their performance based on experience. Machine learning can be used in engineered systems for a wide variety of tasks in personalized information filtering, health care, security, games, computer vision, and human-computer interaction, and can provide computational models of information processing in biological and other complex systems. Supervised and unsupervised learning will be discussed, including sample applications, as well as specific learning paradigms such as decision trees, instance-based learning, neural networks and deep learning, Bayesian approaches, meta-learning, and clustering. General concepts to be described include feature space representations, inductive bias, overfitting, and fundamental tradeoffs.

**CSCI334701**  
**Robotics**  
**Biswas, Anjum**  
**Spring 2024**  
This course will introduce the basic principles of mobile robotics history, theory, hardware and control. Topics will include robot components, effectors and actuators, locomotion, sensors, feedback control, control architectures, representation, localization and navigation. This is a project-oriented course and the students will have hands-on experience with a real mobile robot. The students will be required to complete several individual programming assignments and a team design project.

CSCI335601
Software Engineering
Marques Samary, Maira R
Spring 2024
This course covers the basic life cycle of software development: requirements, design, implementation, testing, and production release. Students will learn the theory related to software engineering, but they will also learn hands-on how to create their own software. The main evaluation of the course is a team project that will simulate a small real project. The project will be done using the framework Django (Python), the CSS Framework Bootstrap, among other technologies. The project will be worth 50% of the grade, as well as 2 midterms, an exam, and a peer assessment (how your team members evaluate the work you did).

CSCI336201

Operating Systems

Wiseman, Charles

Spring 2024

This course covers the fundamentals of operating systems (OS) design both from a theoretical and a practical perspective. The course is organized in two parts, each involving a separate course project. The first part deals with the system call interface between applications and the OS, the multi-process abstraction of a computing system, and task scheduling algorithms. The associated project involves the implementation of a custom Unix command-line interpreter (shell). The second part of the course covers memory management, multi-threading libraries, and file systems. A real implementation of these features is studied on a miniature, open-source operating system called xv6. The associated project involves an extension of xv6 to support custom features, such as new scheduling policies, kernel-level threads, or file system recovery.

**Credits:** 3

**Room and Schedule:** 245 Beacon Street Room 229 MWF 12:00 Noon-12:50PM

**Satisfies Core Requirement:** None

CSCI336701
Compilers
Aviram, Amittai F
Spring 2024
Compilers are programs that implement high level programming languages by translating programs in such languages into machine code or some other easy to process representation. This course deals with the principles and techniques used in the design of compilers. Topics include parsing, static analysis, translation, memory management and code optimization. This course includes a significant programming project.

CSCI338101
Cryptography
Volkovich, Ilya
Spring 2024
Can Alice ensure that the message she sends to Bob can be read only by Bob, even if the message is intercepted by an eavesdropper? Can Bob ensure that the message he receives really came from Alice? How can a server verify a client's password without storing sensitive password information? This course studies the theoretical foundations of algorithms for private and public key cryptography, digital signatures, cryptographic hash-codes, and authentication schemes. We will also consider see a few world protocols and practices (e.g., SSL and public key certificates)

CSCI339001  
Topics in Computer Science: Large-Scale Data Processing  
Su, Hsin Hao  
Spring 2024  
In many modern applications such as social networks analysis, web data mining, computational biology, and scientific computing, processing the whole data in the main memory can be infeasible due to the growth of the data sets. This course will cover a few paradigms for handling massive data sets, including the streaming model, massive parallel computation models such as MapReduce and Spark, and vertex-centric models such as Pregel. You will learn a few fundamental algorithms in these models and their analysis. You are also expected to implement some of them through hand-on programming exercises.

CSCI339301  
Formal Methods  
McTague, Carl S  
Spring 2024
Complex programs often have bugs, sometimes with serious consequences. Although testing can help root them out, it is impossible to test all possible behaviors of complex programs. To complement testing, one can construct mathematical proofs that programs are correct. This technique, called formal verification, can be done using a tool for writing and automatically checking such proofs. This course introduces formal verification with one such proof checking system called Coq. Students will write precise specifications of how programs should behave, and then carry out proofs in Coq showing that those specifications are met.

CSCI339901
Topics in Computational Intelligence: Vision and Learning
Yuan, Yuan
Spring 2024
This course offers an introduction to computer vision and deep learning. It covers machine
learning basics and various deep neural networks such as convolutional neural networks,
sequential modeling, attention mechanisms, and transformers. The course will also tentatively
delve into cutting-edge self-supervised learning, imbalanced learning, and various generative
modeling techniques, including variational auto-encoders, generative adversarial networks,
diffusion models, and autoregressive models. These models are applicable across various
domains, utilizing different data modalities such as images, language, and healthcare data.

Courage to Know
Rudner, Bonnie
Fall 2023
This will be an interactive three-credit seminar of fifteen students, serving as one of students' university electives and one of the five courses in the first semester. Your instructor will serve as your academic advisor during the first year. This course offers an introduction to college life. The readings and discussions will investigate personal and social development in the college years. Topics will include the nature of learning, diversity, social justice, human sexuality, intimacy, addiction, and other topics. The class materials and strategies are designed to be provocative and practical as well as intellectually stimulating.

Cornerstone Courses: Spring 2024

UNCS220101
Courage to Know
Hincks, Martha M
Spring 2024
This will be an interactive three-credit seminar of fifteen students, serving as one of students’ university electives and one of the five courses in the first semester. Your instructor will serve as your academic advisor during the first year. This course offers an introduction to college life. The readings and discussions will investigate personal and social development in the college years. Topics will include the nature of learning, diversity, social justice, human sexuality, intimacy, addiction, and other topics. The class materials and strategies are designed to be provocative and practical as well as intellectually stimulating.

Bracher, Elizabeth R
Spring 2024
This will be an interactive three-credit seminar of fifteen students, serving as one of students' university electives and one of the five courses in the first semester. Your instructor will serve as your academic advisor during the first year. This course offers an introduction to college life. The readings and discussions will investigate personal and social development in the college years. Topics will include the nature of learning, diversity, social justice, human sexuality, intimacy, addiction, and other topics. The class materials and strategies are designed to be provocative and practical as well as intellectually stimulating.

Earth and Environmental Sciences Courses: Summer 2023

EESC114001
Our Mobile Earth
O'Brien, Suzanne R
Summer 2023
This course will provide you with an introduction to the structure of Earth and the dynamic processes that continuously shape and remodel its surface. During class, we will discuss the formation and evolution of the oceans and continents within the framework of the modern theory of plate tectonics. The locations, causes and effects of earthquakes and volcanoes are presented. The dynamics within Earth which drive the tectonic plates are outlined.

Credits: 3
Room and Schedule: On-line Asynchronous

Environmental Issues and Resources
Galli, Kenneth G
Summer 2023
Hybrid Core Course includes three themes: (1) Intro to Environmental Geology, (2) How to write well and how to write field trip reports, (3) How to use Google Earth to understand Earth Materials and Processes. Learn about the major processes at work inside and on the surface of the earth. Learn to be a careful observer and to write succinct field trip reports, through two field trips and the writing of a field trip report. Each class is designed to examine the facts, historical background, and through in-class exercises, homework and field trips, provide experience in analyzing and solving real world problems associated with environmental issues, resources and sustainability. Demonstrations, videos, readings and several field trips underscore important concepts and applications and the importance of careful observation. Online Google Earth exercises, done remotely, will introduce the power of this geographic application to understand geology.

**Earth and Environmental Sciences Courses: Fall 2023**

EESC113201  
**Exploring the Earth**  
Kruckenberg, Seth C  
**Fall 2023**
The Earth is a dynamic planet that our species is clearly changing. A great challenge of the twenty-first century is to maintain the Earth's ability to support its growing human population. This course discusses the origin and materials of the Earth and the processes by which it has evolved. It is a first course for Geological Sciences majors and also provides a background for departmental majors and minors. EESC1132 is appropriate as a natural science core course for students interested in the Earth Sciences. The laboratory consists of in-class exercises, analysis of rocks, and a weekend field trip.

Astronomical observations and theories date back to the beginning of recorded history. The development of astronomy is closely tied to the growth of physics, mathematics, philosophy, and theology. Emphasis is on large-scale concepts and on how we know what we know about the stars, our galaxy, and the universe. The course covers these discoveries and ideas from the earliest days of astronomy to many of the recent, exciting advances.

**Credits:** 3

This course may be taken independently of EESC1167. This course will explore the dynamic processes operating on and within the earth and how those processes can impact humans. We will explore the nature of natural disasters, including river and coastal flooding, volcanic eruptions, earthquakes, landslides, severe storms, climate changes, and bombardment by rare extraterrestrial objects. Emphasis will be placed on understanding the current science used to predict the occurrences of these disasters, how accurate those predictions are, and the associated mitigation practices.

**EESC117001**  
**Rivers and the Environment**  
**Snyder, Noah P, PHD**  
**Fall 2023**

Scientific understanding of rivers is vital to address many of today's environmental challenges. Rivers transport and distribute water, sediment, nutrients, and contaminants throughout the landscape. They provide habitat and migration pathways for countless aquatic species. Rivers supply fresh water, power generation, and recreational opportunities to much of the world's human populations. We will learn about the geological, hydrological, and biological processes that are important to rivers and watersheds, and how knowledge of these processes aids our ability to manage, protect, and restore these systems.

EESC118001
The Living Earth I
Kruckenberg, Seth C
Fall 2023
This core course provides a broad and modern presentation of the major topics and principles of Earth Science. The lectures will cover all the fundamental subjects of geology, with emphasis on earth materials such as minerals, rocks and internal and external Earth processes, with a brief overview of important aspects of Earth history. The labs will involve hands-on work studying minerals, igneous rocks, sedimentary rocks, metamorphic rocks, viscosity, weathering and running water, formation of ripples and sand dunes, plate tectonics, fossils, and earthquakes, in addition to a local field geology trip during lab time. Additional topics may be covered if time allows.

Crisis and Storytelling in the Age of Climate Change

Humphries, Courtney; Palevsky, Hilary I; Song, Min

Fall 2023
This is a Complex Problems course and is open to Freshman only. The realities of a changing climate, including intensified extreme weather events, rising sea levels, and strengthening heat waves and droughts, are already being felt by frontline communities around the world. This course focuses both on hearing stories about climate change as told by climate writers, scientists, and members of frontline communities, and telling these stories ourselves. We will examine storytelling as it works across mediums and genres from literature to scientific data visualizations, and consider what it means to write an essay, produce a graph, create a podcast, or make a film. Students in the course will read, watch, and analyze examples of climate storytelling, broadly defined, and produce their own personal essays, infographics, podcasts, and/or films. Some questions well foreground throughout the semester are: How do we communicate the science and the human impacts of the climate crisis? Whose ways of knowing and lived experiences do we privilege? How can the stories we tell move society towards just climate solutions?

**Credits:** 3  
**Room and Schedule:** 245 Beacon Street Room 107 TuTh 01:30PM-02:45PM  
**Satisfies Core Requirement:** Natural Science

EESC172006
Crisis and Storytelling in the Age of Climate Change
Song, Min
Fall 2023
This is a Complex Problems course and is open to Freshman only. The realities of a changing climate, including intensified extreme weather events, rising sea levels, and strengthening heat waves and droughts, are already being felt by frontline communities around the world. This course focuses both on hearing stories about climate change as told by climate writers, scientists, and members of frontline communities, and telling these stories ourselves. We will examine storytelling as it works across mediums and genres from literature to scientific data visualizations, and consider what it means to write an essay, produce a graph, create a podcast, or make a film. Students in the course will read, watch, and analyze examples of climate storytelling, broadly defined, and produce their own personal essays, infographics, podcasts, and/or films. Some questions well foreground throughout the semester are: How do we communicate the science and the human impacts of the climate crisis? Whose ways of knowing and lived experiences do we privilege? How can the stories we tell move society towards just climate solutions?

Credits: 0
Room and Schedule: Stokes Hall 141N Tu 06:00PM-07:25PM
Satisfies Core Requirement: Natural Science

**Environmental Systems: The Human Footprint**

**Snyder, Noah P, PHD**

**Fall 2023**
Humans have become an increasingly significant force on Earth system, including the atmosphere, biosphere, and hydrosphere. This course explores the influence of humans on natural systems and how environmental solutions and consequences link to social, political, economic, health, and justice issues. Specifically, we will discuss topics related to population growth, energy, agriculture, urbanization, and environmental justice. This course is part of the Environmental Systems introductory sequence (EESC2201-EESC2208) for Environmental Geoscience majors.

EESC220601
Environmental Systems: Oceans
Wilson, Kathleen
Fall 2023
The oceans cover 70% of the earth's surface and are home to much of its life. The oceans are critical to the earth's biogeochemical cycling of energy and mass. Ocean currents play a key role in climate through redistribution and exchange of heat with the atmosphere and storage of CO2. Coastal areas, the narrow interface between land and ocean, represent some of the most productive, populated, and vulnerable regions on earth. The course provides an introduction to the ocean's role in earth processes and explores topics and challenges facing a changing planet through case studies and critical and analytical thinking.

EESC331001
Agroecology: The Science of Sustainable Agriculture
Pisani Gareau, Tara
Fall 2023
Conventional agriculture, while responsible for enormous increases in yield, has undermined the natural resources that support agricultural yield and ecosystem services. Yet there is a pressing need to maintain yield in the face of climate change. How can we meet the food needs of a growing human population without clearing more forests, polluting rivers and the atmosphere, overdrawing from aquifers, and threatening the existence of wild species? In this course we will learn how the principles of ecology can be applied to the design, management, and analysis of agroecosystems and agricultural landscapes with the goal of creating a sustainable food system.

Credits: 3
Room and Schedule: Devlin Hall 201 TuTh 03:00PM-04:15PM
Satisfies Core Requirement: None

EESC337801
Petrology
Nicklas, Robert
Fall 2023
This course is focused on learning the techniques of polarizing light microscopy (PLM) and on petrology and petrography of igneous and metamorphic rocks. Lectures on the petrology of how these rocks form and how they relate to the plate tectonic environments will be integrated with the laboratory. Phase diagrams will be used to help better understand the origin of igneous rocks whereas metamorphic facies reactions will be applied to understanding of progressive and retrograde metamorphic processes.

EESC442401
Environmental Geophysics
Ebel, John E
Fall 2023
This is a practical course in the methods of geophysical exploration. The emphasis is on the methods that are used in environmental site assessments and geotechnical engineering work. The principles and methods studied are also applicable to petroleum and mineral exploration. The methods covered include: resistivity, induced polarization, electromagnetics, magnetics, gravity, self potentials, ground penetrating radar and seismic refraction and reflection. In this course students will conduct geophysical investigations of selected field sites. Relevant lectures will be given on field methodology, instrumentation, theory, and interpretation. A one-hour discussion/laboratory is required.

Climate Change Debates
Shakun, Jeremy D
Fall 2023
This advanced seminar seeks to provide an overview of the science of global change and a critical evaluation of the literature through a survey of current scientific debates. We will cover a wide range of issues from topics in radiative forcing, oceans, atmosphere, cryosphere, paleoclimate, biological feedbacks, and impacts. Students will be expected to read papers and lead discussions, write assessments of each climate debate, and prepare a final term paper evaluating the scientific consensus on climate change in the context of the debates we cover.

**Credits:** 3  
**Room and Schedule:** Devlin Hall 324 M 05:00PM-07:30PM  
**Satisfies Core Requirement:** None

**EESC556301**  
**Advanced Paleoclimatology**  
**Wang, Xingchen**  
**Fall 2023**  
This course will discuss major climate events through the course of Earth's history, including Snowball Earth; warm Cretaceous; Paleocene-Eocene Thermal Maximum; Pleistocene ice ages, and ongoing climate change in the Anthropocene. We will evaluate the data and evidence documenting these climate events and discuss the underlying governing mechanisms in the context of radiative balance, greenhouse gases, ice sheets, ocean circulation, and biogeochemistry. Formats will include lectures, student presentations and discussion of scientific literature, and a term paper.

**Credits:** 3

**Senior Environmental Geoscience Research Seminar I**  
**Ebel, John E**  
**Fall 2023**  
In this two-semester course sequence, students will be introduced to the process of conducting original scientific research. This includes exploring fundamentals of a natural system from reading the scientific literature, defining a problem, designing and executing an experiment, analysis, data interpretation, and presentation of results in written and oral formats. Students will work individually or in groups within a broader research project. Topics and field areas will vary from year to year depending on existing projects and expertise of the instructor. The EESC5582-5583 sequence fulfills the senior research experience requirement for Environmental Geoscience majors.

Snyder, Noah P, PHD
Fall 2023
Independent study in Geology, Geophysics, or the Environmental Geosciences under the direction of a faculty member for undergraduate students qualifying for the University's Scholar of the College Program.

Credits: 6
Room and Schedule: By Arrangement
Satisfies Core Requirement: None
EESC662401
Environmental Geophysics (grad)
Ebel, John E
Fall 2023
This is a practical course in the methods of geophysical exploration. The emphasis is on the methods that are used in environmental site assessments and geotechnical engineering work. The principles and methods studied are also applicable to petroleum and mineral exploration. The methods covered include: resistivity, induced polarization, electromagnetics, magnetics, gravity, self potentials, ground penetrating radar and seismic refraction and reflection. In this course students will conduct geophysical investigations of selected field sites. Relevant lectures will be given on field methodology, instrumentation, theory, and interpretation.

Credits: 3

EESC668001
Applications of GIS
Carver, Lester;LoPiano, Antonio;Willis, Katherine
Fall 2023
The course covers fundamental concepts and practical applications of GIS in the geosciences, environmental sciences, land use, and other related fields. Students will learn the basics and principles of spatial database management, database query, and preparation of printed maps and gain working experience of applying GIS to their studies and research and achieve practical skills for the marketplace.

EESC669101  
Earth Systems Seminar  
Wang, Xingchen; Wilson, Kathleen  
Fall 2023  
An advanced seminar on topics in the Geosciences requiring integration of many subspecialities. Topics vary from year to year. Students will be expected to read and report on papers from the recent literature and prepare one or more talks similar to those presented at scientific meetings and a term paper integrating data from various areas of Geosciences. Required for all incoming graduate students.

Earth and Environmental Sciences Courses:
Spring 2024

EESC114601
Origin and Evolution of Life on Earth
Strother, Paul K
This course explores current theories about the origins of life, beginning with the original hypothesis of the Russian biochemist A.I. Oparin. Darwin's theory of evolution is emphasized, but many different components of the natural sciences touch upon this topic. The course lectures include the study of the oldest fossils, life in extreme habitats, cellular biology, prebiotic molecules, and the search for life on other planets.

Credits: 4
Room and Schedule: Devlin Hall 221 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: Natural Science
Prerequisites: None

EESC117401
Climate Change and Society
Ming, Yi
Spring 2024
Global climate change may be one of the biggest issues facing humanity in the twenty-first century. We investigate the scientific basis for global warming forecasts from what is well known to what is deeply uncertain based on theory, models, and the geologic record of earth's climate history. We discuss the political, economic, and social dimensions surrounding the global warming debate, and explore the current and potential impacts of climate change on developed and developing societies. Connections to recent media will be emphasized to give students an up-to-date view on the state of our national conversation on climate change.

EESC117701
Cosmos
Kuchar, Thomas A
Spring 2024
Open to all students. There are more than a dozen interplanetary probes from numerous countries that are currently collecting data from several planetary bodies in the Solar System. These exploration missions are expanding knowledge of our Solar System, which is mostly built on only about half a century of space exploration. We will discuss these space missions and their scientific goals and results, which are increasingly oriented to answer questions on planetary evolution and the possibility of extraterrestrial biospheres. Throughout this course, the fundamentals of how science works will be emphasized. If weather permits, there might also be outdoor lectures for star-gazing opportunities.

Geoscience and Public Policy
Kafka, Alan L
Spring 2024
In this course, we will explore case studies that demonstrate the role of the earth sciences in addressing problems of public policy. For each case study, students will be introduced to the underlying scientific concepts relevant to the problem being addressed. After this scientific foundation is developed, we will discuss how it needs to be considered as part of the process of making policy decisions. The course will also introduce students to how scientists and public policy makers apply the concepts of probability and statistics in the decision making process.

Environmental Systems: The Human Footprint
Kafka, Alan L
Spring 2024
Humans have become an increasingly significant force on Earth system, including the atmosphere, biosphere, and hydrosphere. This course explores the influence of humans on natural systems and how environmental solutions and consequences link to social, political, economic, health, and justice issues. Specifically, we will discuss topics related to population growth, energy, agriculture, urbanization, and environmental justice. This course is part of the Environmental Systems introductory sequence (EESC2201-EESC2208) for Environmental Geoscience majors.

EESC220401
Environmental Systems: Carbon Cycle
Wang, Xingchen
Spring 2024
Carbon dioxide emissions and climate change are among the most pressing environmental issues confronting humanity in the 21st century. This course will give you a comprehensive insight into Earth's natural carbon cycle and the ways in which human activities are modifying it. Starting with fundamental carbon chemistry, we'll explore the carbon cycle across diverse environmental systems, including the atmosphere, soil, rivers, and oceans. Lastly, we will examine the fate of anthropogenic carbon dioxide and explore ongoing technologies designed to remove carbon dioxide from the atmosphere.

EESC220701
Environmental Systems: Earthquakes
Kafka, Alan L
Spring 2024
Earthquakes are among the most frightening and devastating of natural hazards, often resulting in catastrophic loss of life and property. Earthquakes are also among the most fascinating of natural phenomena. Although the basic global scale characteristics of earthquakes are well understood in the context of the theory of plate tectonics, considered in detail earthquakes are among the most complex and unpredictable of earth processes. This course is part of the Environmental Systems introductory sequence (EESC2201-EESC2208) for Environmental Geoscience majors.

