Equity/Racial and Ethnic Disparities in Nursing Homes: A Focus on Social Determinants and The Role of Social Work

Christina Matz, PhD, MSW, FGSA

Associate Professor, Boston College SSW Chair of the Older Adults & Families Field-of-Practice Co-Director of the Center on Aging & Work In May, the <u>New York Times</u>' analysis showed that nursing homes serving significant populations of Black or Latinx residents were <u>twice</u> as likely to have at least one COVID-19 case than those where residents were primarily white.

Also in May, <u>Konetzka</u>'s analysis found a strong relationship between race and the probability of cases and death

Note: The percent of nursing homes with at least one case based on CA, CO, CT, GA, IA, IL, MA, NJ, NV, OH, TN, and OK; the percent of nursing homes with at least one death based on CA, CO, CT, GA, IL, NJ, NV, and TN

Nursing Homes and LTSS have a long history of disparities PRIOR to COVID

- Nursing home admissions among Blacks and Hispanics has long been found to be lower relative to non-Hispanic whites among those with similar physical need (Thomeer, Mudrazija, & Angel, 2015)
- Although proportions of non-white residents have increased in the past 2 decades (Li et al., 2015, Health Affairs).
- Nursing home care remains highly segregated. Compared to whites, racial/ethnic minorities tend to be cared for in facilities with limited clinical and financial resources, low nurse staffing, and high care deficiencies (Li et al., 2015, Health Affairs)

Why?? A Social Determinants of Health Lens

Social Determinants of Health:

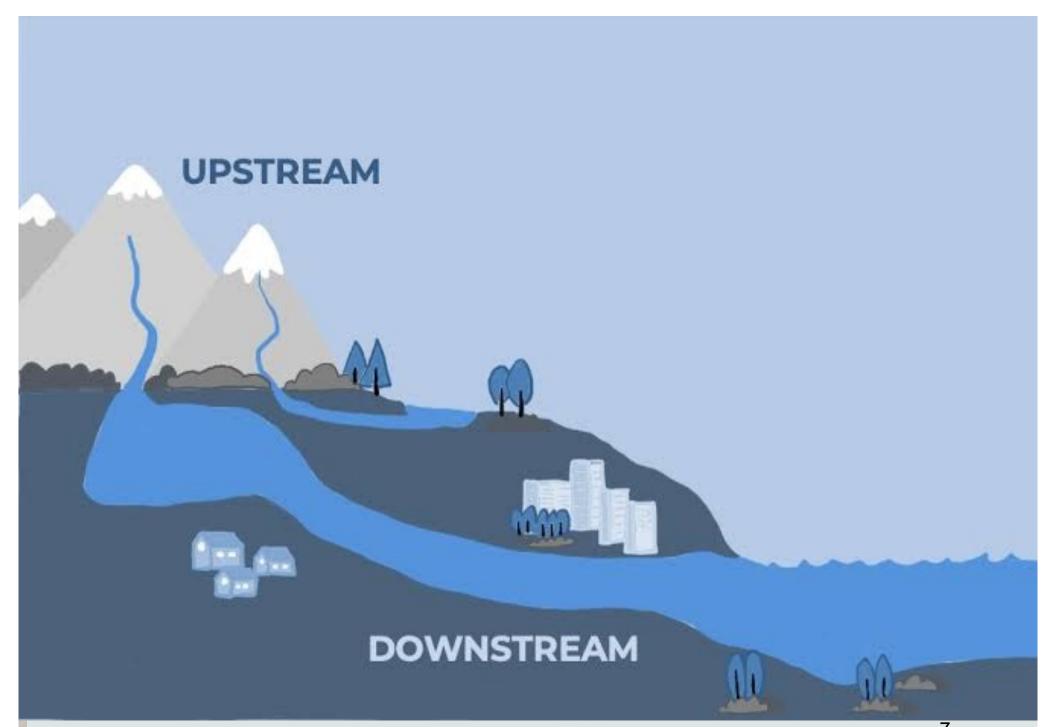

"the conditions in the places where people live, learn, work, and play that affect a wide range of health risks and outcomes." (Healthy People 2020)

Older adults from <u>communities of color and</u> <u>indigenous people are more likely to experience</u> <u>cumulative adversity in their lifetime, the outcomes</u> <u>of which are magnified by the lack of health</u> <u>insurance and adequate access to health care over</u> <u>the life course</u>. (Buchmueller et al., 2016; Chen et al., 2016).

And why in Nursing Homes?

People who need nursing home care usually want to stay close to home, <u>nursing homes are often a</u> <u>reflection of the neighborhoods in which they are</u> <u>located</u>.

