

# Become a Research Assistant in the Cooperation Lab!

We are looking for motivated scholars to join the lab in Fall 2021.

## What will you experience?

- 1-on-1 mentorship with graduate student or postdoctoral researcher
- First-hand experience about how to conduct research in various settings
- The opportunity to work with children ages 4-13 years.

## What will you do?

- Take part in weekly research discussions, presentations, and journal clubs
- Visit local parks and museums to share research with the community
- Work directly with research participants in-person and online
- Learn to code participant behaviors and research data
- Create research study stimuli

## What do we study?

What are the psychological mechanisms that support cooperation in humans?

Do cooperative abilities develop similarly across different cultures?

How do cooperative abilities develop in children?

How do other animals solve cooperative dilemmas?

Using a variety of methods that capture people's behavior in cooperative dilemmas, we hope to better understand how cooperative behavior is sustained in humans, how it develops in children and how it evolves.