EESC331101
Earth System Science and Global Sustainability
Tian, Hanqin
Spring 2024
The humanity's grand challenges in climate change, energy, food, health and water provision involve complex geological, physical, biological and societal interactions within the Earth system. Solutions to the grand challenges demand the attainment of a new multidisciplinary paradigm for research and education. This course explores the Earth system as a whole, with an emphasis on the interrelationships between geological, biological, climatological, and human systems on regional and global scales. More broadly, this course seeks to dismantle the barriers between disciplines (geology, geography, biology, humanities, sociology, etc.) which study Earth system components by promoting multi- and inter-disciplinary perspectives. Additionally, we will explore the causes and impacts of global change through the lens of Earth system science. This knowledge becomes a firm foundation to formulate creative solutions to climate change and sustainability challenges we face today.

EESC332201
Marine Conservation Science
Offen, Vena
Spring 2024
This course explores the threats to marine diversity, and the ways in which we can preserve diversity. Covering principles from marine science, ecology and conservation biology, we ask what role does diversity play in marine ecosystems, and what are the consequences of diversity loss to ecosystem function and services. We investigate major threats to marine diversity including marine pollution, species invasion, commercial fishing, and climate change impacts. Through review of the primary literature and guided discussions, students learn about conservation efforts at the local, national and international levels, with emphasis on marine protected areas and fisheries management.

EESC333001
Paleobiology
Strother, Paul K
Spring 2024
Paleobiology is the study of evolution based on Paleontology, the fossil record of life through geologic time. The course begins with the origins of life and early evolution during the Precambrian Eon, when all major domains of life were established. The rise of plants and animals, beginning about 500 million years ago, is followed by the study of macroevolution and patterns of evolution through time. Lecture emphasizes paleobiology and environmental evolution; laboratory provides direct observation of fossils including basic morphology and phylogeny. The class may include an extended weekend field trip to Nova Scotia to visit several fossil localities.

Credits: 3
Room and Schedule: Devlin Hall 307 TuTh 01:30PM-02:45PM
Satisifies Core Requirement: None

EESC339101
Introduction to Geophysics
Ebel, John E
Spring 2024
This course provides an introduction to the fundamental principles of geophysics. Both theoretical and applied aspects of geophysics will be discussed. Topics include stress and strain, deformation of earth materials, the earth's gravitational field, the earth's magnetic field, seismic waves, earth structure, earthquakes, and tectonic processes.

Credits: 3
Room and Schedule: Devlin Hall 307 TuTh 10:30AM-11:45AM
Satisfies Core Requirement: None
Prerequisites: EESC1132 and MATH1103 and MATH1102 and EESC1134 or Permission of Instructor
Corequisites: None
Cross-listed with: None
Frequency: Periodically in the Fall
Student Level: Both
Comments: None
Status: Offered

EESC353501
Coastal Geomorphology and Processes
Wilson, Kathleen
Spring 2024
This course is a study of the physical and geological processes responsible for the formation and evolution of coastal environments. The course takes a morphodynamic approach by studying the coupled suite of hydrodynamic processes, seafloor morphologies, and sequences of change. Topics to be covered include: classification of coasts, sea level change, shallow water physical oceanography and sediment transport, and coastal environments (barrier islands and beaches, deltas, estuaries). Includes problem sets and field trip(s) to the coast.

Credits: 3
Room and Schedule: Devlin Hall 201 TuTh 09:00AM-10:15AM
Satisfies Core Requirement: None
Prerequisites: Undergrads must have taken an intro geology course such as: EESC1125 - Exploring Earth History, EESC1132 - Exploring the Earth, EESC1157 - Oceanography, EESC1168 - Environmental Geosciences: Earth Processes and Risks.
Corequisites: None
Cross-listed with: None
Frequency: null
EESC446401
Environmental Data Exploration and Analysis
Palevsky, Hilary I
Spring 2024
Earth and environmental science increasingly depends on scientific programming to explore and analyze large datasets from in situ and autonomous observations, satellite remote sensing, and numerical model output. In this course, students will learn to use MATLAB to visualize earth system data across broad spatial and temporal scales in maps and time-series plots and apply statistical tools to analyze trends and variability in their datasets. Students will also learn to critically assess datasets and to select and justify appropriate data sources and analytical methods to address scientific questions about earth system processes. Students will practice these skills in a series of data analysis assignments focused on regional and global climate data and will apply them in a team-based final research project.

Credits: 3
Room and Schedule: Devlin Hall 307 Tu 03:00PM-05:30PM

EESC523001
Stable Isotope Biogeochemistry
Wang, Xingchen
Spring 2024
This course will examine the use of stable isotopes in biogeochemistry and environmental sciences. Topics will include terminology and basic principles of stable isotope geochemistry; instruments and technique; data processing in isotope ratio mass spectrometry; isotope effects in metabolisms and biosynthesis; and applications of stable isotopes in the cycling of carbon, nitrogen, sulfur, oxygen and other elements. Formats will include lectures, numerical modeling assignments; a few hands-on lab sessions; student presentations; and a final paper or research proposal.

Credits: 3
Room and Schedule: Devlin Hall 201 F 01:30PM-04:00PM
Satisfies Core Requirement: None
Prerequisites: EESC3320 and one semester of Calculus, or with permission of the instructor.

EESC531101
Advanced Earth System Science and Global Sustainability
Tian, Hanqin
Spring 2024
The humanitys grand challenges in climate change, energy, food, health and water provision involve complex geological, physical, biological and societal interactions within the Earth system. Solutions to the grand challenges demand the attainment of a new multidisciplinary paradigm for research and education. This course explores the Earth system as a whole, with an emphasis on the interrelationships between geological, biological, climatological, and human systems on regional and global scales. More broadly, this course seeks to dismantle the barriers between disciplines (geology, geography, biology, humanities, sociology, etc.) which study Earth system components by promoting multi- and inter-disciplinary perspectives. Additionally, we will explore the causes and impacts of global change through the lens of Earth system science. This knowledge becomes a firm foundation to formulate creative solutions to climate change and sustainability challenges we face today.

EESC668601
Tectonics Seminar
Kruckenberg, Seth C
Spring 2024
This course delves into the intricate interplay between deep lithospheric processes and surface geological phenomena, exploring the nexus between tectonic forces operating in the deep lithosphere and the resultant surface processes that together shape the Earth's crust. Through case studies and readings derived from the scientific literature, students will gain insights into how tectonics impacts landscape evolution and the formation of prominent topographic features such as mountain ranges, rift valleys, sedimentary basins, and other landforms, the complex feedbacks between uplift and global climate patterns, and the coupling of deformation, erosion, and exhumation in modern and ancient orogenic systems.

EESC669601
Broader Impacts and Integrated Research Seminar
Shakun, Jeremy D
Spring 2024
There is an increasing emphasis on how scientists and their research impact society. For example, grant proposals to the National Science Foundation must now include Broader Impact statements and explicit plans for how these sorts of activities will be accomplished. This seminar-format course explores the criteria for broader impacts and the ways in which student research can contribute to society and the achievement of desired societal outcomes. All graduate students are welcome, and Ph.D. students are required to take EESC6XXX, typically during their third year of graduate study post-bachelors.

**Advanced Korean I**

**Jeon, Seung Hee**

**Fall 2023**

Conducted in Korean. Satisfies Foreign Language Proficiency core requirement. Advanced Korean I is designed for students who have completed Continuing Korean II, Continuing Korean: Accelerated, or who have equivalent proficiency. Students will consolidate previously learned grammatical patterns and vocabulary through written and audio-visual materials on a variety of topics. By exploring the thesis topics in Korean, students will not only enhance their language skills of listening, reading, speaking and writing in Korean, but will also allow them to better comprehend Korean culture and society. Emphasis will be placed on developing abilities to present opinions and elaborate ideas through discussions and writings. Moreover, Chinese characters will be added in this course with the purpose of expanding vocabulary to the advanced level.

ECON110101
Principles of Economics
Velasquez Javier, Christian Fernando
Summer 2023
This course is an analysis of prices, output, and income distribution through the interaction of households and business firms in a modern Western economy. It also includes an analysis of national income and employment, economic fluctuations, monetary and fiscal policy, inflation, growth, and international aspects of macroeconomic policy. The appropriate role of government intervention is examined, and basic analytical tools are applied to current economic problems. Open to freshmen, sophomores, and juniors. Course is open to seniors by department permission.

The European Union and Lisbon as an Economic, Political & Cultural Gateway
Albuquerque, Rui
Summer 2023
This course offers an introduction to the European Union. We revisit the origins of the EU after World War II and the various stages of growth with countries joining the EU at different points in time. The course discusses the expansion of integration that has taken place in Europe, from the coordination of trade policies, to coordination of economic policies, including monetary policies and integration of local banking sectors, and free movement of capital and labor. The course combines classroom presentations and invited speakers with site visits.

Credits: 3

**Work, Life and Retirement in Ireland and the United States**  
**Rutledge, Matthew S**  
**Summer 2023**  
This course will follow a hypothetical workers career decisions over the course of her life, from graduation to retirement, and explore how differences in the structures of public policy and employer practices result in different outcomes in Ireland versus a comparable worker in the United States. Our aims are: 
- To better understand how those policy differences influence labor market outcomes; and  
- To better understand how those policy differences influence labor market outcomes; and  
- To hone our ability to communicate about those policies and outcomes through concise, well-researched, and interesting written work.

Aspects of Economic Growth
Ozkara, Yusuf
Summer 2023
This course aims at providing both the theory and empirics of modern economic growth theories. In addition to Classical and Neoclassical economic growth approaches, current views such as endogenous growth theory will be discussed. Emphasis will be placed on why some countries lag behind others and ways to solve this problem. The factors that are affecting economic growth such as technology, capital accumulation, change in employment, education, human capital, saving, energy consumption, democracy are studied in detail. The course also addresses the role of financial markets and policy formulation of economic growth.

**Game Theory in Economics**  
**Abraham, Ira L**  
**Summer 2023**  
This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

Monetary Theory and Policy
Kazemi, Hossein S
Summer 2023
This course is an analysis of how the operation and behavior of financial markets are influenced by monetary policy, the actions taken by the Federal Reserve to promote full employment, price stability, and moderate long-term interest rates. Emphasis is placed on studying the interaction between financial intermediaries (e.g., commercial banks, investment banks, mutual funds, hedge funds, etc.) and a nation's central bank. Students are introduced to the modern theories of the demand for and supply of money, as well as their implications for economic activity, the cost of living, employment, and the conduct of monetary policy. Particular emphasis is given to recent Fed policy, including Quantitative Easing and Quantitative Tightening and the impact of these policies on asset prices and long-term interest rates. Furthermore, through an extensive use of Bloomberg in this class students learn how to analyze the impact of these and other Fed policies on the U.S. economy and financial markets to provide a window into how modern practitioners in the discipline follow and respond to changes in U.S. monetary policy.

Prerequisites: macro theory and econometrics.

**Credits:** 3

**Room and Schedule:** On-line Asynchronous

**Satisfies Core Requirement:** None

Public Finance
Kazarosian, Mark V
Summer 2023
This is a course in the microeconomics of the public sector. We will discuss the rationale for the government's role in a market economy, major expenditure programs, and the theory and structure of the tax system. The focus will be on the federal (as opposed to state and local) government's expenditure and tax programs, with special attention given to topics of current concern.

Credits: 3
Room and Schedule: On-line Asynchronous
ECON337202
International Finance
Moorjani, Sanjay
Summer 2023
Not open to students who have taken ECON2271 or ECON3376. International financial markets, international trade and balance of payments issues will be studied by using analytical models of the open economy. Topics of particular interest are exchange rate determination, capital flows, trade flows, and other international linkages between economies. The course will apply the analytical tools of international economics to address macroeconomic aspects of current policy issues such as the global impact of the financial crisis, exchange rate policy, sovereign debt crises, and persistent trade deficits and international indebtedness.

ECON338901
Machine Learning for Economics
Palit, Arnab
Summer 2023
The world we live in is characterized by an exponential increase in data that accurately describe our daily lives, referred to as "big data." To harness this information, new methods like Machine Learning and Artificial Intelligence have emerged, enabling high-dimensional statistical analyses. The aim of this course is to provide students with an introduction to modern data-driven learning, particularly for causal economic analysis. While we will cover the theoretical foundations, our emphasis will be on application and learning how and when to use these methods effectively, as well as identifying their limitations. The coursework comprises homework assignments utilizing simulated and real-world data, weekly online discussions on real-life data analysis problems, and a group project in the form of a case study. We will use R as our primary data analysis software and devote a significant amount of class time to teaching how to efficiently code various analytical models. Prior coding experience is welcome but not necessary, as everything you need to know about R will be taught from scratch.

ECON339501
International Monetary Economics
Magnani, Marco
Summer 2023
The course presents a basic economic analysis of open economy macroeconomics, with a focus on the theory of optimum currency area. These notions are then used to provide a historical and critical analysis of the construction and evolution of the European Monetary Union (EMU) after World War II. In this context, the effects on the Eurozone of the subprime crisis and of the crisis of sovereign debt are examined in depth.

Status: Offered
This course is an analysis of prices, output, and income distribution through the interaction of households and business firms in a modern Western economy. It also includes an analysis of national income and employment, economic fluctuations, monetary and fiscal policy, inflation, growth, and international aspects of macroeconomic policy. The appropriate role of government intervention is examined, and basic analytical tools are applied to current economic problems. Open to freshmen, sophomores, and juniors. Course is open to seniors by department permission.

**Urban Action Lab**  
**Perkins, Taylor A**  
**Fall 2023**
Urban Action Lab is a semester long class that provides students with first hand experience within the field of real estate and urban action, working on projects that advance affordable housing and access to opportunity. Students pursue research projects in partnership with mission driven organizations from across the City of Boston. Each project is completed in collaboration with a partner organization and are selected based on their potential for high-impact contribution to the organization. Project components include research, evaluation, interviewing, and writing. Students will work in close collaboration with partner agencies and fellow students. The class will meet once per week and will occasionally require students to attend meetings off-campus.

ECON170401  
Real Estate and Urban Action: Transforming Communities and Increasing Access to Opportunity  
McCullagh, Neil P; Sanzenbacher, Geoffrey T; Yang, Hongyan  
Fall 2023
The course explores concepts of social economic and racial inequality with a focus on the interaction between housing, labor markets, and the ultimate accumulation of wealth. Housing will be examined through a study of the history of affordable housing, an exploration of the transformation of Columbia Point Public Housing Development to Harbor Point, and an applied simulation. Labor markets will be explored at the theoretical level (e.g., labor supply/demand, human capital, discrimination), before diving into data and literature on how changes over the last 40 years have expanded inequality. The course will conclude with how the lack of both affordable housing and quality labor market opportunities can interact to restrict intergenerational wealth accumulation and opportunity. The course will challenge students to explore and test solutions for transforming distressed communities into safe, desirable neighborhoods that produce better outcomes for all residents through field projects, simulations, and a practical final project.

**Credits:** 3

**Room and Schedule:** Stokes Hall 195S TuTh 12:00 Noon-01:15PM

**Satisfies Core Requirement:** Social Science, Cultural Diversity

**ECON200001**  
**The State of Affordable Housing in the States**  
**Houston, Elizabeth Ann;Korman, Henry A**  
**Fall 2023**
Course offered for Sophomores only. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

ECON221201
Geographic Information Systems for Planning and Decision-Making
Cohen, Will W
Fall 2023
Large quantities of information are available to describe our social and physical environment with high detail, but making sense of this data requires specialized skill sets. Geographic Information Systems (GIS) is a general approach to analysis and is a powerful set of tools for understanding complex problems or for making a compelling argument about issues grounded in the physical or social environment. It is widely used in the public and private sectors. This course will introduce students to the use of GIS and representation as a means of looking at and representing spatial data. Students will learn how to perform the three broad steps of spatial analysis: 1) collecting and organizing data, 2) analyzing this data for appropriate patterns, and 3) using software to represent data on maps to support decision making. STEM-designated.

Financial Forecasting
Mc Gowan, Richard, SJ
Fall 2023
The theory and practice of applied time series analysis will be explored. First the different segments (trend, seasonality, cyclical, and irregular) of a time series will be analyzed by examining the Autocorrelation functions (ACF) and Partial Autocorrelation functions (PACF). The specifics model to model the various types of time series include linear regression, panel regression, seasonal decomposition, exponential smoothing, ARIMA modeling as well as combining models. This course is offered as an online hybrid course. In addition to the online lectures presented on the Canvas LMS, there are three required on-campus class meetings on Saturday mornings. Please see the course syllabus for additional details.

Impact of News on Financial Markets
Kazemi, Hossein S
Fall 2023
The impact of news on financial markets is examined in this course. More specifically, this course studies how Central Banks and Financial Markets react to economic and financial news. Using tools of economics and finance, the impact of macroeconomic data releases, business and financial news, as well as domestic and global political news on the financial markets will be measured and evaluated in this course. It further examines how the markets, including bonds, equities, commodities and foreign exchange markets, react to the news.

Aspects of Economic Growth
Ulusoy, Veysel
Fall 2023
This course aims at providing both the theory and empirics of modern economic growth theories. In addition to Classical and Neoclassical economic growth approaches, current views such as endogenous growth theory will be discussed. Emphasis will be placed on why some countries lag behind others and ways to solve this problem. The factors that are affecting economic growth such as technology, capital accumulation, change in employment, education, human capital, saving, energy consumption, democracy are studied in detail. The course also addresses the role of financial markets and policy formulation of economic growth.

**ECON227701**  
**Environmental Economics and Policy**  
**Sweeney, Richard L**  
**Fall 2023**  
This course provides an introduction to the economics of environmental policy. We begin by examining market failures from externalities and public goods. We then discuss public policy options to correct these failures, and develop tools to assess the costs and benefits of each approach. With this framework in place, the remainder of the course is spent evaluating past efforts to conserve land and improve air and water quality, before concluding with an extensive discussion about global climate change policy.

ECON330801
Game Theory in Economics
Dall'Ara, Pietro
Fall 2023
This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

ECON331701
Economics of Inequality
Sanzenbacher, Geoffrey T
Fall 2023
The course will provide both a theoretical and empirical analysis of economic inequality. This will include analysis and discussion of recent trends in inequality and an examination of the economic causes and consequences of inequality. Specific attention will be paid to the difference between inequality of economic outcomes (e.g., employment status, earnings, and occupation) and inequality of economic opportunity. The course will also touch on economic policy, including discussions of programs designed to combat inequality of outcomes, like welfare and food stamps, as well as those designed to combat inequality of opportunity, like Head Start.

**ECON332401**

**Money and Financial Markets**

**Kazemi, Hossein S**

**Fall 2023**
This course covers topics such as the significance and multiple functions of money in the economy, the behavior of interest rates, the banking system, financial markets, and the management of financial institutions. This course further covers the Federal Reserve System and the conduct of monetary policy, different asset classes, the foreign exchange market, and the international financial system. There is a heavy emphasis on use of market data and the analysis of economic releases—earnings reports, government policy statements, etc.—to provide a comprehensive introduction to the subject. Moreover, through an extensive use of Bloomberg in this class students learn how to access and analyze data and economic releases to provide a window into how modern practitioners in the discipline analyze financial markets. Prerequisites: macro theory and econometrics

**ECON337001**  
**Topics in Applied Econometrics**  
**Maxwell, C C**  
**Fall 2023**  
This is an advanced econometrics/data analytics course and extends ECON2228. Selected topics include linear and non-linear least squares estimation as well as maximum likelihood estimation, including logit/probit, ordered logit/probit and poisson/negative binomial count regression models. A term-long research project is an important part of the course and will entail in-class presentations as well as a submission at the end of the semester. The analytics in the course will be Stata-based, but students in doing their own work, should feel free to work in R, SAS, Python, or whatever their statistical language of choice might be. Examples and datasets are drawn entirely from the sports world. Limited enrollment.

**ECON337203**  
**International Finance**  
**Velasquez Javier, Christian Fernando**  
**Fall 2023**  
Not open to students who have taken ECON2271 or ECON3376 International financial markets, international trade and balance of payments issues will be studied by using analytical models of the open economy. Topics of particular interests are exchange rate determination, capital flows, trade flows, and other international linkages between economies. The course will apply the analytical tools of international economics to address macroeconomic aspects of current policy issues such as the global impact of the financial crisis, exchange rate policy, sovereign debt crises, and persistent trade deficits and international indebtedness.

**Credits:** 3  
**Room and Schedule:** Gasson Hall 203 MW 01:30PM-02:45PM  
**Satisfies Core Requirement:** None

**Corequisites:** None
ECON337901
Financial Economics
Ireland, Peter N
Fall 2023
This undergraduate elective focuses on financial economics, with specific emphasis on asset pricing and the valuation of risky cash flows. After developing and studying the details of consumer decision-making under uncertainty, it uses that general framework as a basis for understanding both equilibrium and no-arbitrage theories of securities pricing, including traditional models like the capital asset pricing model (CAPM), newer Arrow-Debreu theories, and, if time permits, arbitrage pricing theory (APT), the consumption capital asset pricing model (CCAPM), and martingale pricing methods.

ECON338901
Machine Learning for Economics
Palit, Arnab
Fall 2023
The world we live in is characterized by an exponential increase in data that accurately describe our daily lives, referred to as "big data." To harness this information, new methods like Machine Learning and Artificial Intelligence have emerged, enabling high-dimensional statistical analyses. The aim of this course is to provide students with an introduction to modern data-driven learning, particularly for causal economic analysis. While we will cover the theoretical foundations, our emphasis will be on application and learning how and when to use these methods effectively, as well as identifying their limitations. The coursework comprises homework assignments utilizing simulated and real-world data, weekly online discussions on real-life data analysis problems, and a group project in the form of a case study. We will use R as our primary data analysis software and devote a significant amount of class time to teaching how to efficiently code various analytical models. Prior coding experience is welcome but not necessary, as everything you need to know about R will be taught from scratch.