Upstream determinants

- Racism
- Discrimination
- Social policies
- Poverty

DOWNSTREAM

Source: Gray, Anyane-Yeboa, Balzora, et al. COVID-19 and the other pandemic: populations made vulnerable by systemic inequity. Nat Rev Gastroenterol Hepatol (2020). https://doi.org/10.1038/s41575-020-0330-8

UPSTREAM

Midstream determinants

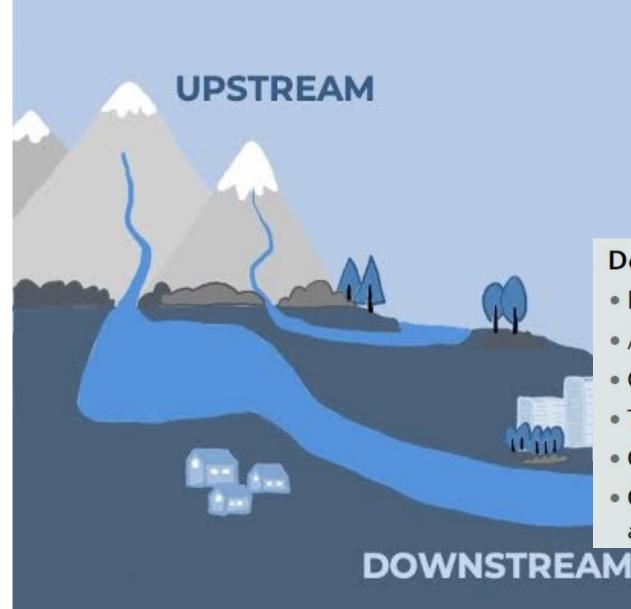

- Educational attainment
- Employment status
- Safety of housing and quality of living conditions
- Stability of income
- Food security and quality of diet
- Exposure to toxins
- Medical mistrust

- Access to high-quality health care
- Access to COVID-19 testing and care
- Ability to physically distance during the COVID-19 pandemic
- Access to masks during the COVID-19 pandemic

DOWNSTREAM

Source: Gray, Anyane-Yeboa, Balzora, et al. COVID-19 and the other pandemic: populations made vulnerable by systemic inequity. Nat Rev Gastroenterol Hepatol (2020). https://doi.org/10.1038/s41575-020-0330-8

Source: Gray, Anyane-Yeboa, Balzora, *et al.* COVID-19 and the other pandemic: populations made vulnerable by systemic inequity. *Nat Rev Gastroenterol Hepatol* (2020). https://doi.org/10.1038/s41575-020-0330-8

Downstream health outcomes

- Heart disease
- Asthma and lung disease
- Obesity or overweight
- Type 2 diabetes mellitus
- Cancer
- COVID-19 cases, hospitalizations and deaths

Nursing Home/Long-Term Care Workers

- Many workers within nursing homes also share many of the same vulnerabilities experienced in the communities where COVID-19 is most prevalent.
- For example:
 - Live in predominantly non-white, low-income neighborhoods.
 - Live in families and communities with other essential workers who are unable to work at home and practice social isolation.
 - More likely to be sick, to have caregiving responsibilities for children or other family members, and to be facing financial hardship.
 - Lack of paid sick leave, fear of job loss, or a sense of dedication when staff are desperately needed may lead to coming to work sick, etc.

A Path Toward Health Equity

- Health inequalities are <u>disparities in health that are</u> <u>unjust, unnecessary, avoidable and closely tied to</u> <u>the economic, social or environmental</u> <u>disadvantages</u> that socially marginalized groups experience <u>across a life-time</u>.
- Health equity means <u>social justice</u> in health.
- Health equity mean that no one is denied the possibility to be healthy for belonging to a group that has historically been economically/socially disadvantaged.

How do we do that?

- At the most basic level, clinicians should focus on providing high quality standard of care for all patients, regardless of background.
- Work to <u>dismantle and eradicate racism, xenophobia</u>, <u>homophobia</u> and other root causes of systemic inequities.
 - Those most proximal to the inequity must be given voice to propose and implement solutions.
 - Quality improvement endeavors must include health equity as a focus.
 - A vital resource in health care facilities is adequately staffed, trained and integrated support services.

The Role of Social Workers

BSW and MSW level* social workers can offer skills during this critical time that are more important than ever.

Core functions of the social work role:

- to anticipate, assess, and address resident psychosocial needs
- Be the key liaison between the family and the facility.

[During a pandemic, that connection is more important than ever and often occurs over the phone.]

*The federal government requires only nursing homes with more than 120 beds to hire 1 full-time equivalent social services staff member, and that person does not have to hold a degree or license in social work.

The Role of Social Workers

But social workers are also trained in:

 <u>Cultural humility</u> and to understand the social determinants of health. Cultural humility is <u>key to fully understanding social</u> <u>situations and how we can be involved, or not, in the process</u> <u>of change</u>.

Cultural humility...

- adopts a learning stance while engaging in self-reflection about the cultural elements all parties bring to the table.
- a challenge to structural inequalities and oppressive systems
- Social workers can play a key role in training and supporting other staff members as well.

Thank you! Questions?