ECON772001
Math for Economists
Ireland, Peter N
Fall 2023
"Economics studies the efficient allocation of scarce resources." It follows almost immediately from this definition that while verbal and graphical analyses are often helpful too, economists derive their sharpest and most powerful results by setting up and solving constrained (because resources are "scarce") optimization (because allocations should be "efficient") problems. Hence, this course introduces first-year graduate students to variety of techniques for doing just that: setting up and solving constrained optimization problems. Specific methods covered include those based on the Kuhn-Tucker and envelope theorems, the maximum principle, and dynamic programming. Note that since this is a "math for economists course", its emphasis is not so much on stating and proving theorems but on developing an intuitive understanding of how and why each method works and determining when one particular approach may be easier or more convenient than all others to apply to a specific problem.

ECON775001
Macroeconomic Theory I
Schiantarelli, Fabio
Fall 2023
The course covers the standard models of exogenous and endogenous growth, mostly in a deterministic setting: The Solow-Swan model without and with human capital, the Ramsey growth model with infinitely lived optimizing agents, overlapping generation models without and with altruism, fiscal policy, models with human capital, basic AK models of endogenous growth, two sector models of endogenous growth, product variety models and Schumpeterian growth models. We will also review some crucial empirical papers on applied growth, starting from those on the fundamental causes of growth. In the last part of the course we cover the Ramsey model in discrete time with a stochastic technology shock and the choice of investment with adjustment costs and consumption in a stochastic setting.

**Time Series Econometrics**
Xiao, Zhijie  
Fall 2023  
This course covers major advances in time series analysis. In addition to univariate and multivariate models for stationary time series, it addresses the issues of unit roots and cointegration. The Kalman Filter and time series models of heteroskedasticity are also discussed. The course stresses the application of technical tools to economic issues, including testing money-income causality, stock market efficiency, the life-cycle model, and the sources of business cycle fluctuations.

Industrial Organization I
Murry, Charles T
Fall 2023
This course studies imperfect competition among firms, with an emphasis on empirical work. We learn how to implement empirical methods commonly used in Industrial Organization (IO), and how to read, and ultimately write, papers in empirical IO. Topics covered include demand estimation, auctions, price discrimination, bundling, asymmetric information and adverse selection, vertical control and contractual arrangements, and others as time allows. Each topic will be organized around recent empirical work. Throughout, we will consider the importance of identification in empirical studies.

Game Theory and Applications
Ekmekci, Mehmet
Fall 2023
In this elective advanced Graduate Class, we will cover many topics and problems that fall under the category game theory with more emphasis on dynamic games and repeated games. Although we will study some topics of dynamic games with complete information, there will be a disproportionate weight on problems with asymmetric information, and problems in which there are elements related to learning. More specifically, we will study Repeated Games, Reputation Games, Bargaining, Experimentation and Information Aggregation. Students should have a strong background in Mathematical tools used in economics, and should have taken an advance undergraduate course in Game Theory, and/or first year Graduate Micro sequence.

Principles of Economics
Zhang, Liang
Spring 2024
This course is an analysis of prices, output, and income distribution through the interaction of households and business firms in a modern Western economy. It also includes an analysis of national income and employment, economic fluctuations, monetary and fiscal policy, inflation, growth, and international aspects of macroeconomic policy. The appropriate role of government intervention is examined, and basic analytical tools are applied to current economic problems. Open to freshmen, sophomores, and juniors. Course is open to seniors by department permission.

ECON120801
Urban Action Lab
McCullagh, Neil P; Perkins, Taylor A
Spring 2024
Urban Action Lab is a semester long class that provides students with first hand experience within the field of real estate and urban action, working on projects that advance affordable housing and access to opportunity. Students pursue research projects in partnership with mission driven organizations from across the City of Boston. Each project is completed in collaboration with a partner organization and are selected based on their potential for high-impact contribution to the organization. Project components include research, evaluation, interviewing, and writing. Students will work in close collaboration with partner agencies and fellow students. The class will meet once per week and will occasionally require students to attend meetings off-campus.

**ECON170201**  
**Life, Liberty & Heath: The Economics, Policy and Law of Healthcare**  
**Regan, Tracy L**  
**Spring 2024**  
This is an Enduring Question course and is open to FRESHMEN only. You must take UNAS1702 with this course. Recently, health has become a central focus of political infighting, public discord, and personal worry. Heath care and health insurance now dominate everything from think tanks to Jimmy Kimmel Live! Meanwhile, concussions go up, NFL ratings go down, drug prices soar, and opioid abuse damages individuals, families, and the health care system, and the economy. Such complex issues are best understood through interdisciplinary study. These paired classes will introduce basic principles of economics, law, and public policy through the lens of contemporary problems involving enduring questions of government authority and individual autonomy, morality, and ethics, social justice, and human rights.

**Credits:** 3  
**Room and Schedule:** Stokes Hall 103S MW 12:00 Noon-01:15PM  
**Satisfies Core Requirement:** Social Science, Cultural Diversity

Financial Forecasting
Mc Gowan, Richard, SJ
Spring 2024
The theory and practice of applied time series analysis will be explored. First the different segments (trend, seasonality, cyclical, and irregular) of a time series will be analyzed by examining the Autocorrelation functions (ACF) and Partial Autocorrelation functions (PACF). The specifics model to model the various types of time series include linear regression, panel regression, seasonal decomposition, exponential smoothing, ARIMA modeling as well as combining models. This course is offered as an online hybrid course. In addition to the online lectures presented on the Canvas LMS, there are three required on-campus class meetings on Saturday mornings. Please see the course syllabus for additional details.

The impact of news on financial markets is examined in this course. More specifically, this course studies how Central Banks and Financial Markets react to economic and financial news. Using tools of economics and finance, the impact of macroeconomic data releases, business and financial news, as well as domestic and global political news on the financial markets will be measured and evaluated in this course. It further examines how the markets, including bonds, equities, commodities and foreign exchange markets, react to the news.

ECON287601  
Development and Social Justice in Korea  
Hwang, Ingu  
Spring 2024  
This course introduces students to the political and economic changes that South Korea experienced from the 1960s to the present and explores how these changes contributed to social unrest, to demands for greater democracy, and to other social justice issues. In doing so, it will address how South Korea's economic and political trajectory was informed by pressures at the international, national, and sub-national level and compare the South Korean case to that of other Asian nations. Fulfills the LAMA requirement for History Majors.

ECON324201  
Economics of Aging  
Rutledge, Matthew S  
Spring 2024  
In a world facing the challenges associated with rapidly aging populations, the tools of economics will be essential to designing effective public policy solutions. This course first describes the institutional environment—including Social Security, Medicare, Medicaid, and employer retirement plans—in which individuals and families make decisions about their older years. It also debates potential reforms that aim to resolve the shortcomings and inequities of those policies and to put them on sounder fiscal footing. Then students will conduct their own empirical research with the same survey data used by professional economists, and learn how to effectively communicate the results to a broader audience.

ECON330801
Game Theory in Economics
Sonmez, Tayfun O
Spring 2024
This course is an introduction to game theory. Game theory consists of a coherent set of concepts and analytical tools to examine interactive or strategic situations between people, that is, situations where the well being of one actor depends not only what s/he does but also on what others do. Hence in deciding how best to act, each person needs to consider how others are likely to act as well. Game theory has become a widely used tool of analysis in a wide range of disciplines, including economics, business, political science, law, and international relations.

ECON330901
Game Theory and Social Behavior
Hoffman, Moshe
Spring 2024
We apply insights from game theory to explain human social behavior, focusing on novel applications which have heretofore been the realm of psychologists and philosophers--for example, why people speak indirectly, in what sense beauty is socially constructed, and where our moral intuitions come from--and eschewing traditional economic applications such as industrial organization or auctions.

ECON331201
Evolutionary Economics
Cox, Donald
Spring 2024
This course uses evolutionary biology to better understand the psychology of preferences, a central concept in economics. Why are people risk averse? Impatient? What explains novelty seeking, habits, addictions? What makes parents provide for children? We will use evolutionary thinking to explore these and a host of other diverse topics: violence, adolescent risk taking, sexual behavior, mating preferences, marriage and divorce, rearing and investing in children, extended families, trade and specialization, cooperation and conflict, cults and gangs, religion, and interactions between genetic and cultural forces. This course has an intensive research and writing requirement and enrollment is limited. You should be comfortable using Stata.

Prerequisites: Micro theory and econometrics.

Behavioral Economics and social psychology have revealed many surprising quirks of social behavior, providing robust evidence that people deceive themselves, are systematically overconfident, believe implausible things to avoid inconsistency, and so on. This course will demonstrate that we can make sense of these seeming irrationalities through understanding how incentives shape behavior. We begin by understanding how genetic and cultural evolution shaped us to respond to certain incentives, including material resources and the social rewards (peer approval, a good reputation, etc.) that have long been associated with resources and mating opportunities. We then investigate how incentives operate in both blatant and subtle ways to motivate our behavior, applying this lens to many of the greatest hits from behavioral economics and social psychology, including confirmation bias, strategic ignorance, insensitivity to impact in charitable giving, and more. Assignments will focus on how to evaluate empirical research and test explanations convincingly.

ECON332401
Money and Financial Markets
Kazemi, Hossein S
Spring 2024
This course covers topics such as the significance and multiple functions of money in the
economy, the behavior of interest rates, the banking system, financial markets, and the
management of financial institutions. This course further covers the Federal Reserve System and
the conduct of monetary policy, different asset classes, the foreign exchange market, and the
international financial system. There is a heavy emphasis on use of market data and the analysis
of economic releases—earnings reports, government policy statements, etc.—to provide a
comprehensive introduction to the subject. Moreover, through an extensive use of Bloomberg
in this class students learn how to access and analyze data and economic releases to provide a
window into how modern practitioners in the discipline analyze financial markets. Prerequisites:
macro theory and econometrics

Credits: 3
Room and Schedule: O’Neill Library 253 TuTh 01:30PM-02:45PM
Satisfies Core Requirement: None
Prerequisites: ECON2202; ECON2228. Not open to students who have completed ECON3361;

ECON332601
Experimental Economics
Coffman, Lucas
Spring 2024
This course is for anyone who wants to be able to answer questions using experiments. This course is an introduction to experimental methods, particularly those developed by economists. We will discuss in detail all of the steps of an experiment, from design, measurement and randomization, to cost and power analyses. This is strictly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods, not a foundation of famous experimental results. Nonetheless, we will cover experiments in a variety of interesting fields: behavioral economics, economics of developing countries, discrimination, labor economics, cognitive and social psychology, and more. There are two main value-addeds from this course. First, you will be equipped to design and run an experiment to answer important questions. Second, in understanding what the optimal experimental design should look like, you will be armed with better lenses through which to view naturally existing data.

**Credits: 3**

**Room and Schedule:** Gasson Hall 201 TuTh 09:00AM-10:15AM

**Applying Economic Theory in the Practice of Law**

**Felter, John K**

**Spring 2024**

In this seminar, we will investigate, discuss, and write about how the economic theory that you are learning can be applied in several areas of substantive and procedural law. We will apply both traditional (neoclassical) and behavioral economic theory. We will perform both positive and normative analyses. Among many other law and economics topics, we will explore how, thinking like economists, will enable you to analyze: the allocation and transfer of property rights, the effectiveness, efficiency and fairness of criminal laws, the deterrence and compensation goals of the tort (accident) law system, the effectiveness and efficiency of the laws and rules that govern the United States judicial system, applying game theory, why civil legal disputes are commenced and often, but not always, settle, the use or misuse of statistics and expert evidence, the efficiency and accuracy of jury trials, the effects of allocating attorneys' fees and fee-shifting in civil litigation, and the costs and benefits and operation of the United States patent law system. Throughout the semester, the emphasis will always be on how the economic theory that you are learning can be applied in the practice of law in real world situations.

**Credits:** 3

**Room and Schedule:** Gasson Hall 302 MW 10:30AM-11:45AM

**Satisfies Core Requirement:** None

**Prerequisites:** ECON2201 and ECON2228
This course will introduce students to the methodology of labor economics from both institutional and neoclassical perspectives. The principal emphasis will be on neoclassical theory and empirical work dealing with the supply and demand for labor; the operation of the labor market; the determination of wages; and the impact of trade unions and collective bargaining. Special emphasis will be placed on applications of theory and empirical findings to policy questions. This course requires research writing.

**ECON334801**  
**Economics of Electricity Markets**  
**Copland, Andrew G**  
**Spring 2024**  
Every five minutes of every hour, of every day, of every year, virtual auctions set clearing prices and quantities for electricity markets in New England. This process, along with related markets, drives $10+ billion to change hands every year, and is replicated (with slight differences) in six other regions across the United States. When it works well, it is a little noticed backbone of modern life. When problems arise, cities can be plunged into prolonged rolling blackouts with devastating consequences. While well briefly examine standard models of resource economics, this class will spend the significant majority of its time thoroughly analyzing the history, present state, and possible futures of electricity markets, with a particular focus on the industry in the United States. Well use economic reasoning to consider pressing challenges facing the industry, such as the incorporation of decarbonization and green technologies into our electric grid, how battery storage is changing the energy landscape, and how to prepare for the coming electrification of transportation and heating.

Micro Public Policy Analysis
Quinn, Joseph F
Spring 2024
Enrollment limited; significant writing/research component. This is a seminar on the economic analysis of current microeconomic public policy issues. During the first half of the course, students will read and discuss articles on selected topics and prepare first drafts of papers on topics of their choice. The second half of the course will be run like a professional economics conference. Students will read and critique others' papers, present their drafts to the class, and revise their papers on the basis of the comments received.

ECON336501  
Public Finance  
McHugh, Christopher  
Spring 2024  
This is a course in the microeconomics of the public sector. We will discuss the rationale for the government's role in a market economy, major expenditure programs, and the theory and structure of the tax system. The focus will be on the federal (as opposed to state and local) government's expenditure and tax programs, with special attention given to topics of current concern.

Credits: 3  
Room and Schedule: O'Neill Library 257 MW 04:30PM-05:45PM  
Satisfies Core Requirement: None

ECON337201
International Finance
Velasquez Javier, Christian Fernando
Spring 2024
Not open to students who have taken ECON2271 or ECON3376 International financial markets, international trade and balance of payments issues will be studied by using analytical models of the open economy. Topics of particular interests are exchange rate determination, capital flows, trade flows, and other international linkages between economies. The course will apply the analytical tools of international economics to address macroeconomic aspects of current policy issues such as the global impact of the financial crisis, exchange rate policy, sovereign debt crises, and persistent trade deficits and international indebtedness.

This course examines development economics and development policy. The purpose is to understand the lives of the poor and the economies of poor countries in order to understand what—if anything—can be done to improve their lives. We will consider what might be holding the poor back including population growth, lack of education, poor health, corruption, and institutional impediments such as poorly developed or tightly constrained markets. This course is appropriate for economics majors as well as for majors in international studies with the appropriate prerequisites.

Credits: 3

ECON337601
International Economic Relations
Anderson, James
Spring 2024
Not open to students who have taken ECON3371 or ECON3372. This course introduces the study of economic relations among countries. It combines material contained in ECON3371 and ECON3372, and substitutes for both those courses. Primarily designed for international studies majors, it is also appropriate for economics and other social science majors, with the proviso that the comprehensive coverage of the course implies that the workload is heavy and expectations for students are high. Topics include the determinants of trade in goods, services, and capital; the economic policies that nations use to influence such trade; the theory and practice of international macroeconomics; and problems of coordinating macroeconomic policies among countries. The course features the usefulness (and limitations) of game theory for explaining international economic interactions.

Credits: 3
Room and Schedule: O'Neill Library 257 TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
Prerequisites: Permission of Department
ECON337901
Financial Economics
Ireland, Peter N
Spring 2024
This undergraduate elective focuses on financial economics, with specific emphasis on asset pricing and the valuation of risky cash flows. After developing and studying the details of consumer decision-making under uncertainty, it uses that general framework as a basis for understanding both equilibrium and no-arbitrage theories of securities pricing, including traditional models like the capital asset pricing model (CAPM), newer Arrow-Debreu theories, and, if time permits, arbitrage pricing theory (APT), the consumption capital asset pricing model (CCAPM), and martingale pricing methods.

ECON338901
Machine Learning for Economics
Palit, Arnab
Spring 2024
The world we live in is characterized by an exponential increase in data that accurately describe our daily lives, referred to as "big data." To harness this information, new methods like Machine Learning and Artificial Intelligence have emerged, enabling high-dimensional statistical analyses. The aim of this course is to provide students with an introduction to modern data-driven learning, particularly for causal economic analysis. While we will cover the theoretical foundations, our emphasis will be on application and learning how and when to use these methods effectively, as well as identifying their limitations. The coursework comprises homework assignments utilizing simulated and real-world data, weekly online discussions on real-life data analysis problems, and a group project in the form of a case study. We will use R as our primary data analysis software and devote a significant amount of class time to teaching how to efficiently code various analytical models. Prior coding experience is welcome but not necessary, as everything you need to know about R will be taught from scratch.

ECON885601
Experimental Economics
Coffman, Lucas
Spring 2024
This class is an introduction to experimental methods in economics. We will cover all the steps of an experiment from design, measurement, and randomization to practical considerations like cost and power analyses. This is mainly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods (e.g., lab, field, and online studies, experiments in developing countries, interventions in organizations, and so on). The course is not intended to provide a foundation of famous experimental results overall or for any one topic. The take-away of the course is to develop the ability to design a confound-free experiment regardless of question or context.

**ECON887301**  
**Empirical Methods in Macroeconomics and Finance**  
**Guerron, Pablo A**  
**Spring 2024**  
We will study econometric models and methods that are useful to conduct substantive empirical research in macroeconomics and finance. We consider the estimation and evaluation of dynamic stochastic general equilibrium models, analysis of linear and nonlinear vector autoregressive models, time series models with regime switches and time-varying coefficients, as well as dynamic factor models. For the most part, we will focus on Bayesian methods of inference, with detailed discussions of suitable Markov-Chain-Monte-Carlo methods.

ECON887401
International Macroeconomics
Nosal, Jaromir B
Spring 2024
This course will focus on the construction of models for understanding the international business cycle and analysis of macroeconomic policy in open economies. The first part will focus on the transmission of macroeconomic shocks across countries, from the international real business cycle literature to models with nominal rigidity and financial imperfections. The second part will cover the recent literature on macroeconomic policy in open economies. The third portion of the course will return to model building and shock transmission and focus on the recent literature at the intersection between international trade and macroeconomic theory.

Innovation through Design Thinking
Gaudette, Glenn R
Summer 2023
Would you like to be innovative in whatever you pursue? Innovation is about solving important and complex problems to create value for the greater good. Innovating through design thinking is a structured, human-centered process for creatively solving problems, which can be adopted by anyone. In this foundational course we will introduce the mindset, process and methods at the core of design thinking. Students will see inspiring case studies, hear from cutting edge practitioners, and work on a project to internalize this learning. Students will discover design thinking is a practical toolkit that helps them reliably innovate in the face of changing social needs, business disruptions, and technology shifts.

ENGR170201
First-Year Human-Centered Engineering Reflection 1
Gaudette, Glenn R
Fall 2023
Students will engage in weekly reflection sessions designed to integrate experiences in the HCE classroom with broader questions about the relationship between engineering, design, and society. Drawing on a variety of reflection practices, students will consider the role of engineering knowledge in complex sociotechnical systems, what it means to do human-centered engineering for the common good, the moral and ethical dimensions of engineering practice, and their own formation as students and individuals.

ENGR180101
Making the Modern World: Design, Ethics & Engineering
Krones, Jonathan S; Perreault, Luke; Rodriguez, Hector E; Tonn, Jenna A
Fall 2023
Together we will consider how engineers and other stakeholders navigate risks related to industrial and environmental disasters; balance financial, technological, and regulatory pressures associated with complex socio-technical problems; and negotiate technical and political liabilities surrounding artificial intelligence, surveillance, and climate adaptation. Students will collaborate on group design projects based on human-centered engineering. Engineering systems present pressing technical, ethical, and moral problems that we must grapple with as engaged global citizens. In this class students will explore the social, cultural, and institutional history of engineering; learn foundational skills in quantitative analysis of real-world engineering designs; and understand the political, environmental, economic, and ethical tradeoffs associated with building the modern world. This is a Complex Problems course and includes a required lab and reflection.

ENGR210101
Engineering Foundations Studio I
Mohebbi, Amin
Fall 2023
This course is designed to help students begin to mechanically analyze the physical objects in the world around them. Students will learn how to look at systems and determine how to model the forces and reactions for statically determinate systems. The course will also cover math topics including integrals and their applications, vectors, vector functions, vector calculus (introductory level). Fundamental themes of materials science-- structure-property-processing relationships in materials, specifically metals, ceramics, and plastics will also be investigated.

Credits: 3
Room and Schedule: MWF 02:00PM-02:50PM; Service Building, Materials Classroom
Satisfies Core Requirement: None
Prerequisites: MATH1102 and MATH1103 and PHYS2200

Engineering for Society
Gaudette, Glenn R
Fall 2023
In this course, we will learn and practice engineering tools and techniques to work on engineering problems while focusing on societal benefit and the human experience. The tools and techniques will comprise those from, but not be limited to, mechanical, electrical, and industrial engineering. A majority of the course sessions will be facilitated in a project-based modality where we will learn the tools and techniques in the context of the problems we work on.

ENGR311001
Advanced Engineering Foundations: Materials
Salifu, Ali A
Fall 2023
This is a two-part introductory course in Materials Science and Engineering. In the first part, students will learn about the fundamentals of materials, initially focusing on the concepts of atomic structure, interatomic bonding, and the structure of solids, which are essential to understanding the structure and properties of different types of materials. This will be followed by discussions of different material types metals, alloys, ceramics, polymers, and composites in terms of their structure, properties, and mechanical behavior. In the second part of the course, students will then delve deeper into biomaterials and energy & environmental materials depending on their concentration, with an emphasis on material properties, design, and selection for different applications.

ENGR370201
Third-Year Human-Centered Engineering Reflection 1
Brace, Emma
Fall 2023
Students will participate in weekly reflections designed to integrate experiences in the HCE classroom with broader questions about the relationships among engineering, design, and society. In the third year, students will explore ideas of engineering identity, service-based engineering, and the what it means to engage with communities during engineering project work.

Credits: 0
Room and Schedule: Service Building, Active Learning Classroom 001; W 04:00PM-04:50PM

Engineering Courses: Spring 2024

ENGR102501
Innovation through Design Thinking
Bhattacharya, Sunanda; O'Brien, Edward F; Rutirasiri, Chokdee R
Spring 2024
Would you like to be innovative in whatever you pursue? Innovation is about solving important and complex problems to create value for the greater good. Innovating through design thinking is a structured, human-centered process for creatively solving problems, which can be adopted by anyone. In this foundational course we will introduce the mindset, process and methods at the core of design thinking. Students will see inspiring case studies, hear from cutting edge practitioners, and work on a project to internalize this learning. Students will discover design thinking is a practical toolkit that helps them reliably innovate in the face of changing social needs, business disruptions, and technology shifts.

Credits: 3
Room and Schedule: Active Learning Classroom 001 TuTh 06:00PM-07:30PM
Satisfies Core Requirement: None
Prerequisites: None

ENGR110101
Introduction to Human-Centered Engineering
Hira, Avneet
Spring 2024
In this course, we will learn about and practice engineering methods to tackle design problems through a human-centered lens. These methods include introductory work with: mathematical models, statistics, physical prototyping, computer-aided design, decision-making approaches, and observation and interview techniques. We will learn how these methods can be employed while working on a design problem, including problem formulation, data analysis, design trade-offs, concept selection, and design deployment. At the end of this course, we will have a working understanding of how human-centered engineers think and work.

Credits: 4
Room and Schedule: 245 Beacon Street Room 311 MWF 10:00AM-11:50AM
Satisfies Core Requirement: None
Prerequisites: Open to Human-Centered Engineering Majors Only.

ENGR110301
Engineering Analysis Lab
Ranger, Bryan J
Spring 2024
In this course, students will apply integral calculus and scientific principles to develop analytical solutions for engineering problems. Students will learn how to devise experiments, collect and analyze data, and conduct basic error analysis. The course will be structured as individual experimental modules to get hands-on experience with fundamental instruments including power supplies, sensors, electromechanical components, and computer-based data acquisition systems. Following this course, students will be equipped to apply quantitative analytical techniques to a variety of practical engineering problems.

Credits: 2
Room and Schedule: 245 Beacon Street Room 302 Tu 12:00 Noon-12:50PM
245 Beacon Street Room 302 Th 10:30AM-12:30PM

ENGR110501
Engineering Computation and Programming
Rodriguez, Hector E
Spring 2024
In this course, students will be introduced to computational tools used in engineering through the MATLAB computing and programming environment. Students will also learn and apply fundamental concepts from linear algebra to solve engineering problems computationally. Topics to be introduced include loops, functions, arrays, matrices, and vectors. Students will be expected to complete weekly assignments and a final project in which students will use the MATLAB computing environment to solve an appropriately scoped computing/engineering problem.

**Credits:** 3  
**Room and Schedule:** Digital Experience Lab Room 100; TuTh 09:00AM-10:15AM  
**Satisfies Core Requirement:** None

ENGR170301
First-year Human-Centered Engineering Reflection 2
Gaudette, Glenn R
Spring 2024
Students will continue to engage in weekly reflection sessions designed to integrate experiences
in the HCE classroom with broader questions about the relationship between engineering,
design, and society. Drawing on a variety of reflection practices, students will consider the role
of engineering knowledge in complex sociotechnical systems, what it means to do human-
centered engineering for the common good, the moral and ethical dimensions of engineering
practice, and their own formation as students and individuals.

In this course, students will be introduced to thermodynamics and transport phenomena (fluid mechanics, heat transfer, and mass transfer). Students will first learn about thermodynamics (from the engineering perspective) to understand how systems interact with their surroundings. This will be done from the context of the laws of thermodynamics (zeroth, first, and second) and the concepts of work, heat, internal energy, enthalpy, entropy, and the Carnot cycles. This knowledge will then feed into discussions of the three transport processes (fluid mechanics, heat transfer, and mass transfer) from the context of the laws of conservation of momentum, energy, and mass.

ENGR210401
Engineering Foundations Studio IV
Krones, Jonathan S
Spring 2024
In this course students will be introduced to the analysis of complex engineering systems in the real world. Students will learn several quantitative methods for modeling engineering systems including simple and complex networks and material flow analysis. Mathematical concepts of probability and statistics such as Poisson processes, return periods, and error propagation will be applied to various engineering domains. Students will also be introduced to engineering economics and life cycle assessment for situating engineering decisions within their economic, social, and environmental contexts.

Engineering Foundations Studio V

Perreault, Luke

Spring 2024

In this course students will conduct semester-long projects in human-centered engineering analysis. In small groups and with a faculty advisor, students will identify a topic of interest in the domains of health, energy, or the environment; conduct background research using literature sources; define a problem and an appropriate engineering methodology; execute their analysis; and prepare a report of their conclusions. Students will be expected to identify and apply mathematical, scientific, and engineering concepts relevant to their project. Students will gain experience with project management, teamwork, and professional communication.

Introduction to Statistical Data Analysis and Machine Learning
Mohebbi, Amin
Spring 2024
This course offers a comprehensive exploration of MATLAB’s applications in the field of data science and machine learning. Throughout the program, students will engage in practical scripting and problem-solving, master data visualization techniques, and analyze data distributions and statistics. The course covers essential topics such as hypothesis testing, regression analysis, and the fundamentals of neural networks, equipping students with the skills to construct neural networks and integrate MATLAB into machine learning workflows. With a focus on supervised and unsupervised learning, students will learn to classify, regress, and cluster data while evaluating model performance and applying machine learning to real-world problems. Additionally, students will gain hands-on experience implementing clustering algorithms like K-Means and hierarchical clustering in MATLAB, concluding with insightful case studies and practical examples showcasing the versatility and power of data analysis with novel tools in engineering, mathematics, and scientific disciplines.

The course covers essential topics such as hypothesis testing, regression analysis, and the fundamentals of neural networks, equipping students with the skills to construct neural networks and integrate MATLAB into machine learning workflows. With a focus on supervised and unsupervised learning, students will learn to classify, regress, and cluster data while evaluating model performance and applying machine learning to real-world problems. Additionally, students will gain hands-on experience implementing clustering algorithms like K-Means and hierarchical clustering in MATLAB, concluding with insightful case studies and practical examples showcasing the versatility and power of data analysis with novel tools in engineering, mathematics, and scientific disciplines.

ENGR322001  
Biomedical Imaging  
Ranger, Bryan J  
Spring 2024
Biomedical imaging is a rapidly evolving and interdisciplinary field that plays a crucial role in diagnosis, treatment planning, and research. In this course, students will learn the fundamental principles underlying various biomedical imaging modalities such as optical imaging, x-ray, computed tomography, magnetic resonance imaging (MRI), and ultrasound. Students will develop proficiency in image acquisition, processing, and interpretation techniques, including machine learning-based image analysis. We will investigate the latest advancements in imaging technologies and their potential impact on healthcare and medical research, and also explore ethical and safety considerations in biomedical imaging. Students will gain practical hands-on experience with imaging equipment and software through lab modules, case studies, and collaborative projects.

**Credits:** 3  
**Room and Schedule:** 245 Beacon Street Room 311 TuTh 03:00PM-04:15PM  
**Satisifies Core Requirement:** None  
**Prerequisites:** Calculus II (MATH1101 or MATH 1103) Engineering Foundations Studio II (ENGR2102) or Physics II (PHYS2101 or PHYS2201).  
**Corequisites:** None  
**Cross-listed with:** None  
**Frequency:** Every Spring

ENGR332001

*Quantitative Sustainable Design*

Brace, Emma

Spring 2024
This is a project-based course that focuses on the application of quantitative sustainable design (QSD) to energy technologies. QSD is a framework linking design and operational decisions to sustainability indicators to inform decision-making. This allows for navigation of trade-offs across environmental, economic, and social dimensions of sustainability. In this course students will learn methods for economic analyses (TEA - techno-economic analysis, LCC - life cycle costing) and environmental sustainability assessment (LCA - life cycle assessment) as well as uncertainty and sensitivity analyses. Students will apply this process to a semester-long design project of an energy technology of interest.

**Credits:** 4

**Room and Schedule:** 245 Beacon Street Room 302 TuTh 01:30PM-02:45PM

**Satisfies Core Requirement:** None

**Prerequisites:** MATH1100/1102 (Calc I) or higher; CHEM 1109/1111 (Gen Chem I with Lab) or higher

**Corequisites:** None

**Cross-listed with:** None

**Frequency:** Annually

**Student Level:** Undergraduate

This course will introduce students to water quality engineering, the branch of environmental engineering concerned with the treatment of water and wastewater. We will examine sources of water contaminants, including pathogens and chemical pollutants, and discuss the risks these contaminants pose to human health and the environment. Students will learn about the physical, chemical, and biological processes that govern contaminant fate in natural and engineered water systems. Through inquiry-based laboratories, students will apply analytical techniques for measuring water quality to assess water treatment processes. A collaborative course project will address emerging challenges in water quality and resource recovery.

Credits: 4
Room and Schedule: Material Analysis Room 008; TuTh 12:00 Noon-01:15PM
Satisfies Core Requirement: None
Prerequisites: Calculus I: (MATH1100) or (MATH1102) or (MATH1002 and MATH1003) or equivalent; General Chemistry I w/ Lab: (CHEM1109 and CHEM1111) or equivalent

ENGR370301
Third-Year Human-Centered Engineering Reflection 2
Brace, Emma
Spring 2024
Students will continue to engage in weekly reflections designed to integrate experiences in the HCE classroom with broader questions about the relationships among engineering, design, and society. In the third year, students will explore potential career paths in addition to ideas of engineering identity, service-based engineering, and what it means to engage with communities during engineering project work.

Credits: 0
Room and Schedule: 245 Beacon Street Room 302 M 02:00PM-02:50PM
Satisfies Core Requirement: None
Prerequisites: Open to Human-Centered Engineering Majors only.
Corequisites: None
Cross-listed with: None

ENGL101001
First Year Writing Seminar
Hincks, Martha M
Summer 2023
Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

Credits: 3
Room and Schedule: On-line Asynchronous
Satisfies Core Requirement: Writing
Prerequisites: None
Corequisites: None
Cross-listed with: None

ENGL108001
Literature Core
DeRosa, Marla C
Summer 2023
In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: www.bc.edu/literaturecore

Credits: 3
Room and Schedule: Stokes Hall 205S MTuWThF 10:00AM-11:30AM
Satisfies Core Requirement: Literature

ENGL340101
Science Fiction
Kaplan-Maxfield, Thomas
Summer 2023
This is a course on the genre of literature known as "Science Fiction," "SF," or "scifi." Since this is a genre course, we will spend a bit of time discussing the definition of scifi, how there are many definitions that are not agreed upon, and what that tells us about the type of literature. We'll set the genre within the historical context of Enlightenment Rationalism and Romanticism's response to it, early nineteenth century Industrialism and the rise of machines. Class will consist of a bit of lecture followed mainly by discussions of the stories and books, within the terms set out above. We will read stories from Wells and Verne and novels from Asimov to Butler to see what scifi tells us about ourselves and where we are going. Three papers required plus a midterm and final.

English Courses: Fall 2023

ENGL100901
First Year Writing Seminar for Multilingual Students
Wilwerding, Lauren
Fall 2023
Limited to 15 students; Satisfies core requirement for writing; Department Permission Required
This course, the first half of a year-long sequence of core English courses, is designed for students whose first language is something other than English. In this workshop, students will develop a portfolio of personal and academic writing and provide ongoing feedback to one another as part of a writing community. They will write and rewrite essays throughout the semester, discuss their works-in-progress, and receive feedback during individual conferences with the instructor. Students read a wide range of texts and consider the structure and organization of English rhetoric as they work to develop their own prose. Seats are prioritized for students who have been recommended for targeted language support. This course may be taken in place of ENGL 1010. Students place into this course based on BC's English Writing Assessment taken during the summer prior to freshmen year or in consultation with the director of the program, lynne.anderson@bc.edu

Credits: 3
Room and Schedule: Stokes Hall 131S MWF 10:00AM-10:50AM

ENGL101036
First Year Writing Seminar
Reardon, Katherine B
Fall 2023
Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

ENGL101069
First Year Writing Seminar
Ehrich, Sarah C
Fall 2023
Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

ENGL108001
Literature Core
DEPT
Fall 2023
In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: www.bc.edu/literaturecore

ENGL109301
An Introduction to Modern Irish I
Cahill, Sean R
Fall 2023
This course continues in second semester as ENGL1094. This course offers beginners an enjoyable introduction to the language and culture of Ireland. We'll learn how to speak Gaelic and read modern Irish texts and poetry. And we'll examine major themes in Irish history and culture associated with the rise and fall of the language over its long history. This course counts towards your Irish Studies minor, and one towards your English major. In the spring semester, you can build on what you've gained and, if you wish, satisfy the Morrissey College of Arts and Sciences language proficiency requirement by completing the four-course cycle the following year.

Credits: 3

**ENGL118401**

**Lit Core: Literature, Testimony, Justice**

**Harrison-Kahan, Lori**

**Fall 2023**

This section of Literature Core will explore how literary texts bear witness to historical events and address social issues. Through the study of poetry, fiction, drama, and autobiography, we will examine how writers have used a variety of literary genres and forms to transform traumatic memories and the experiences of displacement and oppression into art. Topics include slavery and the Holocaust. Texts may include Herman Melville's Benito Cereno, Narrative of the Life of Frederick Douglass, Toni Morrison's Beloved, Art Spiegelman's Maus, Tommy Orange's There There, and The Laramie Project.

**Credits:** 3

**Room and Schedule:** Stokes Hall 103N TuTh 10:30AM-11:45AM

Through the study of poetry, fiction, drama, and autobiography, we will examine how writers have used a variety of literary genres and forms to transform traumatic memories and the experiences of displacement and oppression into art. Topics include slavery and the Holocaust. Texts may include Herman Melville's Benito Cereno, Narrative of the Life of Frederick Douglass, Toni Morrison's Beloved, Art Spiegelman's Maus, Tommy Orange's There There, and The Laramie Project.

ENGL172401
Nature and Power: Reading the American Place
Matson, Suzanne M
Fall 2023
Writers since Meriwether Lewis have tried to know the great diversity of American landscape through acts of language. In this course we'll ask how poems, essays, and fiction depict American encounters with nature: As the unknown other to be conquered? As access to a spiritual dimension? As a site of contested claims for use and power? How have these many meanings we've assigned our landscapes shifted in the face of environmental degradation? Our readings, discussion, and writing will focus on how the American psyche has been influenced by both a fear of, and a love of, what is "wild."

**Credits:** 3  
**Room and Schedule:** Carney Hall 302 TuTh 09:00AM-10:15AM

ENGL172801
The Value of Work: Significance through Literature
Hunt, Aeron P
Fall 2023
This is an Enduring Questions course and is open to FRESHMEN only. You must take PHIL1721 with this course. "What role and significance does work have in flourishing lives and good societies?" This course pair offers Boston College students the opportunity to reflect on the significance and meaning of the human activity of work an activity that is likely to occupy a large portion of their lives. Around the globe, politicians promise "good jobs," and scholars discuss automation and "the future of work." But what is a good job? What form of value is most central to work as a part of a good life—financial reward? social purpose? personal fulfillment? How do individuals and communities understand and achieve justice and meaning at work?

**ENGL172901**

**The Role of Literature in Understanding the Complex Meaning of Justice**

DeRosa, Marla C

Fall 2023
This is an Enduring Questions course and is open to FRESHMEN only. You must take UNAS1719 with this course. What can literature tell us about the complex interactions between individuals and the law? What are the links between values, ethics, religious beliefs, and the law. How do various authors grapple with the complex interplay of these elements? In what ways can literary texts serve as an argument for justice or a polemic against injustice? In this course we will read a range of fiction and nonfiction narratives that examine the meanings of justice and the role of individuals within a legal system. We will work to understand why societies enact laws and whose interests those laws serve. We will also examine the role of lawyers, judges, and litigants and the complex dilemmas they face in both upholding laws and pursuing justice. In the context of the United States, we will specifically examine texts that address the intersection of race, justice, and the legal system. Major Course texts include: Beloved (Toni Morrison), The Nickel Boys (Colson Whitehead), The Merchant of Venice (Shakespeare), To Kill a Mockingbird (Harper Lee), A Civil Action (Jonathan Harr), Just Mercy (Bryan Stevenson). Students will further develop their close reading and analysis skills, but also understand that literature is tied to and influenced by the historical and social contexts in which it is both created and read. This broader understanding of literature will encourage students to consider the cultural work that literary texts can do in the pursuit of justice. Students will further develop their close reading and analysis skills, but also understand that literature is tied to and influenced by the historical and social contexts in which it is both created and read. ENGL173201
Shifting Forms: Sexuality and Belonging in Modern Literature and Film
Ohi, Kevin J
Fall 2023
How does art shape or mediate the formation of (larger and smaller, mainstream and minority) political and social groups? How do the arts help define the public in a Republic? How do aesthetic objects shape minority communities, and their place in a larger social world? Can examining artists use of inherited forms illuminate the political and affective consequences of individuals banding into groups? Tracing representations of citizenship, political participation, and the nation-state since the late 19th century, and, on the other hand, queer film and literature (mainstream and avant-garde) from the same period, we will consider national narratives and national identity in Europe and the United States, and queer art and the formation of minority sexual cultures.

This is a Complex Problems course and is open to Freshman only. The realities of a changing climate, including intensified extreme weather events, rising sea levels, and strengthening heat waves and droughts, are already being felt by frontline communities around the world. This course focuses both on hearing stories about climate change as told by climate writers, scientists, and members of frontline communities, and telling these stories ourselves. We will examine storytelling as it works across mediums and genres from literature to scientific data visualizations, and consider what it means to write an essay, produce a graph, create a podcast, or make a film. Students in the course will read, watch, and analyze examples of climate storytelling, broadly defined, and produce their own personal essays, infographics, podcasts, and/or films. Some questions well foreground throughout the semester are: How do we communicate the science and the human impacts of the climate crisis? Whose ways of knowing and lived experiences do we privilege? How can the stories we tell move society towards just climate solutions?

ENGL173501

The Meaning of Boston: Literature and Culture

Rotella, Carlo

Fall 2023
What does a city--this city in which we find ourselves--mean? Meaning flows through a city just as populations, capital, power, resources, and ideas do, and each of these flows conditions the others. As we consider what Boston has meant in different moments and to different people, we engage follow-on questions: How does the form of a text express meaning? How can we understand the relationship between that text and the historical moment in which it took form, and/or the historical moment it seeks to capture? What happens when we consider the local in relation to national and international events and artistic movements? Our students will develop skills of historical reasoning, will learn how to interpret works of literature and allied arts, and will sharpen their analytical thinking and writing skills within the disciplinary traditions of history and literary/cultural studies. We will encourage them to move beyond the received meanings and standard tropes of Boston--the accent, the city on a hill, the regular-guy mythos retailed by Hollywood--and explore questions that Boston has consistently raised about human beings and nature, race and class difference, the form and function of the good life, the double-edged quality of moral causes, and the contest between the persistence of old ways and the succession of new ones.

ENGL173601
What is Memory, and Why Does it Matter? The Literature of Remembering
Boesky, Amy
Fall 2023
This is an Enduring Question course and is open to FRESHMAN only. You must also register for the accompanying PSYC1701 The Literature of Memory How do literary forms engage with questions of remembering? Can a fictionalized account of the past be more true than a transcription or videotape? What are the ethical obligations for a memoirist who exposes secrets about her family or friends? In the Literature section of this team-taught course, we will read memoir, literary essays, and novels that engage with key issues about memory, including the cultural work of monument-building and the preservation of dignity when memory deteriorates. Texts might include Bechdels Fun Home, Tim O'Briens The Things They Carried, Natasha Tretheways Beyond Katrina, Grace Talusans the Body Papers, and Lisa Genovas Still Alice. Creative assignments may include a graphic narrative, 1-2 personal essays, and a team-built monument. Short analytic exercises will explore the ways that literary forms (graphic narrative, short stories, lyric, memoir, and elegy) work both to challenge and reinforce the ways we remember.

**The World With Us: Environmental Literature in a Time of Crisis**

Yargo, John

Fall 2023
This is an Enduring Question course and is open to FRESHMAN only. You must also register for the accompanying ENVS1702. These courses address the relationship between humans and their environment. Exploring both imaginative and scientific approaches to ecology, we will study how humans have exploited nature, but also how the environment is inextricable from the human experience. Through case studies from ecological literature and conservation science, we will develop skills in identifying environmental degradation, crafting equitable solutions, and expressing ourselves in writing and speech. These courses take a comparative approach to analyzing the history and tradition of diverse narratives of environmental exploitation and conservation through readings from South Asia, Small Island Nations, the Americas, West Africa, and others.

ENGL173704
The World With Us: Environmental Literature in a Time of Crisis
Yargo, John
Fall 2023
This is an Enduring Question course and is open to FRESHMAN only. You must also register for the accompanying ENVS1702. These courses address the relationship between humans and their environment. Exploring both imaginative and scientific approaches to ecology, we will study how humans have exploited nature, but also how the environment is inextricable from the human experience. Through case studies from ecological literature and conservation science, we will develop skills in identifying environmental degradation, crafting equitable solutions, and expressing ourselves in writing and speech. These courses take a comparative approach to analyzing the history and tradition of diverse narratives of environmental exploitation and conservation through readings from South Asia, Small Island Nations, the Americas, West Africa, and others.

**ENGL209701**  
** Intermediate Modern Irish I  
** Nugent, Joseph G  
** Fall 2023  
This is a continuing course in modern Irish for those with a basic knowledge of the language. We emphasize the ability to read contemporary literature in various genres. Texts from a variety of authors and historical periods allow students to taste different writing styles: contemporary fiction, journalism, literary criticism, historical and cultural texts, while we enjoy Irish-language short films and videos.

ENGL212201
Language in Society
Thomas, Margaret
Fall 2023
This course provides an introduction to the study of language in its social context, including varieties of language associated with social class, ethnicity, locale, and age; bilingualism; pidgin and Creole languages; proposals about the relationship of language, thought, and culture; and the structure and role of discourse in different cultures. Sociolinguistic issues of contemporary interest, including language and gender, language planning, and language and public policy will be studied.

ENGL212501
Introduction to Feminisms
Barko, Emily B
Fall 2023
Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

ENGL212701
Language and Language Types
Thomas, Margaret
Fall 2023
Researches the diversity of natural languages and the limits of that diversity. How are human languages similar, and how are they different? What factors control the attested range of cross-linguistic variation? Focus is on morphological and syntactic data, with some discussion of the genetic (historical) relationships among the world's languages and methodological problems facing modern linguistic typologies.

ENGL213101
Studies in Poetry
Najarian, James
Fall 2023
In this class, students will learn to analyze poetry across a wide range of genres, styles, and historical periods. Studies in Poetry will also develop students' critical writing skills, preparing them for upper-division English courses.

**Course Objectives:**
To be introduced to and learn to interpret a variety of poetic forms and techniques
To learn to analyze poems with reference to the social contexts historical, geographic, and otherwise in which they have been composed and transmitted
To continue to hone students abilities in close reading, writing about literature, and oral discussion in the classroom

ENGL214101
American Literary History I
DeRosa, Marla C
Fall 2023
Students need not take these courses in chronological order. Fulfills the pre-1900 requirement. American Literary History 1 follows the development of American literary history from the landing of the Mayflower to the tumultuous decade of the 1850s, moving from such early writers as Bradstreet, Rowlandson and Taylor through such writers of the Revolution and Early Republic as Equiano, Franklin, and Rowson to such antebellum writers as Child, Thoreau, Hawthorne, Poe, Douglass, Whitman, and Melville. Course assignments include regular participation in class discussions, mid-semester and final examinations, and either one ten-page or two five-page essay(s). Students considering careers in secondary English education will be given the option of writing about approaches to teaching course texts.

ENGL217001
**Introduction to British Literature and Culture I**
**Stanton, Robert G**
**Fall 2023**
Fulfills the pre-1700 requirement. Britain, Ireland, and their archipelago were home to an exceptionally vibrant early literary tradition spanning English, French, Irish, Latin, Norse, and other languages. Writing from these islands connected rulers and rebels, merchants and monks, brewers and bureaucrats. This course is a survey of British literature (well question the term) from the beginnings to 1700. Most texts are in English; some are read in translation. The course focuses on connections between literature, power, and the formation of literary canons. The survey covers all major genres of early literature from the archipelago. Texts and authors include Beowulf, Marie de France, Chaucer, Margery Kempe, Spenser, Shakespeare, Milton, and Behn.

ENGL219901
**Introduction to Caribbean Writers**
**DEPT**
**Fall 2023**
The Caribbean, merely viewed through the lens of colonial history, often does not reflect the diversity and complexity of the region. From a colonial perspective, therefore, the Caribbean is both "known" and "unknown." Our work for this course compares and contrasts versions of the region by examining colonial histories and current literary traditions. We will pay particular attention to the ways oppositional cultures and identifies manifest in Caribbean literature. Themes of this course include: colonialism, History/histories, gender, geography ation, sexuality, class, and culture. Varied texts and media will assist in our interpretations of the Caribbean and its diaspora.

ENGL220801  
**Explore the Irish: An Introduction to Irish Studies**  
**Nugent, Joseph G**  
**Fall 2023**  
How can a tiny island and its diaspora have so shaped the literature, film, music, art, science, and politics of the world? From charming backwater to center of technology, from bastion of Catholicism to gay marriage, through peace and conflict, Irishness (and Irish-Americaness) is an ever-unstable proposition. Exploring through categories such as gender, sexuality, and ethnicity its manifold mutations, this course will investigate the troubled stream of Irish history and culture from Jonathan Swift to Stephen Colbert, from W.B. Yeats to Riverdance, from JFK to U2, from Celtic Christianity to Celtic Tiger.

ENGL221201
Introduction to Medical Humanities
Boesky, Amy
Fall 2023
This course will use contemporary literature as a springboard to consider the psychological, social, ethical, and experiential dimensions of sickness and health. In addition to exploring questions of illness and the body, we will address topics including disability, aging, pregnancy, pain, medical space, illness and culture, and care giving. Through the analysis of novels, poems, short stories and non-fiction, we will consider the way that bodily experiences, material conditions, and cultural constructions of normalcy shape our understanding of identity in sickness and in health.

**ENGL222001**  
**Classical Mythology**  
**Eisenfeld, Hanne E**  
**Fall 2023**  
This course explores the mythology of ancient Greece, Rome, and the Near East within its cultural, political, historical, and religious contexts. You will meet (or renew your acquaintance with) mythical figures like Zeus, Gilgamesh, Medusa, and Helen as they appear in multiple literary genres and other artistic media. In order to analyze and interrogate these myths we will use ancient and modern frameworks for thinking about what mythology is and what it does. What can a myth tell us about the civilization that created, adopted, or adapted it? What do our uses of Classical mythology--and our creations of our own myths--tell us about ourselves?

ENGL223701
Studies in Children's Literature: Disney and the Wondertale
Rudner, Bonnie
Fall 2023
Disney films have remained outside the critical landscape because they have been considered either beneath artistic attention or beyond reproach. The goal of this course will be to explore the issues presented in such Disney films as The Lion King, Aladdin, Prince of Egypt, and Pocahontas. To do this, we will read source material (The Arabian Nights, Hamlet, tales about Pocahontas, Bible stories about Moses, Exodus, etc.) and secondary studies.

ENGL224101
Playwriting I
Cummings, Scott T
Fall 2023
This writing-intensive course offers a practical introduction to the art and craft of writing for performance. Students will engage in numerous writing exercises that highlight the special demands and opportunities of writing for the stage. Emphasis is placed on finding ways to contact and release the theatrical imagination and on mastering the basics of writing a solid dramatic scene. Exemplary plays by established playwrights will be studied as appropriate, but the overwhelming emphasis is on student writing.

ENGL227801
American Culture: Engaging Difference and Justice
Harrison-Kahan, Lori
Fall 2023
This course offers an introduction to the interdisciplinary study of American culture with an emphasis on questions of difference, justice, and power. We will concentrate on approaches, methods, and themes of interest as we assemble critical skills for making interpretive arguments about aspects of culture in their historical moment. While assembling a toolkit of interpretive moves we can make on American culture and working to build stronger analyses, we will also consider how American society and culture have been defined by differences of race, class, gender, sexuality, dis/ability, religion, and other socio-cultural categories. We will consider how American Studies scholars have combined theory and praxis in order to expose injustice in the nations past and present; form communities based on principles of inclusion and solidarity; and create just conditions for citizenship and humanity. The materials we analyze will include examples from film, television, music, literature, theater, comics, photography, advertising, among others. Each unit will be organized around a question that generates further questions, analysis, and discussion. The questions include, for instance, Why is Indigenous Studies central to American Studies?, What does visual culture tell us about race in modern America?, and How do we see race and religion after 9/11? During the semester, we will also attend a number of events sponsored by American Studies, AADS, and other interdisciplinary departments, centers, and programs that represent a variety of interests, subjects, and approaches. This course satisfies the university Cultural Diversity requirement. For English majors this course also satisfies the Literature Across Worlds requirement. Note for American Studies Minors: Students can take either ENGL2278 or ENGL 2277: Introduction to American Studies to satisfy the introductory course requirement. (Students cannot receive credit for both courses.)

ENGL301101
The Art of Tutoring Writing
Anderson, Lynne C
ENGL301901
Murder She Wrote
Roberts, Susan A
Fall 2023
In this one-credit seminar we will read five novels by twentieth and twenty-first century women writers that suggest the mystery genre has much to offer in the way of literary analysis and enjoyment. Authors will include: Dorothy L. Sayers, Ngaio Marsh, Barbara Neely, Maj Sjowall, and Louise Penny. We will consider violence as a literary theme, gender norms in the genre (and their subversions), geography and journey as a central aspect of the works, as well as the allusive elements of myth and legend undergirding their structure.

ENGL302001
From Sappho to Stonewall: Landmarks of Gay History
Mormando, Franco A
Fall 2023
An introductory survey of some of the most important moments, figures, debates, and texts in the history of same-sex desire and behavior in the West (Europe and the USA). The course will span the centuries from classical antiquity all the way to, and including, the watershed event of the NYC Stonewall Uprising of 1969, often seen as marking the effective launch of the modern gay rights movement. We will chart the ever-evolving understanding of same-sex desire and behavior on the part of both legal, medical, and religious authorities as well as the private individuals living that reality. Also examined will be the justifications given by church and state for the persecution of gay people over the centuries, as well as the attempts by gay people to fight against that persecution. Our evidence will embrace a wide variety of primary sources, both textual and visual (film and art).

Fulfills the pre-1700 requirement. An introductory lecture/discussion course, placing Shakespeare's drama in the historical and theatrical contexts of his time. Topics will include Shakespeare's professional career; the playhouses for which he wrote; the structure of Elizabethan playing companies; Elizabethan stage conventions such as blank verse, doubling, and cross-dressing; and the textual and performance histories of his plays. Plays will likely include *A Midsummer Night's Dream, Hamlet, As You Like It, Othello, Measure For Measure*, and *The Tempest*.

**ENGL333101**  
**Victorian Inequality**  
**Hunt, Aeron P**  
**Fall 2023**  
Fulfills the pre-1900 requirement. From "Dickensian" workhouses to shady financiers, Victorian literature has provided touchstones for discussions of inequality today. This course will investigate how writers responded to the experience of inequality in Victorian Britain during an era of revolution and reaction, industrialization and urbanization, and empire building. Considering multiple axes of inequality, we will explore topics such as poverty and class conflict, social mobility, urbanization, gender, education, Empire, and labor. We will read novels, poetry, and nonfiction prose; authors include Alfred, Lord Tennyson; Elizabeth Gaskell; Charles Dickens; Elizabeth Barrett Browning; Mary Prince; Arthur Morrison; and Thomas Hardy.

ENGL33301
British Modernism
Lehman, Robert S
Fall 2023
In this course, we will study the great works of modernism with an eye toward the ways in which this revolution in the arts became our own tradition. Though we will focus on British modernism in particular, the global character of modernism will necessitate some attention to American and Continental European influences. We will also have the opportunity to compare literary modernism to developments in architecture, film, and painting. Authors to be discussed include Samuel Beckett, Joseph Conrad, H.D., T. S. Eliot, James Joyce, Wyndham Lewis, Ezra Pound, Rebecca West, and Virginia Woolf.

ENGL334001
Asian American Literature: Immigration, Exclusion and Engagement
Puente, Lorenzo A
Fall 2023
In this course, we will study fiction and non-fiction texts by Asian American writers exploring the Asian American experience of immigration, exclusion, and engagement. The course will focus on texts that deal with Asian American experience and reflection on inter-ethnic alliance, social justice and activism. Asian American writers we will study include, among others, Sui Sin Far, Maxine Hong Kingston, Carlos Bulosan, Viet Thanh Nguyen. The course will include a module on Asian American community-based initiatives on the issue of Boston's Chinatown and gentrification. This course fulfills the core Cultural Diversity (Engaging Diversity and Justice) requirement. For English Majors, this course satisfies the Race, Blackness, and Language requirement.

ENGL335701
American Bestsellers and Undersellers
Franzino, Jean L
Fall 2023
Focusing on the long nineteenth century, we will consider formative American texts that were wildly popular in their time, as well as others that were overlooked for a variety of historical, social, and aesthetic reasons. We will ask what cultural factors contributed to a book's popularity, enduring appeal, or dismissal. We will further explore how these texts confirmed or challenged dominant ideologies, and how reading them now can allow us to reflect on the desires, fears, and struggles of our own historical moment. Possible texts include: Hannah Webster Foster’s The Coquette, Benjamin Franklin’s Autobiography, Lydia Maria Child’s Hobomok, Frederick Douglass’s Narrative of the Life of Frederick Douglass, Harriet Jacobs’s Incidents in the Life of a Slave Girl, Harriet Wilson’s Our Nig, Herman Melville’s Moby Dick; Harriet Beecher Stowe’s Uncle Tom’s Cabin, Mark Twain’s Adventures of Huckleberry Finn, and Upton Sinclair’s The Jungle.

ENGL335801  
The Great Acceleration: Contemporary Fiction and Climate Change  
Gray, Kelly  
Fall 2023
How do we tell stories about a crisis that is becoming ever more ordinary? This course explores how writers and filmmakers have addressed the Great Acceleration: a sharp, post-1945 turn within the Anthropocene—the proposed geological epoch defined by human impact upon the earth—witnessing exponential growth in human populations, economies, and resource consumption that has pushed earth systems into dangerous unsustainability. Together we will analyze fictions that take up urgent questions of this moment, for instance how nature is conceptualized differently over time, how capitalism becomes naturalized through the working of the land, and how we understand the paradox of natural disasters as a term. Works may include novels such as Carlos Bulosan’s America is in the Heart (1946), Thomas Pynchon’s The Crying of Lot 49 (1966), Octavia Butler’s The Parable of the Sower (1993), and Tommy Orange’s There There (2018), and films such as Chinatown (1974), The Day After Tomorrow (2004), and Sorry to Bother You (2018).

**ENGL336101**  
**Race in American Horror**  
**Haley, Kenneth**  
**Fall 2023**
This class will look at the depictions of race within the horror genre. We will read and discuss a combination of older and newer works to better understand how the depictions of race have changed throughout the years. Some of the questions we will consider include how marginalized groups are/were depicted in horror? How do authors from those marginalized groups use the genre to respond to their marginalization? What issues do authors from marginalized groups address in their work? Throughout the semester we will look at works from various authors including Zora Neale Hurston, H.P. Lovecraft, Victor LaValle, Stephen Graham Jones, and more.

**ENGL336201**  
**Crafting Activism: Democracy, Composition, and D.I.Y. Rhetorics**  
**Ingram, Noel E**  
**Fall 2023**  
Since ancient Greece, rhetoric, the "art of persuasion," has been concerned with making. Discussions of techne, a Greek word that loosely translates to "craft," are prominent in the works of Aristotle, Plato, and others. This course engages with the history, theory, and production of DIY (Do It Yourself), multimodal, and craft rhetorics as a way to better understand public rhetorical actions connected to social activist movements, including feminist, environmentalist, anti-capitalist, anti-war, and anti-racist movements. Students will learn to define and practice composition as a process and practice that involves more than the production of static words on a page. This project-based course requires students to closely examine the rhetorical significance of various writing tools, materials, and techniques and gain hands-on practice with multiple compositional materials, from paper to fabric, pencil to pixels.

ENGL352701
General Linguistics
Owusu, Augustina
Fall 2023
An introduction to linguisticsthe scientific study of human languages and contemporary linguistic theory. Linguists use mathematical systems (often called formal systems) to develop precise theories that help us understand the rich cognitive processes that support our use of language to communicate, to conduct internal monologues, and much more. The course focuses on the major subfields within linguistics: phonetics, phonology, morphology, syntax, and semantics: how do linguists create and manipulate representations of language phenomena, and how do they analyze linguistic data? Our primary data will be from English, but we will also employ data from other languages. No previous exposure to the field is presupposed.

ENGL420101
Science Writing
Sutton, Sarah C
Fall 2023
From driverless cars to gene therapy to cryptocurrency, the latest scientific and technological breakthroughs promise to transform life as we know it. When science moves from the laboratory, to corporate boardrooms, to news headlines, and into our daily lives, writing is involved in every step along the way. In this course, we will read works created by and about scientists, and explore how science circulates through society via social media and blog posts, traditional media, and government policy making. We'll also examine how companies communicate with the public via press releases, the media, and advertisements. In written and oral assignments, students will practice the skills essential for success in writing about science--researching and reporting, interviewing scientists, pitching new ideas, understanding audience expectations, and clearly communicating essential knowledge. Students will have multiple opportunities to conceive, draft, revise, and complete writing projects tailored to diverse audiences. This course aims to help students understand and explore science writing as a career--including opportunities in media, research labs, university news offices, museums, science and technology focused companies, and many other venues.

**ENGL438001**  
**True Fiction: From Philosophy to Literature**  
**Newmark, Kevin**  
**Fall 2023**  
Beginning with Plato's allegory of the cave, this course will examine the question of truth and the way it has been addressed in several key texts, at several key moments, in the history of philosophy and of literature. What is the relation between the philosophical concept of truth and the literary modes of fiction in which that concept is often articulated? Readings will include Plato, Descartes, Kant, Kleist, Kierkegaard, Nietzsche, Kafka and Heidegger, among others.

ENGL455001
Topics in Creative Nonfiction: Writing for Magazines
Rotella, Carlo
Fall 2023
In this advanced creative nonfiction writing course we practice and study the craft of magazine writing. We will write and read a variety of articles, features, profiles, reviews, columns, essays, etc. and work on professional skills, such as pitching a story and interviewing. We will also consider models provided by accomplished journalists, by reading their work and by having them in for class visits. A variety of writing assignments, workshopping of student prose, and discussion of assigned reading are regular features of the course's workload. Admission to this course is by permission of instructor on the basis of manuscript submission. Please submit up to 8 double-spaced pages of writing, which can be an entire piece, part of a longer piece, or a compilation of shorter ones. You can explain the nature of what you have submitted in an accompanying note, and please also list any writing workshops you have already taken. Be sure to include your name and email address. Materials should be submitted to Carlo Rotella via email (rotellca@bc.edu) before the date on which registration for the next semester begins. Students will be promptly notified by email as to whether they have been admitted to the course. Materials submitted after the first day of registration will still be considered if there are any open seats remaining.

ENGL457701
Writing Workshop: Poetry
Adair, Allison C
The course will provide an introduction to poetry writing as a discipline and craft by encouraging students to practice writing in a variety of modes. Students' own poems, from both open and directed writing assignments, will become the main text for this workshop, in addition to some models provided by the instructor for discussion of prosody and technique. The workshop critiques will focus on strategies for revising early drafts, and a chapbook of finished poems will be due from each student at the end of the semester. No application process.

ENGL457901
Writing Workshop: Fiction
Matson, Suzanne M
Fall 2023
Enrollment limited to 15. This course provides encouragement, practice, and criticism for students seriously interested in writing short fiction. The workshop format demands self-motivation and universal participation. Since students' stories are texts for class discussion, a generous willingness to respond to others' writing and to expose one's own work to such reactions is an essential prerequisite. Individual conferences with the instructor supplement the workshop discussions. Students are expected to produce a steady stream of new and revised fiction throughout the semester. Narrative preferences from the traditional to the experimental are welcome.

ENGL466101
American Studies Honors Thesis
Klein, Christina
Fall 2023
ENGL502801
Seminar: Dickens
Ohi, Kevin J
Fall 2023
Seminar & pre-1900. A seminar on the works of Charles Dickens. The sustained attention to a range of his novels will illuminate some of his specific contributions to the novel in English, as well as development over the course of his career. We will consider character (the rendering of psychology and his charismatic caricatures), narrative voice, plot structure, and setting, as well as the particular vision of social networks and sociality, with the pressures these exert on ethics and desire, and on personhood. We may read some short works and some important critical works, but our main focus will be on the novels.

ENGL552201
Capstone: Creativity and Self
Roberts, Susan A
Fall 2023
Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Creativity is the act of bringing that which does not exist into existence, of bringing forward that which has previously never lived. It is the remarkable experience of bringing something out of nothing. In order to bring something new into the world, you must be willing to go into the unknown. Just as the poet might listen inwardly and stay open for the next word and just as the artist might pay attention to the images that arise from within, creativity asks that we have one foot in what is known, or existence, and one foot in what is not-known, or non-existence. This requires an ability to be still, to look both inward and outward, and then to record the resulting art-making or in life. In this Capstone course, students will attend to two areas: the meaning of art and mindfulness, and their own history of making (or lack thereof) and how they would like to build artistic sensibility, creativity and creation into their lives. We will investigate the spiritual roots of creativity, and the ways in which creativity and appreciation of art and art-making can contribute meaningfully to the development of one as a full citizen of the world. You do not have to have any experience in art-making to take this course. Texts include: Creativity: Where the Divine and Human Meet, by Matthew Fox and Art and Fear: Observations on the Perils (and Rewards) of Artmaking, by David Bayles and Ted Orland, Start Where You Are: A Journal for Self-Exploration, by Meera Lee Patel (you should write in this every week; you'll be presenting it in your "exit interview" at semester's end)

ENGL630101
Seminar: Nineteenth-Century African American Literature and Culture
Curseen, Allison S
Fall 2023
Seminar: Nineteenth-Century African American Literature and Culture This course will examine literary, art, performance, and other cultural texts from the long nineteenth century produced by, alongside, about, and/or significant to African American life and culture. The class will be organized around a critical topic which Black Studies, American Studies, and/or literary studies scholars have identified as significant to the discourse on this history and body of texts. In our examination of this topic we will engage a myriad of texts by diverse authors across different mediums and genres; explore a variety of nineteenth century US archives; and constantly interrogate the relationship between history and black literary and artistic production.

ENGL630201
Seminar: Black Feminist Literature, Art, and Performance, 1970s-1990s
Jones, Jovonna
Fall 2023
Seminar: Black Feminist Literature, Art, and Performance, 1970s-1990s In this course, we will explore Black feminism and its emergence as a cultural field from the 1970s through the 90s. Black feminism began in the 1970s as a movement that centered the lived experiences, political visions, and intellectual ideas of Black women who didn’t see themselves as fully accounted for in mainstream civil rights and women's rights movements. The Black feminist movement birthed a generation of writers and artists who foregrounded Black women’s stories and audiences paid attention to their voices like never before. Authors and artists in this course may include The Combahee River Collective, Ntozake Shange, bell hooks, Toni Morrison, Faith Ringgold, Michele Wallace, Audre Lorde, Alice Walker, Kathleen Collins, Howardena Pindell, Julie Dash, Joan Morgan, and more. For English majors, the course satisfies the Seminar requirement and the Race, Blackness, and Language requirement.

Holocaust Literature: History, Memory, Legacy
Shrayer, Maxim
Fall 2023
An overview of the history and legacy of the Shoah (Holocaust) followed by an examination of the variety of literary responses by literary witnesses and survivors, as well as by writers removed from the wartime horrors by distance, time, country, and language. Questions of metaphysics, ideology, ethics, aesthetics, memory, and cultural theory as formulated and debated in poetry, fiction, nonfiction, and discursive writings. The readings include works originally written in Russian, Yiddish, Polish, German, Italian, French, and English by Ilya Selvinsky, Vasily Grossman, Ilya Ehrenburg, Avrom Sutzkever, Tadeusz Borowski, Paul Celan, Primo Levi, Theodor Adorno, Elie Wiesel, Vladimir Nabokov, Hannah Arendt, Arthur Miller, W. G. Sebald and others. All the required readings will be in English translation.

ENGL664901
Seminar: Irish Romanticism
Connolly, Claire A
Fall 2023
Irish literature written in English in the late eighteenth and early nineteenth century registers and responds to a still palpable history of unjust colonial land settlements, revolution and war, a rural society in transition, famine and displacement. This course tracks the work of key Irish writers (Lady Morgan, Maria Edgeworth, Thomas Moore, Gerald Griffin and James Clarence Mangan) who together developed a distinctively textured aesthetic that draws on the past in order to shape new literary futures. Topics to include population, political economy, gender, memory, landscape and empire.

ENGL702901
Literature and the Political
Seshadri, Kalpana R
Fall 2023
Satisfies the theory requirement for graduate students. What is the difference between Politics and The Political? What does political ontology mean, and how does it condition our interpretation of a literary text? How are the political and the ethical differentiated and related? What is the role of responsibility in ethics and politics? In this course we shall sample a variety of approaches to the political as developed by philosophers and activists to develop a reading protocol for identifying and interpreting the literary text. While concepts such as political contingency, sovereignty, normativity, and universality are crucial for grappling with the diverse manifestations of the political, the question of what constitutes the literary element in a given textual situation in contradistinction to literature and its politics of representation will serve as a focal point for our discussions. Theorists will include Carl Schmitt, Hannah Arendt, Heidegger, John Rawls, Judith Butler, Bernard Williams, Foucault, Derrida, Gayatri Spivak and Nancy Fraser.

Credits: 3
Room and Schedule: Stokes Hall 207S Tu 04:30PM-06:55PM

ENGL703001
Psychoanalytic Theory
Restuccia, Frances
Fall 2023
This course satisfies the theory requirement for graduate students. A course on psychoanalytic theory, featuring works by Freud, Lacan, Kristeva, Zizek, Dolar, and possibly Abraham and Torok, Deleuze, and Han. We will focus on concepts such as melancholia & abjection, masochism, fetishism, castration/lack, the drive (in particular, the death drive), the gaze, transference, love/desire, sublimation, the Symbolic/Imaginary/Real triad, and jouissance as well as the clinical categories of obsessional neurosis, hysteria, perversion, psychosis. We will read material on these thinkers, such as Fink's A Clinical Introduction to Lacanian Psychoanalysis, Restuccia's Amorous Acts and The Blue Box (on contemporary film), Zupancic's What is Sex? as well as her newest book on Antigone, and possibly essays by Copjec. Especially through Zizek's Sexuality and the Failed Absolute, we will tie psychoanalysis to philosophy. Two papers will be required.

Matthew Arnold famously wrote "Art is a criticism of life." Naguib Mahfouz has taken this a step further: "Art is a criticism of society and life, and I believe that if life became perfect, art would be meaningless and cease to exist." Nineteenth-Century Poetry, Prose, and Cultural Criticism will explore connections among three different modes of Victorian writing: poetry, cultural criticism, and life writing. Authors we will read include Elizabeth Barrett Browning, John Keble, Thomas Carlyle, Alfred Tennyson, Christina Rossetti, Gerard Manley Hopkins, Matthew Arnold, Annie Besant, Margaret Oliphant, Harriet Martineau, John Ruskin, Florence Nightingale, Matthew Arnold, Frederic Harrison, and Leslie Stephen, among others. It will try to examine the buried positions and controversies in these works. Most important, it will try to examine the struggles of these works in the marketplace, and within the vivid milieux of Victorian intellectual and literary life, taking into account their reception and dissemination; their influence of lack of it, and their nascent afterlives.

ENGL770001
English Language Training for Graduate Level Students: Focus on Speech and Presentation Skills
Anderson, Lynne C
Fall 2023
Designed for students whose first language is not English, this course will emphasize the oral/aural language skills required for success in graduate work. It will provide students the opportunity to hone their speaking and listening skills through group discussions, presentations, and targeted practice in pronunciation, stress, and intonation through the reading of poetry and tongue twisters. The course may be particularly beneficial to those with teaching responsibilities at BC. Non-credit and offered free of charge by GSAS to its students during the fall semester. Students who enroll in the course are expected to attend all classes throughout the semester. The course is restricted to students in the Morrissey Graduate School of Arts and Sciences. If space permits, students from other schools will be considered. Admission to the course is by application and permission of the instructor.

**Fall 2023**

Foundational course for the use of digital scholarship in the humanities. By the end of the course, students will have a grounding in what digital scholarship is as well as an arsenal of techniques for utilizing DS in their own work.

**Credits:** 3

**Room and Schedule:** Stokes Hall 376S Tu 02:00PM-04:25PM

**Satisfies Core Requirement:** None

**Prerequisites:** None

**Corequisites:** None

**Cross-listed with:** HIST7888

**Frequency:** Periodically

**Student Level:** Graduate
ENGL880201
Joyce's *Ulysses*
Howes, Marjorie E
Fall 2023
This course will be dedicated to an extended exploration of James Joyce's *Ulysses*, a novel that has often been called the most important literary work of the twentieth century. Most of our time will be devoted to an intensive reading of the novel itself, but we will also read selected critical and historical materials. No prior knowledge of Joyce's works is required, just a willingness to tackle the challenges offered by his most influential masterpiece.

---

ENGL888701
Introduction to Advanced Research
Stanton, Robert G
Fall 2023

---
This course will acquaint you with the resources to carry out the central tasks of literary scholarship. Bibliography (studying the production, dissemination, collection, location, and identification of literary artifacts and versions) forms the dynamic basis for scholarship and criticism of all kinds, just as critical sensibility guides our choice of what to look for. You will be guided through the reference works and databases in the Boston College library and elsewhere, discuss the goals, purposes, and future of the field of literary studies, explore the phenomenon of digital humanities, and produce an original project based on archival sources.

ENGL991201
Crane, Mary T
Fall 2023
Sixteenth and early Seventeenth-Century England saw enormous changes in understanding what knowledge was and how it could be attained. These changes shaped the construction of modern attitudes toward the environment, race, gender, religion, and politics—toward our sense of what human beings are and what their role in nature should be. In this seminar we will read primary texts that reflect and participate in these changes, and secondary works that bring different methods and approaches to understanding them. Readings will include works by More, Shakespeare, Donne, Bacon, Cavendish, and others. There will be space for students to pursue research projects relevant to their own fields and interests.

ENGL101001
First Year Writing Seminar
Hackworth, Jared Matthew
Spring 2024
Limited to 15 students. Designed as a workshop in which each student develops a portfolio of personal and academic writing, the seminar follows a semester-long process. Students write and rewrite essays continuously, discuss their works-in-progress in class, and receive feedback during individual and small group conferences with the instructor. Students read a wide range of texts, including various forms of non-fiction prose. In addition to regular conferences, the class meets two hours per week to discuss the writing process, the relationship between reading and writing, conventional and innovative ways of doing research, and evolving drafts of class members.

ENGL107901  
Literature Core for Multilingual Students  
Wilwerding, Lauren  
Spring 2024

This course, the second half of a year-long sequence of core English courses, is designed for students whose first language is something other than English. It may be taken in place of ENGL 1080: Literature Core and satisfies the literature core requirement. Students will have ample opportunity to participate in group discussions as they explore a variety of literary genres from short fiction to poetry to drama, with a focus on American literature. Support for language issues including those related to writing is an important component of the course. Seats are prioritized for students who have been recommended for targeted language support. Students place into this course based on BC’s English Writing Assessment taken during the summer prior to freshman year or in consultation with the director of the program, lynne.anderson@bc.edu

Credits: 3  
Room and Schedule: Stokes Hall 121N MWF 10:00AM-10:50AM  
Satisfies Core Requirement: Literature  
Prerequisites: Permission of Department

ENGL108001
Literature Core
Lehman, Robert S
Spring 2024
In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: www.bc.edu/literaturecore

In Literature Core, students explore the principal motives which prompt people to read literature: to assemble and assess the shape and values of one's own culture, to discover alternative ways of looking at the world, to gain insight into issues of permanent human importance as well as issues of contemporary urgency, and to enjoy the linguistic and formal satisfactions of literary art. Literature Core will strive to develop the student's capacity to read and write with clarity and engagement, to allow for that dialogue between the past and present we call history, and to provide an introduction to literary genres. For course descriptions of the individual sections please see: www.bc.edu/literaturecore

**ENGL109401**  
**An Introduction to Modern Irish II**  
**Cahill, Sean R**  
**Spring 2024**  
Following on from ENGL1093, this course offers a continuing introduction to the Irish language for American students. This semester we will learn the past, future and imperative tenses. We will examine the history of English and British policy toward the language, up to the controversy over the Irish Language Act today. We will continue to learn songs, and examine simple poetry and drama in Irish. Through this exploration you will enlarge your understanding of the cultural heritage out of which the language emerged, and which is accessible through Irish Gaeilc. Completion of this and Continuing Modern Irish I and II will fulfill the Morrissey College of Arts and Sciences language proficiency requirement.

ENGL171501
Revolutionary Media: How Reading Changes Us
Crane, Mary T
Spring 2024
This is an Enduring Question course and is open to FRESHMEN only. You must take HIST1705 with this course. As digital media have become more prevalent, studies have shown that they have changed the way we read and that various modes of reading shape our thinking, our feelings, and even our brains in varying ways. We read textbooks differently than we read poems, tweets differently than we read novels. This course centers on the cognitive and social contexts of reading. We will read a range of texts in different media, from 1450 to the present, that deal in some way with the nature of reading itself, including pamphlets, poems, novels, a graphic novel, film, and social media. We will also work on developing strategies for effective reading and writing.

ENGL171801
Reading In/Justice: Literature as Activism from Abolitionism to #BlackLivesMatter
Harrison-Kahan, Lori
Spring 2024
This is an Enduring Question course and is open to FRESHMEN only. You must take ENGL1719 with this course. This course examines how literature addresses questions of racial, gender, and economic injustice. Topics include slavery, abolition, and civil rights; feminism and gender equality; labor reform; and global human rights. Readings range from poetry, drama, and fiction to journalism, memoir, and new media. Questions will include: Why are some works created for activist purposes considered art while others are not? How do literary works transcend the writers intentions to take on new meaning in the public sphere? How has the recovery of forgotten works by women and minority writers become an act of socio-political activism?

ENGL171901
Writing In/Justice: The Power of Response
Puente, Lorenzo A
Spring 2024
This is an Enduring Question course and is open to FRESHMEN only. You must take ENGL1718 with this course. In this writing workshop students will question, analyze, and respond to injustice through writing. By responding to readings, to the times we live in, and to their own long-burning questions regarding justice and injustice and the gap between, students will grow as college writers and thinkers. Education, discrimination in its many forms, economic inequality, and other topics determined by student interest will be examined. Texts will include Spiegelman's graphic novel MAUS, Freires Pedagogy of the Oppressed, and Coates open letter to his son, Between the World and Me. Projects include letters, editorials, personal narratives, interviews, philosophical ponderings, and a multi-genre research project.

**Introduction to Feminisms**

**Barko, Emily B**

**Spring 2024**

Fulfills Women Writer's requirement for ENGL/LSOE majors. This introductory course offers both an overview and a foundation for understanding the various movements that make up what has come to be called the feminist movement in the U.S. Because systems of privilege and disadvantage shape women's and men's identities and social positions in multiple and unique ways, Introduction to Feminisms analyzes gender from an interdisciplinary approach and applies numerous academic disciplinary methods to the study of gender, including history, literature, psychology, and sociology, and explores women's and men's experiences within various cultural contexts, including socioeconomic class, race and ethnicity, religion and spirituality, nations of citizenship, origin, and generation.

ENGL213101
Studies in Poetry
Howes, Marjorie E
Spring 2024
In this class, students will learn to analyze poetry across a wide range of genres, styles, and historical periods. Studies in Poetry will also develop students' critical writing skills, preparing them for upper-division English courses.

**Course Objectives:**
- To be introduced to and learn to interpret a variety of poetic forms and techniques
- To learn to analyze poems with reference to the social contexts historical, geographic, and otherwise in which they have been composed and transmitted
- To continue to hone students' abilities in close reading, writing about literature, and oral discussion in the classroom

ENGL214201
American Literary History II
Puente, Lorenzo A
Spring 2024
Fulfills pre-1900 requirement.. The decades following the Civil War were a time of fundamental change in U.S. society: the demise of the slave system and the rise of segregation; the emergence of industrialism, corporate culture, imperial adventurism, and successive waves of immigration; new roles for women; new patterns in cities and in regional byways; and new ideas imagined for reordering and reinventing democratic society all transformed the contours of daily life. This course examines how a diverse range of U.S. writers sought to capture and address these developments with new literary forms and practices, including the realist and naturalist novels to utopian literature and various forms of social commentary. Stretching, roughly, from 1865 to 1914, course readings will likely include works by Herman Melville, Mark Twain, W. E. B. Du Bois, Booker T. Washington, Rebecca Harding Davis, William Dean Howells, Charlotte Perkins Gilman, and Henry James.

Credits: 3

ENGL217101
Introduction to British Literature and Culture II
Najarian, James
Spring 2024
Fulfills the pre-1900 requirement. This lecture course explores great British writers from 1700 to the present. This period includes (among much else) the great essayists and satirists of the eighteenth century, the Romantic poets and Victorian novelists of the nineteenth, the modernists of the twentieth, and the world writing that follows the break-up of the British empire. We consider these works in light of the cultural context in which they were written.

ENGL221201
Introduction to Medical Humanities
Dunsford, Clare M
Spring 2024
This course will use contemporary literature as a springboard to consider the psychological, social, ethical, and experiential dimensions of sickness and health. In addition to exploring questions of illness and the body, we will address topics including disability, aging, pregnancy, pain, medical space, illness and culture, and care giving. Through the analysis of novels, poems, short stories and non-fiction, we will consider the way that bodily experiences, material conditions, and cultural constructions of normalcy shape our understanding of identity in sickness and in health.

**ENGL222201**

**Introduction to Creative Writing for Multilingual Students**

Anderson, Lynne C

Spring 2024
Are you a speaker of another language (or languages) in addition to English? Have you always wanted to write creatively but never had the time? In this beginning-level creative writing workshop, participants will embark on their own personal, artistic journeys and gain confidence as writers of English. You will consider the languages, family rituals, and stories that have shaped you by writing deeply personal essays and spoken-word poems that explore your identity as a writer and storyteller. You will write weekly, both in and out of class, and learn to listen carefully to your peers and the stories they have to share. We will discuss your classmates drafts throughout the semester and you will learn to provide thoughtful feedback to help one another build confidence and find joy in writing. In addition to reading the work of students in our workshop, we will read texts by multicultural storytellers including Sandra Cisneros, Jhumpa Lahiri, and Chang Rae Lee and explore the way language and cultural rituals shape identity. We will encourage one another to write boldly and freely and be creative with form, looking to spoken word poets, such as G Yamazawa who writes from the lens of the cultural outsider, for inspiration. We will experiment with language mixing, code-switching, play with sentence structure, and learn to abandon the rules of English grammar in early drafts in order to free ourselves to explore our personal stories more deeply. All levels of writers are encouraged to register.

ENGL222801  
*Twentieth-Century Russian Literature (in Translation)*  
Shrayer, Maxim  
Spring 2024
Satisfies the literature core requirement and the cultural diversity requirement. Landmarks of Russian-language literature from the Russian Empire, the USSR, and the emigrations, in the context of the twentieth century's turbulent history. Works by Akhmatova, Brodsky, Bunin, Gladkov, Mayakovsky, Selvinsky, Shkovsky, Sologub, Solzhenitsyn, Trifonov and others. Conducted entirely in English. All readings are in English. Students of Russian contribute their expertise. No prerequisites.

ENGL224801  
**Playwriting II**  
Cummings, Scott T  
**Spring 2024**  
Attendance at local productions of new plays is expected. This laboratory course continues the work begun in Playwriting I on an advanced level and a more independent basis. In addition to in-class writing and take-home assignments, students will write a fully developed full-length play or two complete one-acts. The course places particular emphasis on the completion of lively, well-structured, rehearsal-ready scripts, and in that interest, a major revision of a work-in-progress is important.

**Credits:** 3  
**Room and Schedule:** TuTh 03:00PM-04:15PM; Vanderslice  
**Satisfies Core Requirement:** None

ENGL227801
American Culture: Engaging Difference and Justice
Harrison-Kahan, Lori
Spring 2024
This course offers an introduction to the interdisciplinary study of American culture with an emphasis on questions of difference, justice, and power. We will concentrate on approaches, methods, and themes of interest as we assemble critical skills for making interpretive arguments about aspects of culture in their historical moment. While assembling a toolkit of interpretive moves we can make on American culture and working to build stronger analyses, we will also consider how American society and culture have been defined by differences of race, class, gender, sexuality, dis/ability, religion, and other socio-cultural categories. We will consider how American Studies scholars have combined theory and praxis in order to expose injustice in the nations past and present; form communities based on principles of inclusion and solidarity; and create just conditions for citizenship and humanity. The materials we analyze will include examples from film, television, music, literature, theater, comics, photography, advertising, among others. Each unit will be organized around a question that generates further questions, analysis, and discussion. The questions include, for instance, Why is Indigenous Studies central to American Studies?, What does visual culture tell us about race in modern America?, and How do we see race and religion after 9/11? During the semester, we will also attend a number of events sponsored by American Studies, AADS, and other interdisciplinary departments, centers, and programs that represent a variety of interests, subjects, and approaches. This course satisfies the university Cultural Diversity requirement. For English majors this course also satisfies the Literature Across Worlds requirement. Note for American Studies Minors: Students can take either ENGL2278 or or ENGL 2277: Introduction to American Studies to satisfy the introductory course requirement. (Students cannot receive credit for both courses.)

ENGL228201
Knights, Castles, and Dragons
Resler, Michael
Spring 2024
Conducted in English with all texts in translation. Counts toward German major, German minor, and interdisciplinary German Studies minor. A study of the masterpieces of the first great blossoming in German literature including the Nibelungenlied, Tristan, and Hartmann von Aue's Erec. Central to the works of this age are (1) the rise of knighthood and (2) the spreading to Germany of the legend of King Arthur and the knights of the Round Table. In addition, older Germanic-heroic influences will be examined in certain of the works. The literature will be discussed in the larger context of its sociological and historical background. The literary traditions of France will be systematically linked to contemporary developments in Germany.

ENGL234801
Modern Middle Eastern and Arabic Literature (in translation)
Mouhib, Abdelkrim
Spring 2024
All works are read in English translation. The complex, multicultural nature of the Middle East is explored by surveying the twentieth-century literature of Arabic-speaking lands, Israel, and Turkey. Identity, culture, religion, nationalism, conflict, and minority narratives are examined through Arabic works by Adonis, Darwish, and Qabbani. Hebrew works such as those by Amichai and Bialik are also discussed. Works written in French, English, Kurdish, Syriac, Turkish, and various Middle Eastern dialects, including the writings of Andree Chedid, Mario Levi, Charles Corm, Louis Awad, Said Akl, and Orhan Pamuk.

**ENGL247001**  
**Black and Popular: Speculative Fictions by Black Writers**  
**Frederick, Rhonda**  
**Spring 2024**

This course asks: what do discussions of contemporary social issues look like when depicted in popular literatures written by writers of African descent? What is the benefit of fictionalizing these issues in genre literatures? Students address these questions by examining the forms of "speculative fictions" (specifically thriller, science fiction/fantasy, and mystery/detective) as well as urban romance to determine how each represents concerns of twentieth/twenty-first century black peoples in the U.S., Canada, Jamaica, and Martinique. Our focus on these genres' explorations of race, class, culture, incest, social engineering, and intimate relationships is complemented by socio-historical studies of these issues and countries.

ENGL330401
King Arthur in German Literature
Resler, Michael
Spring 2024
Conducted in English with all texts in English translation. Counts toward German major, German minor, and German Studies minor. A study centering on the most popular and enduring of all medieval legendary figures. We will examine the early texts from which the Arthurian mythology took root and contributed to the eventual spread into Germany of the tales of King Arthur and the Knights of the Round Table. We will then focus on a close reading of four or five of the most significant Arthurian romances within the German tradition. In addition, we will systematically trace the relationship between this highly idealized world of literary knighthood and real-life contemporary historical and social events of the twelfth and thirteenth centuries.

**ENGL339801**  
**Chekhov On The Stage**  
**Cummings, Scott T**  
**Spring 2024**  
Anton Chekhov (1860-1904) is one of the world's most beloved dramatists, celebrated for the humanity of his plays and the appeal of his complex characters to actors and directors. This course will study the comic one-acts and full-length major plays of this great Russian dramatist, first in the context of late-19th century Russian theatre and then for their influence on American theatre in the 20th and early-21st century. Attention will be given to Chekhov's short stories, Konstantin Stanislavsky and the Moscow Art Theatre, the Group Theatre and the legacy of Method acting in the U.S., and several contemporary playwrights inspired by Chekhov. Students will write several short papers or reviews, present independent research to the class, and participate in a class-wide performance project at the end of the semester.

ENGL370301
Performing Identity on Page and Stage
Mitsein, Rebekah K
Spring 2024
Fulfills the pre-1900 requirement. Who do we think we are? Are we who we're born to be, or who we perform, or some combination of the two? How does literature help us work through these questions by enabling us to think beyond ourselves? In this course, we will situate a range of philosophies about identity and the self into literary and historical contexts. We will consider the intersections among race, ethnicity, gender and sexuality, and status or class presented in our texts. We will also critically examine modern cultural forms that people use to negotiate and understand their identities, including genealogy websites, ethnicity DNA tests, and personality tests like the Enneagram and the Meyers Briggs scale. The reading list includes work by Aphra Behn, Daniel Defoe, Olaudah Equiano, Mary Shelley, Jane Austen, George Bernard Shaw, and Jeanette Winterson.

ENGL381201
Critical Race Theory and Literature: The Power of Narratives and Counter Storytelling
DeRosa, Marla C
Spring 2024
Critical Race Theory scholarship is grounded in and privileges the sense of reality that reflects the distinctive experiences of people of color. Critical Race Theory scholar Edward Taylor notes that "CRT scholars often use storytelling, narrative, autobiography, and parable as a way to expose and challenge social constructions of race. It makes use of the experience of people negatively affected by racism as a central, validating data point. CRT thus embraces this subjectivity of perspective and openly acknowledges that perceptions of truth, fairness and justice reflect the mindset of the knower (2009, p. 8.) Starting from this premise about the power of narratives, this course will examine the ways in which literary studies have informed Critical Race Theory and the ways that Critical Race Theory can deepen our understanding of literary texts. The course will provide an overview of the writings and scholars in the field of CRT such as Derrick Bell, Patricia Hill Collins, Kimberle Crenshaw and Richard Delgado. The course will also use CRT as a theoretical framework to analyze and broaden our understanding of texts by authors such as Toni Morrison, Colson Whitehead, Octavia Butler, Claudia Rankine and Clint Smith.

ENGL381301
Building Worlds and Constructing Narratives for Video Games
Nathan, Micah
Spring 2024
In this course, students will ideate, develop, and workshop their own video game worlds. No coding experience is required: this will be a reading, playing, and writing-intensive class, with each student acting as their own narrative designer. Each student is expected to complete a written portfolio of their constructed world by semesters end, with supplemental illustrations as needed, using either AI-generated art, original art, or art borrowed from any source (under Fair Use).

Room and Schedule: Stokes Hall 207S Th 11:30AM-01:55PM
ENGL382001
Strange Doctors: Nineteenth-Century Literature and Medicine
Vachali, Krithika
Spring 2024
Who is a "mad" or "strange" doctor? What makes us see some doctors as professional or expert, while others are relegated to the realms of pseudoscience, or quackery? How might we engage with the figure of the strange doctor in the context of literature and media about doctors, nurses, care-workers, and medicine? In this course, we will look closely at fictional and historical doctors, nurses, and medical practitioners in nineteenth-century British and imperial literature to critically examine the strange doctor alongside representations of health and medicine. By bringing characters like Victor Frankenstein, Dr. Jekyll, Dr. Watson, and Dr. Moreau alongside the work of writers like Mary Seacole and Harriet Martineau, this course focuses on how the figure of the strange doctor is developed, and what cultural and literary issues it illuminates and responds to. We will consider issues such as gender, race, class, nationality, and more as we contend with the cultural lineages of these figures today, and how they have been taken up imaginatively, critically, and subversively across the world.

Sports can be one of the most important formative elements in our lives, teaching us individual discipline, the spirit of collaboration, and aspirational goals of excellence. Even more, through sports, we also encounter themes of nationalism, social class, gender, sexuality, history, and so on. Drawing on critical approaches from rhetoric, archival studies, American history, in this class we examine the role of sports in our individual lives and American culture at large. Students will learn key theoretical approaches to the study of sport, games, and play and will engage in a research project on a particular aspect of sports and culture. Learning Objectives include: 1) Students will master theories of sport and sports communication 2) Students will apply those concepts in a research project. The course will also incorporate outside-of-the-classroom activities in and around campus and the City of Boston into the course curriculum.

ENGL382201

Death of the Author: Fictions of Authorship from Modernism to Today

Paul, Benjamin W

Spring 2024
What is an author and who gets to be one? Where is the line between fiction and life? This course will explore these questions by reading a range of 20th- and 21st-century texts that play with the idea of their own authorship: our readings will cover British and Irish modernism, Caribbean epic, postmodern experimentation, and the contemporary genre of autofiction. Alongside the question of authorship, we will consider larger questions about the nature of fiction and its role in society: what changes when we read something as literature, and how does fiction-making play a role in our personal and collective identities? Readings may include works by Luigi Pirandello, Virginia Woolf, James Joyce, Samuel Beckett, Derek Walcott, Claudia Rankine, Rachel Cusk, and Ben Lerner.

**ENGL402201**

**Modern European Novel**

**Restuccia, Frances**

**Spring 2024**

A course on major European novelists of the early twentieth century: Proust, Gide, Musil, Rilke, Mann, Kafka, Pessoa. We will read modernist theory and ask: What is modernism? What is modernist temporality? How is interiority reflected? We will put modernist writers into relation with philosophy developing during this period (e.g., Heidegger, Benjamin) as well as with contemporary theory (Marxism, post-structuralism, psychoanalysis), responding in particular to Badiou’s sense of modern art in *The Century*. Does modernism's passion for the Real express itself through formalizations pointing to cracks in the Symbolic or in a less circuitous manner? A mid-term and final paper.

ENGL402301
Twentieth Century Irish Women Writers
Howes, Marjorie E
Spring 2024
This course will explore literary works by Irish women working in a wide range of genres: novels, short stories, poetry, and drama. We will investigate how women writers responded to the important political, social, and economic upheavals of the twentieth century: revolutions and wars, alterations in class structures, and changes in gender relations, sexual mores, and the status of women. We will also examine how our writers responded to, and helped shape, the major literary movements of the time, such as the Irish Revival and Counter-Revival, modernism and postmodernism. Writers to be studied include Augusta Gregory, Elizabeth Bowen, Mary Lavin, Theresa Deevy, Eavan Boland, Edna O'Brien, Paula Meehan, and Emma Donoghoe.

ENGL420201
Writing for Health and Medicine
Sutton, Sarah C
Spring 2024
Like most scientists, healthcare practitioners often publish their research in academic journals. However, they also must communicate complex science to the patients they are treating, and often to the public at large. Writing for Health and Medicine is a writing workshop focused on helping students develop the storytelling skills needed to communicate health care, medical, or scientific perspectives and messages to a variety of audiences and through multiple mediums. Over the course of the semester, we will explore a range of writings by physicians and other health care practitioners, and also by patients and journalists. We will cover every step in the writing process, from brainstorming to researching to writing to revising as well as the steps needed to pitch and publish an article or essay. Assignments will include reviews of articles and books, podcasts, social media, op eds, and narrative writing. This course is designed for students who wish to pursue a career in the health and medical fields; however, it is appropriate for anyone with an interest in the health sciences who wishes to improve their writing skills.

ENGL437301  
Korean Film and Popular Culture  
Klein, Christina  
Spring 2024
Requires weekly film screening outside of class time, Mondays, 7-9 PM Korea today is producing some of the most vibrant popular culture in the world. This course takes up Korean film, television drama, and music from the late 1990s to the present. We will look at popular films (Train to Busan), art films (Poetry), and films that defy easy categorization (Parasite). We will explore how television dramas grapple with contemporary social issues such as educational pressures (SKY Castle) and explore how K-pop groups (BTS) have achieved global superstardom. Throughout we will investigate the intersections of popular culture and political, economic, and social history.

**ENGL453601**  
**Joyce's Ulysses**  
**Nugent, Joseph G**  
**Spring 2024**

One single semester. One demanding class. One hugely important book. This course will lead you on an extended exploration of Joyce's *Ulysses*. Joyce is intermittently baffling; he's always fascinating; he's frequently hilarious. He's never less than challenging. No prior knowledge of Joyce's works is required, just a willingness to tackle the challenges offered by this wonderful, astonishing, intricate text. *The demand that I make of my reader, he wrote, is that he should devote his whole life to reading my works.* I think a semester will do. Mainly for the daring.

ENGL453801
Visual Culture in Black America: The Art and Politics of Seeing and Being Seen
Jones, Jovonna
Spring 2024
This course fulfills the Race, Blackness, and Language requirement for English majors. In this course, we will examine the significance of visual culture for Black America, thinking critically about the art and politics of seeing and being seen. We will keep in mind the following questions: what does it mean to see blackness? How do images function as tools of empowerment and disempowerment, or representation and misrepresentation? What role does visual media play in Black life and imagination? Photography will be central to the study of visibility, but we will also consider what role other media play in the production of blackness as a visual phenomenon: literature, performance, and music videos. Authors and artists may include Frederick Douglass, Sojourner Truth, Ida B. Wells, W.E.B. Du Bois, Josephine Baker, Gordon Parks, Spike Lee, Hype Williams, Melina Matsoukas, Claudia Rankine, and LaToya Ruby Frazier. Assignments will include weekly discussion posts on readings and images featured in the course, and one creative project that may take the form of a photo-essay, critical paper, or video related to Black visual culture.

The course will provide an introduction to poetry writing as a discipline and craft by encouraging students to practice writing in a variety of modes. Students' own poems, from both open and directed writing assignments, will become the main text for this workshop, in addition to some models provided by the instructor for discussion of prosody and technique. The workshop critiques will focus on strategies for revising early drafts, and a chapbook of finished poems will be due from each student at the end of the semester. No application process.

Writing Workshop: Fiction
Boucher, Christopher G
Spring 2024
Enrollment limited to 15. This course provides encouragement, practice, and criticism for students seriously interested in writing short fiction. The workshop format demands self-motivation and universal participation. Since students' stories are texts for class discussion, a generous willingness to respond to others' writing and to expose one's own work to such reactions is an essential prerequisite. Individual conferences with the instructor supplement the workshop discussions. Students are expected to produce a steady stream of new and revised fiction throughout the semester. Narrative preferences from the traditional to the experimental are welcome.

Dante's "Divine Comedy" in Translation
Costanzo, Maria Sole
Spring 2024
Conducted in English. Elective for Italian major or minor. An introduction to and critical reading of the "Divine Comedy" (in English translation), one of the world's greatest epic poems, produced by "the chief imagination of Christendom" (Yeats). Dante's journey through Hell, Purgatory, and Paradise will be analyzed at its multiple levels of interpretation: literal and allegorical, theological, philosophical, political, and literary. Compendium of an entire epoch of European civilization, the "Comedy" will also be interrogated for its responses to the fundamental questions of human existence: God, the Cosmos, the Self, Good and Evil, Right and Wrong, Suffering, and Happiness.

ENGL491701
Advanced Poetry Workshop
Matson, Suzanne M
Spring 2024
Admission to this course is by permission of the instructor. Graduate/Undergraduate Level. Restricted to Graduate Students, Seniors, Juniors and Sophomores. This is a workshop for those who already have some experience writing poetry, and who wish to work intensively on matters of craft and revision. Students will produce roughly two poems a week, responding to each others drafts in workshop discussion. Though the bulk of class discussion will be about student writing, some class time will be devoted to a discussion of useful models and what they can teach us about strategy and craft. Short in-class exercises will be given weekly as prompts to begin the writing process. In ongoing consultation with the instructor about which poets might interest them most, students will devise their own reading list of contemporary poets and keep a response journal. In at least two half-hour conferences over the semester, each student will be given individual feedback on revisions. The final project will be a chapbook of at least 12 revised poems produced over the semester, culled from around 25 drafts produced in and out of class. Admission is by writing sample. Please email the instructor for application instructions.

ENGL502701
Seminar: Literary Boston 1790-1860
Lewis, Paul
Spring 2024
Fulfills the pre-1900 & seminar requirements Walk the streets of Old Boston in this course that explores familiar and forgotten chapters of literary history. Spend a night at the Federal Street Theatre during the 1790s. Search early Boston magazines for forgotten treasures. Meet the poet buried on Boston Common. Find out why Edgar Allan Poe called members of the Boston literati "Frog-Pondians." And watch the American Renaissance flower. Authors studied will include Judith Sargent Murray, Lydia Maria Child, Charles Sprague, Henry Wadsworth Longfellow, Nathaniel Hawthorne, and PoeBostonians all! Visits to literary sites and explorations of online archival materials will help transport us back in time.

Note: Students may not receive credit for this course and ENGL4404: Literary Boston 1790-1860

ENGL503001
Seminar: Irish Hybrids: Vampires, Mermaids, and the Eco-Imagination
Taylor, Colleen B
Spring 2024
Half-human, humanoid, and therianthropic creatures have captured the Irish and wider human imagination for centuries. This quasi-human, half-human trope can teach us about human relationships with the environment and about colonialism in Ireland. Using cutting-edge theories of the environmental humanities, blue/oceanic humanities, and posthumanism, this class examines the literature and lore of vampires, mermaids, and an enchanted environment from the seventeenth to the nineteenth century. We will read this Irish, more-than-human world in relationship to the Enlightenment ideology of British culture during the same period, exploring how they contrast and illuminate one another. Readings will include texts by Jonathan Swift, Elizabeth Sheridan, Brian Merriman, Eibhln Dubh N Chonaill, William Carleton, as well as oral folklore.

Credits: 3
Room and Schedule: Stokes Hall 207S M 02:00PM-04:25PM
This course will explore the depiction of irresolvable tensions and mixed emotions in literature by current American women writers. As we focus on the tensions between love and fear, intimacy and violence, presence and absence, desire and disgust, we will think about how literature succeeds in conveying the intangible dynamics of feeling through language, imagery and form. Some of the topics we will explore include grief, aging, caregiving, pregnancy and motherhood, love and desire, physical and mental health, and domestic abuse. Although we will acknowledge the significance of gender conventions and the way they influence our everyday lives, our goal will be to interrogate rather than essentialize what it means to be a woman or a woman writer. In that regard, we will consider how embodiment and identity are shaped by race and ethnicity, age, sexuality, family dynamics and trauma -- as well as gender -- in these works. This is a class designed to explore connections between literature and lived experience. Community, creativity and original thinking will be highly valued. Required texts include Roz Chast's graphic memoir, Cant We Talk About Something More Pleasant?, as well as short fiction, poetry, and four novels: Louise Erdrich's Shadow Tag, Yaa Gyasi's Transcendent Kingdom, Nicole Krauss' The History of Love, and Marilynne Robinson's Housekeeping. Requirements will include an in-class presentation, two critical essays, a take-home final exam with an optional creative component, and class participation.

ENGL551701
Capstone: Love and Indoctrination
Kaplan-Maxfield, Thomas
Spring 2024
Capstone classes may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Seniors only. In our world of political spin and fake news, the surveillance state and social media, the pressure to separate what's real and valuable from what's fake and mere propaganda (another way of saying lies) is paramount, and critical for figuring out how to live, practically, spiritually, intellectually and psychologically. In George Orwells 1984, the affair of Winston Smith and Julia threatens the entire structure of Big Brother. Why? What is it about love that threatens large systems based on indoctrination? In this course we will explore and develop working definitions of both love and indoctrination in order to differentiate them.

Credits: 3
Room and Schedule: Stokes Hall 133S Tu 04:30PM-06:50PM
ENGL552201
Capstone: Creativity and Self
Roberts, Susan A
Spring 2024
Capstone classes are for seniors only and may NOT be taken Pass/Fail. You may take only ONE Capstone class before graduation. Creativity is the act of bringing that which does not exist into existence, of bringing forward that which has previously never lived. It is the remarkable experience of bringing something out of nothing. In order to bring something new into the world, you must be willing to go into the unknown. Just as the poet might listen inwardly and stay open for the next word and just as the artist might pay attention to the images that arise from within, creativity asks that we have one foot in what is known, or existence, and one foot in what is not-known, or non-existence. This requires an ability to be still, to look both inward and outward, and then to record the resulting art-making or in life. In this Capstone course, students will attend to two areas: the meaning of art and mindfulness, and their own history of making (or lack thereof) and how they would like to build artistic sensibility, creativity and creation into their lives. We will investigate the spiritual roots of creativity, and the ways in which creativity and appreciation of art and art-making can contribute meaningfully to the development of one as a full citizen of the world. You do not have to have any experience in art-making to take this course. Texts include: Creativity: Where the Divine and Human Meet, by Matthew Fox and Art and Fear: Observations on the Perils (and Rewards) of Artmaking, by David Bayles and Ted Orland, Start Where You Are: A Journal for Self-Exploration, by Meera Lee Patel (you should write in this every week; you'll be presenting it in your "exit interview" at semester's end)

ENGL601701

Seminar: Chaucer and Gower

Weiskott, Eric B

Spring 2024

Fulfills pre-1700 and Seminar requirement for undergraduates. In fourteenth-century London, Geoffrey Chaucer and John Gower were frenemies. Chaucer was the upwardly mobile bureaucrat, ready to poke fun at everyone; Gower was the well-heeled and straitlaced lawyer. Their bodies of poetry, spanning four decades and three languages, influence and respond to one another. We will read the two poets side by side, with attention to topics of mutual relevance such as multilingualism, politics, literary form, source study, and social status. This seminar has no overlap with the syllabus of ENGL6041: Game of Thrones: Medieval English Political Poetry. No prior knowledge of Middle English required. Gower’s French and Latin texts read in translation.

ENGL630301

Seminar: Disability Studies

Boesky, Amy

Spring 2024
This grad/undergrad seminar will consider constructions of norms and embodied otherness in literature and culture. Readings will include theoretical texts by Alison Kafir, Lennard Davis, Elizabeth Grosz, Tom Shakespeare, Simi Linton, Rosemarie Garland-Thomson, and Tobin Siebers, among others. Literature, film, and other forms from several periods and perspectives will supplement our exploration of the dynamic (and problematic) representations of able-bodiedness as well as disability. Responsibilities will include a presentation and short paper, several short critical and creative exercises, and a final substantive paper. Fulfills the theory requirement for English MA students. Fulfills the Seminar requirement for English majors. Fulfills an advanced elective for Medical Humanities minors.

ENGL630501
Seminar: Beckett
Sofer, Andrew
Spring 2024
This course introduces a major Irish (post)modernist writer, arguably the most important playwright of the twentieth century. Reading a range of Beckett's fiction and drama, and with the help of various critical essays, we will place Beckett in his biographical, geographical, theatrical, and historical contexts. Texts will include Waiting for Godot, Endgame, short fictions early and late, and several plays for television. Work will include a class presentation, a short project, and a final long essay for which original archival research in Burns Library is an option. No previous familiarity with Beckett is required.

ENGL669901
Seminar: Old English
Stanton, Robert G
Spring 2024
Fulfills the pre-1700 requirement. Undergrad/Graduate Level. Restricted to Juniors, Seniors, and Graduate Students. Anglo-Saxons ruled England for 600 years, and their language is both familiar and strange. The core of English (stone, water, bone) comes from Old English, but English has changed in 900 years. Grammar is learned quickly. Then a world of literature opens up: violent poetry, mournful elegy, spiritual meditations, fanciful romance. We read Genesis, Anglo-Saxon Chronicle, Bede's Ecclesiastical History, mesmerizing homilies, Boethius' Consolation of Philosophy, and unforgettable poetry: the moody elegies The Wanderer, The Wife's Lament, and The Husband's Message, the Christian psychedelia of Dream of the Rood, the cryptic remnant Wulf and Eadwacer, and the feminist Biblical narrative Judith.

ENGL702001
Experimental Writing for Scholars
Rotella, Carlo
Spring 2024
Research and the field knowledge doesn't always have to lead to writing the usual scholarly papers and articles. In this workshop-style graduate seminar, we try out alternative forms presented by journalism, the essay, and other traditions: magazine feature, op-ed, interview, explainer piece, reported essay, memoir, obituary, digital forms, and more. Our objective is to expand our writerly repertoires and audiences. We write and workshop every week, and analyze examples of the genres we study. We also have class visits from colleagues who offer their own perspective on the rich variety of forms available to the experimentally ambitious scholarly writer.

ENGL703201
Irish Environmental Fictions
Connolly, Claire A
Spring 2024
A course that tracks Irish literary engagement with forms of environmental knowledge, beginning with contemporary fictions of climate crisis and tracking back to the beginnings of the Anthropocene in the eighteenth century. Authors to be studied include Mike McCormack, Paula Meehan, Sinad Morrisey, JM Synge, Jane Barlow, James Clarence Mangan, Lady Morgan and Maria Edgeworth; topics to include scale, periodisation, hunger, food security, energy and interdisciplinarity. The course will also explore the literary inscription of specific Irish environments including coast, shore, bog and mountain.

ENGL703301
Doing What Happens: Action and Event in Modern Literature
Lehman, Robert S
Spring 2024
Can works of art and, especially, works of literature teach us anything about what it means to act in the world? Should we treat these works as themselves the products of meaningful actions? Or should we think of them instead as the effects of unconscious (social or libidinal or linguistic) forces? Have current events climate change for example thanks to their complexity or their scale, made effective action harder to imagine? In this class, we'll consider how these questions are broached in works of literature, philosophy, and visual art composed over, roughly, the last century and half. We'll likely discuss novelists including Joseph Conrad, Samuel Beckett, and Tom McCarthy; theorists including Elizabeth Anscombe, Bruno Latour, and Walter Benn Michaels; and visual artists including Marcel Duchamp, Jackson Pollock, and Robert Smithson. This class should be of interest to students of literature, students of philosophy, and anyone who wants to develop a more thoughtful relationship to literary texts. Assignments will include Canvas posts, a book review, and a longer seminar paper. Fulfills the graduate theory requirement.

ENGL770001
English Language Training for Graduate Level Students: Focus on Speech and Presentation Skills
Dept, Dept
Spring 2024
Designed for students whose first language is not English, this course will emphasize the oral/aural language skills required for success in graduate work. It will provide students the opportunity to hone their speaking and listening skills through group discussions, presentations, and targeted practice in pronunciation, stress, and intonation through the reading of poetry and tongue twisters. The course may be particularly beneficial to those with teaching responsibilities at BC. Non-credit and offered free of charge by GSAS to its students during the fall semester. Students who enroll in the course are expected to attend all classes throughout the semester. The course is restricted to students in the Morrissey Graduate School of Arts and Sciences. If space permits, students from other schools will be considered. Admission to the course is by application and permission of the instructor.

ENGL778201
Issues and Methods in American Studies
Klein, Christina
Spring 2024
This course offers an introduction to the field of American Studies, which focuses on the interdisciplinary study of American culture. We will read a range of recent scholarship, exploring diverse approaches, methods, and issues of interest. In the process, we will assemble a "tool kit" of critical skills for making interpretive arguments about works of culture in their historical moments. The cultural forms we analyze may include popular fiction, film, music, painting, and material cultures. Students write a research paper on a cultural artifact of their own choosing.

ENGL827501
Capstone: Digital Humanities as Public Scholarship
Sturgeon, Stephen C
Spring 2024
Many schools across the United States teach different versions of survey classes for which instructors have to reach outside their own focuses. To do so, those instructors often search for visualizations of historical change, literary development, and examinations of religious networks, depending on the field and course. In this capstone, graduate students will develop projects within their areas of specializations to produce digestible digital exhibits, visualizations, and more that can be made freely available to scholars across the world. The goal would be to promote the free exchange of high quality information and digital sources available in the public domain. Furthermore, through the capstone, students should understand the process of a project from conception to presentation. They should have developed skills engaging metadata, transcription, the process of digitization, and more. Students can bring their own research data from their dissertation project or from previous coursework, or they can be provided with a historical or literary dataset from the Boston College Libraries to utilize over the semester.
There are four phases to the class, beginning with performing an environmental scan and writing a proposal for their project. In Phase II and III, students will implement and carry out their projects. Finally in Phase IV, students will engage in peer consulting and prepare their work for online publication.

ENGL882501
Composition Theory and the Teaching of Writing
Pauszek, Jessica M
Spring 2024
This course is designed to (1) prepare graduate students to teach introductory, college-level writing courses; (2) introduce students to central issues, problems, and theories in composition studies; and (3) encourage students to examine the interanimating relationship between critical theory, practical writing experience, and the teaching of Composition/Rhetoric. Though the emphasis is on central, nuts-and-bolts tasks in the teaching of writing (e.g., designing assignments; responding to student essays; selecting texts for discussion; etc.), this is not a prescriptive "how to" course; students are asked to consider pedagogical issues and choices in composition studies from a variety of personal and theoretical perspectives.

ENGL991501
PhD Seminar: The Unwritten Eighteenth Century
Mitsein, Rebekah K
Spring 2024
As we face down racial hostilities, environmental catastrophes, and anti-LGBTQIA+ legislation in the twenty-first century, literary studies needs to be more flexible than ever before. Yet, the study of the literature of the past can feel bound by the white, Eurocentric, anthropocentric canon that is its inevitable object of study as well as by historicist methods that govern the field, which grew in collusion with racist and imperial worldviews. Taking a broad body of eighteenth-century texts as its case study, this class will explore different methods that scholars are using to make the world outside the written canon central to the field and breathe new life into literary history.

Environmental Law and Policy in the United States and Europe

Fowley, Jeffry T

Summer 2023

This course will cover environmental law and policy in the United States and Europe. Taught in London, it will compare the environmental laws and policies of the United States to those established by the European Union (EU), while also assessing the consequences of the United Kingdom (UK) leaving the European Union (Brexit). The United States initially (during the 1970s) led the world in formulating environmental policies. However, the European Union later became a strong environmental actor, leading to the establishment of strict environmental standards throughout much of Europe. In many areas of environmental law and policy, it is now Europe that leads the world. Thus, this course will cover European as well as U.S. approaches to environmental protection in order to learn about the most protective approaches. While there are many similarities regarding how environmental issues are being addressed in the United States and Europe, this course also will assess the key differences. Understanding both the similarities and differences will help students to understand how major environmental issues can best be addressed. This course will be useful to pre-law students who want to learn about the different kinds of environmental laws. However, this course will be focused more on policy issues rather than requiring extensive legal analysis, and thus should be accessible to students with a variety of different backgrounds. This course will emphasize the practical aspects of environmental law and policy. There will be field visits related to topics discussed in class, and guest speakers from the U.K. environmental agency. This will be a small interactive class with extensive opportunity for class discussion. This course also will provide an opportunity for students to develop their writing skills. There will be four short written exercises (in lieu of exams), with the instructor providing detailed written comments on all of the writings.

ENVS356201
Environmental Sociology I
Thombs, Ryan P
Summer 2023
This is an upper-division seminar that provides an overview of theoretical and empirical work in environmental sociology. After a brief introduction to the origins of the field, the seminar will cover topics that are representative of what is current in the area, especially bodies of empirical research that are national, international, and global in scope, and with particular attention given to how large-scale social institutions and organizational forms impact the environment. We will focus on the social dimensions of environmental impacts, the anthropogenic drivers of environmental impacts, and sociological research on solutions to environmental crises. A key takeaway of the course is the necessity in taking a structural approach to the study of socioenvironmental relationships. Attention will also be given to how environmental sociology makes fundamental contributions to interdisciplinary research in environmental studies and sustainability science. The course is required for all Environmental Studies majors.

Environmental Studies Courses: Fall 2023

ENVS170201
The World With Us: Conserving Nature in a Time of Crisis
Offen, Vena
Fall 2023
This is an Enduring Question course and is open to FRESHMAN only. You must also register for the accompanying ENGL1737. These courses address the relationship between humans and their environment. Exploring both imaginative and scientific approaches to ecology, we will study how humans have exploited nature, but also how the environment is inextricable from the human experience. Through case studies from ecological literature and conservation science, we will develop skills in identifying environmental degradation, crafting equitable solutions, and expressing ourselves in writing and speech. These courses take a comparative approach to analyzing the history and tradition of diverse narratives of environmental exploitation and conservation through readings from South Asia, Small Island Nations, the Americas, West Africa, and others.

Ideas and Practices in Environmental Studies  
Burns, Jennifer L  
Fall 2023  
An introduction to the history, ideas, and practices of the field of environmental studies for new ENVS majors. This interactive course will draw on cross- and inter-disciplinary perspectives from the natural sciences, social sciences, and humanities to explore different ways of thinking about complex environmental topics. Case studies of contemporary environmental challenges will be paired with discussion of significant texts within the field to showcase how our understanding of the environment and our relationship to it - is always evolving.

ENVS224101  
U.S. Partisanship and Climate Policy  
Kurz, David  
Fall 2023  
Most Americans from both major political parties believe in climate change, yet bipartisan climate action is fairly uncommon why? To understand how we got here, this interactive class will explore partisanship, climate policy delay, and the history of the environmental movement in the United States. Students will then apply this knowledge to analyze legislation and advocate for bipartisan climate solutions amidst a bitterly divided socio-political environment. Seminar-style policy discussions will cover topics such as renewable energy, emissions cuts, infrastructure, terrestrial and marine conservation, and other current U.S. climate policy challenges.

The Vegetative Soul: The Hidden Life of Plants
Vandewall, Holly R

Fall 2023
By weight, more than 80% percent of the living things on the earth are plants, and without them the earth's animals, including humans, would perish within weeks. But philosophy has spent a vanishingly small part of its efforts in considering this form of life, generally relegating plants to the status of minimally alive, but essentially uninteresting. As Michael Pollan notes, "plants are so unlike people that it's very difficult for us to appreciate fully their complexity and sophistication. Yet plants have been evolving much, much longer than we have, have been inventing new strategies for survival and perfecting their designs for so long that to say that one of us is the more 'advanced' really depends on how you define that term, and what 'advances' you value'." This class will consider how humans have historically regarded the plant kingdom, what we can learn from the challenging imaginary exercise of attempting to understand how they live, and how we might reconsider the world if we came to regard the plant kingdom not as passive subjects of human actions, but as powerful and vital actors in their own right.

ENVS250101
The State of Affordable Housing in the States
Houston, Elizabeth Ann; Korman, Henry A
Fall 2023
Course offered for Sophomores only. How does housing affect the lives of Americans? Where you live determines your access to schools, quality of healthcare, fresh food, clean air, parks and recreation, affordable credit, and even how long you are likely to live. This course explores concepts of housing policy and planning at the national, state, and local levels. It examines programs and policies used to subsidize housing for millions of Americans and help them gain access to a decent place to live. Topics will be considered from multiple perspectives including housing finance, design, community planning, inequality, operations management, and sustainability. We will explore the historical and economic context of U.S. housing and discuss the barriers that low-income families face that affects their access to decent housing. The course will be divided into three sections: history, policies, and today's issues. Students will explore some of the most recently developed programs and how they fit into effective community revitalization. These programs will be evaluated in class discussions and group presentations.

Sustainable Cities
Bolin, Jessica L
Fall 2023
About 4.2 billion people around the world live in cities today, with this figure expected to double by 2050. Improvement of the urban environment is therefore crucial to a sustainable planetary future. In this course, students will examine current best practices for urban sustainability and resilience in areas such as restoration of watershed health, mitigation of air pollution and soil toxicity, management of solid waste, reduction of the urban heat island effect, improvement of mass transit and infrastructure, support of urban agriculture alongside a variety of other environmental justice efforts, and preparation for sea level rise, extreme weather events, and rising temperatures.

ENVS335601
Seminar in Environmental Law
Fowley, Jeffry T
Fall 2023
This is a seminar intended for undergraduates (both pre-law and non pre-law) interested in environmental law and policy. It covers selected topics in depth and thus is a good supplement to the introductory Environmental Law and Policy course, although the introductory course is not a required pre-requisite. Topics covered include: (1) the Clean Water Act and the Boston Harbor cleanup; (2) the RCRA hazardous waste regulations; (3) contaminated (both superfund and brownfield) site cleanups; and (4) sustainability/toxic use reduction efforts by businesses. This course will emphasize the practical aspects of environmental law and policy including learning how to read and understand environmental regulations and permits, and will include several written exercises (in lieu of exams). This course is open to seniors and juniors. Sophomores may be admitted, but only with the permission of the instructor.

**Research Methods in Environmental Studies**  
**Kurz, David**  
**Fall 2023**  
For Environmental Science majors and minors only. The course is designed to prepare majors and minors in Environmental Studies to pursue a senior thesis or seminar research project. The course helps students develop a research question from their interest and curiosity in an environmental topic. Students are introduced to qualitative, quantitative, and spatial methods that are used in environmental studies research. Students then design a study to answer their specific research question.

**History of Scientific Illustration**  
**Wunsch, Oliver M**  
**Fall 2023**
What role do images play in the production of scientific knowledge? This course explores the different ways artists, scientists, and philosophers have answered this question from the Scientific Revolution to the present. We will adopt a broad definition of scientific illustration, looking at examples that range from seventeenth-century paintings of monstrous oddities to twenty-first-century brain scans. Major topics will include the relationship between art and science, the aesthetics of the diagram, the concept of visual objectivity, and the history of data visualization. We will examine the use and abuse of images in scientific rhetoric, from the visual foundations of scientific racism to contemporary depictions of climate change. Through historical case studies, students will learn how aesthetic conventions and design innovations have been used to manipulate information. By the end of the semester, students will have the ability to interpret images with a more discerning eye, critically analyzing how knowledge is constructed through representation.

ENVS: Senior Research Seminar I
Pisani Gareau, Tara
Fall 2023
This year-long seminar is for seniors who are majors in the Environmental Studies Program. To assist with the transition from college to the next stage of a student's career, the seminar focuses on the further development of applied multidisciplinary research, accessible writing, project coordination, and public speaking skills. Students spend the first semester engaging with scholarly materials and developing proposals for a research project. During the second semester, students complete their research projects, potentially collaborating with a campus or community organization to address an environmental problem.

Environmental Studies Courses: Spring 2024

ENVS107501
Understanding and Protecting Our Oceans in the Wake of Global Change
Humphries, Courtney; Offen, Vena; Olins, Heather C
Spring 2024
This is a Complex Problems course and is open to FRESHMEN only. You must also register for the accompanying lab ENVS1076 or BIOL1707. The ocean, which covers more than 70 percent of the Earth's surface, is vital to human societies. Yet, we have better maps of Mars than our own sea floor. This course introduces students to what we know and don't know about marine biodiversity and ecosystem services. It then describes the effects of climate change on the ocean--including rising temperatures, acidification, and sea level rise--and the resulting impact on life within and outside of the ocean. We end discussing the importance of effective governance and explore innovative ways in which people are working to repair and protect the ocean.

**Credits:** 3

ENVS223001
Geographies of Nature and the Environment
Getzoff, Joseph
Spring 2024
The study of the environment is urgently important in an era of global climatic change. Geography and other social sciences have long offered critical ways to understand the entangled relationship of humans and their physical environment. This course is an introduction to the many ways to think critically about this relationship, drawing from a robust body of scholarly debate. The course will engage with many topics that explore the significance of the environment in relation to human societies: we will look at the construction of nature as a foundational idea in human cultures, the intersection of economies and ecologies, the histories and legacies of colonial environments, political ecology and conflicts over resources, the shaping of the non-human animal, the science and politics of climate change, and engage with critical questions of environmental justice in an ever changing and globalized world. We will not focus on any one region, instead opting for a global survey of cases that will allow us to critically interrogate the meaning of nature and the environment in relation to human societies past, present, and future.

ENVS224601  
**Earth Ethics: Morality, Religion, and Social Justice**  
**Powell, Russell C**  
**Spring 2024**
Humans current ways of living do more than threaten Earth's life-sustaining capacities; they threaten existence itself. This course will examine differing moral visions of Earth ethics that seek to support the common good. The complex relationship between climate change and social justice will be a main focus, and will be explored through the lenses of Christianity and other religions. Topics to be covered include: humans proper role as moral agents, environmental virtues, the place of religion in addressing ecological crises, and more. The methodologies of liberation theology, ecofeminism, environmental justice, and critical perspectives from the Global South will be emphasized.

ENVS225601
Environmental Law and Policy
Fowley, Jeffry T; Sullivan, Shane R; Ward, Edwin J, IV
Spring 2024
This is the introductory survey course for undergraduates interested in environmental law and policy, including both pre-law and non-pre-law students. The course is team taught by law students, under the supervision of BC Law Professor Jeffry Fowley. Several sections of this course are offered each spring term. The course covers the major environmental protection areas, and current issues, such as air and water pollution, climate change, regulation of toxic wastes, cleanup of contaminated sites, environmental justice, and ecosystem and endangered species protections. It also introduces students to the American legal system by covering a range of environmental legal actions, including both common law lawsuits by private persons, and governmental regulation and enforcement under the major environmental statutes.

ENVS226101
Environmental Journalism: Science, Society, Solutions
Humphries, Courtney
Spring 2024
Note to Journalism minors: this course satisfies the requirement for an elective with a critical"orientation." This course allows students to study, and gain practical skills in, the craft of environmental journalism. In the first unit, we will learn techniques for conveying complex scientific information and ideas to readers. In the second unit, students will explore how to write about social, economic, legal, and political aspects of environmental issues, including environmental justice. In the third unit, students will learn techniques of the emerging practice of solutions journalism, including how to report on and evaluate positive stories of solutions without falling prey to hype. Assignments will build toward a final project that integrates these skills into a finished piece.

ENVS227501
Communication, Consumerism, Capitalism
Erol, Ali Ersen
Spring 2024
This course may be used to satisfy one of four electives required within the Communication major. This course explores the complex relationships between rhetorics, representations, and constructions of consumption and production within the capitalist political economy. In this course, we use our relationship to food as the main vehicle to explore different aspects of the US environmental history: from the pre-contact period to colonialism to the conservation movement, to urbanization, suburbanization, to the effects of the most recent COVID pandemic on food systems, and how food, as well as our relationship to it, has changed over time. We explore how food travels and has traveled from a seed in a farm to our fridges to a meal on our tables in our homes, in our dining halls, and in our food pantries over different periods of time. Examining the effects of settler colonialism, slavery, patriarchy, climate change, imperialism, and capitalism on food production and consumption, this course traces the how as well as the why of what we eat today. This includes not only the various social forces that shaped our food production and consumption habits but also the rhetorics and representations of food over this period of time. Additionally, the course delves into various examples of alternative food systems that have existed and still exist in the U.S. and encourages students to think critically about not only the consumption of the food they eat, but also its production, representation, and rhetoric. As such, we take a comprehensive as well as a critical look at the complex web of relationships between political-economic structures and symbolic systems that sustain or challenge it.

ENVS313201  
**Sociology of Natural Resources**  
Gao, Lijing  
Spring 2024
This course explores the relationship between societal constructs and the perception, utilization, and preservation of natural resources (i.e., air, water, cropland, wetland, and forest). The curriculum is divided into two units. The first introduces students to sociological theories that shape our understanding of human influences on natural resource management. The second unit empowers students with social research methodologies to investigate socio-economic, socio-psychological, structural, and cultural factors that affect natural resource management decisions and their impact on ecosystems through practical projects. This course offers critical analytical skills and a nuanced understanding of current issues involving societal influences on natural resource management.

ENVS331501

Sustainable Agriculture

Bell, Winnie F

Spring 2024
Over the past 50 years, the industrial agriculture complex has led to amazing increases in grain yields which has met the basic calorie needs of much of the world's population. However, intensive production practices have come at a high environmental and social cost and climate change now presents many new challenges to farmers. A new approach to food production is needed—one that not only restores the ecosystem services on farmland and reduces fossil fuel inputs, but also one that supports farm families, builds communities of cooperation, and promotes human health. This course explores the historical basis of agriculture, the concept of sustainability, the agricultural practices that lead to improved ecosystem services, and alternative marketing approaches and cultural relationships. Students will come away from this course with an in-depth understanding of what sustainable agriculture is and how it can be applied to various situations in the world.

**ENVS332201**  
**Marine Conservation Science**  
**Offen, Vena**  
**Spring 2024**

This course explores the threats to marine diversity, and the ways in which we can preserve diversity. Covering principles from marine science, ecology and conservation biology, we ask what role does diversity play in marine ecosystems, and what are the consequences of diversity loss to ecosystem function and services. We investigate major threats to marine diversity including marine pollution, species invasion, commercial fishing, and climate change impacts. Through review of the primary literature and guided discussions, students learn about conservation efforts at the local, national and international levels, with emphasis on marine protected areas and fisheries management.

ENVS334101
Environmental Politics of the Middle East
Getzoff, Joseph
Spring 2024
This course will critically explore the contemporary and historical environmental issues associated with the Middle East and North Africa (MENA) in order to understand the relationship between nature, politics, colonialism, culture, and geography. First, the course will interrogate the geographic label, Middle East, to understand how American and European literature, politics, and culture created different bodies of knowledge and replicated popular discourses that justify intervention in West/Southwest Asia and North Africa. Understanding the Middle East as a geographical construction also allows us to critically think through how environmental issues are interconnected with the global and localized histories of colonialism, imperialism, and empire. Students will read and discuss scholarship on development, postcolonial theory, environmental history, and political ecology. Throughout the semester, students will complete a project on a topic of their choosing, developing it from start to finish with instructor and peer feedback.

ENVS334701
Environmental Justice
El Tinay, Hassan
Spring 2024
This course examines challenges and controversies associated with the unequal distribution of environmental hazards across communities. Students will explore the social, industrial, and government forces that create inequitable burdens of environmental pollution as well as movements to reduce such burdens. While a majority of the course will focus on the United States, readings will include cases from around the world. Students will be expected to actively contribute to class discussions and to complete a pilot research project on the environmental justice implications of an area of everyday consumption such as food, clothing, cleaning, transportation, or technology.

ENVS335501
Sustainable Cities
Bolin, Jessica L
Spring 2024
About 4.2 billion people around the world live in cities today, with this figure expected to double by 2050. Improvement of the urban environment is therefore crucial to a sustainable planetary future. In this course, students will examine current best practices for urban sustainability and resilience in areas such as restoration of watershed health, mitigation of air pollution and soil toxicity, management of solid waste, reduction of the urban heat island effect, improvement of mass transit and infrastructure, support of urban agriculture alongside a variety of other environmental justice efforts, and preparation for sea level rise, extreme weather events, and rising temperatures.

Research Methods in Environmental Studies
Kurz, David
Spring 2024
For Environmental Science majors and minors only. The course is designed to prepare majors and minors in Environmental Studies to pursue a senior thesis or seminar research project. The course helps students develop a research question from their interest and curiosity in an environmental topic. Students are introduced to qualitative, quantitative, and spatial methods that are used in environmental studies research. Students then design a study to answer their specific research question.

ENVS356201
Environmental Sociology I
DiDonato, Sandra J
Spring 2024
This is an upper-division seminar that provides an overview of theoretical and empirical work in environmental sociology. After a brief introduction to the origins of the field, the seminar will cover topics that are representative of what is current in the area, especially bodies of empirical research that are national, international, and global in scope, and with particular attention given to how large-scale social institutions and organizational forms impact the environment. We will focus on the social dimensions of environmental impacts, the anthropogenic drivers of environmental impacts, and sociological research on solutions to environmental crises. A key takeaway of the course is the necessity in taking a structural approach to the study of socioenvironmental relationships. Attention will also be given to how environmental sociology makes fundamental contributions to interdisciplinary research in environmental studies and sustainability science. The course is required for all Environmental Studies majors.

ENVS400601
Place-making for a Net-Zero Future: Sustainable Architecture and Landscape Design
Burns, Jennifer L
Spring 2024
Since the rise of steam power in the nineteenth century, the American way of life has been premised upon ever-increasing consumption of fossil fuels in all aspects of our economy, from agriculture and manufacturing, trade and transportation, to communications and computing. In this course, we focus on a single aspect of this carbon-reliant economy, one that centrally and intimately shapes our patterns of life, our energy use, and our expectations of comfort. Focusing on architecture and landscape design, we review the dominant patterns of building and dwelling from before and during the Industrial Revolution in the U.S. We then examine a substantial series of alternative, sustainable strategies for constructing our shelters and their surrounding landscapes.
