The Behavioral Health of Venezuelan Families in Diaspora: A Cross-National Study Stress and Resilience

Many Venezuelan crisis migrants are exposed to high levels of stress both before and after migrating. We aim to conduct the definitive study of the Venezuelan diaspora in the US with a comparison sample in Colombia—a study that will provide knowledge vital to addressing the immediate and longer-term needs of Venezuelan crisis migrant families, and inform responses to future crises.

Post-Maria Puerto Rican Families Relocated to Florida: A Multisite Study of Alcohol & Mental Health

Our long-term goal is to assist Puerto Rican families in the aftermath of Hurricane Maria. A major part of this goal is identifying intervention strategies to prevent or offset alcohol misuse among adults and youth who went through the storm. We focus our efforts on alcohol misuse based on findings from our epidemiologic research indicating disconcerting levels of alcohol use among island-born Puerto Ricans prior to the storm and increases in alcohol misuse in response to trauma and migration-related stressors.

The Feasibility and Acceptability of Pre- to Post-Migration Research with Venezuelan Migrant Parents

The Schiller Institute Grants for Exploratory Collaborative Scholarship (SI-GECS) program supports collaborative research projects and creative activities in the Schiller Institute's principal research focus areas of energy, the natural environment, and health. We will conduct research to demonstrate the feasibility and acceptability of conducting research with Venezuelan migrant parents that includes data collection both prior to and after migration.

Testing a Novel Approach to Measuring the Mental Health Impacts of Exposure to Perceived Racism-Based Police-Involved Interactions for Emerging Adults in the U.S.

We aim to establish the validity of a survey measure of exposure to racism-based police use of force among Black/African American emerging adults, and extend this measure for Latino emerging adults in the United States. In extending our work to Latinos, we will account for three main domains of difference within the population: racial identity, heritage country/region, and nativity. Using the validated measure, we will examine the relationship between exposure to racism-based encounters and mental health in a national sample of emerging adults.

Understanding the needs of Post Maria Puerto Rican Migrants in New Growth Communities

Several years after Hurricane Maria, many Puerto Ricans have permanently relocated to the United States. Many Maria survivors are relocating to new-growth communities in search of better job opportunities and affordable housing. The overall goal of this diversity supplement is to inform the development of evidence-based interventions to reduce mental health and alcohol misuse disparities among families resettling in the new-growth communities.

The Role of Social Relationships in Behavioral Health Treatment-Seeking in Post-Maria Puerto Rican Migrants

The purpose of this award is to enable promising predoctoral students with potential to develop into productive, independent research scientists to obtain mentored research training while conducting dissertation research. This proposal seeks to investigate how social relationships (including social support, social integration, and negative interpersonal interactions) impact behavioral health treatment-seeking among post-Maria Puerto Rican migrants.

Longitudinal Effects of Racism-based Police Violence Exposure on Mental and Health Behavior

The proposed research is a longitudinal study of perceived racism-based trauma exposure in response to the National Institute on Minority Health and Health Disparities' call for research examining the impact of racism on health outcomes for ethnic minority populations. We aim to elucidate specific pathways and protective mechanisms related to mental health and health behavior outcomes for Black emerging adults aged 18-25 that can be targeted by mental and behavioral health preventative or intervention programs.

Recreational Cannabis Legalization and Prenatal Substance Use Laws: A Mixed-Methods Study

Recreational cannabis laws (RCL) have recently collided with often decades-old prenatal substance use laws that criminalize women's use through punitive measures. Our study will fill vital gaps in understanding the differential impacts of RCL and child protection laws on pregnant women broadly and women from racial and ethnic groups specifically. Our quantitative and qualitative findings will inform policy and clinical practice related to prenatal substance use laws within the shifting context of cannabis legalization.

Preventing Alcohol and Other Drug Use and Violence among Latino Youth

The social costs of adolescent substance use and violence are staggering. At present, however, our ability to effectively prevent substance use and violence among Latino youth is limited. The overall objectives of this study are to adapt a school-based, SAMSHA model substance use intervention to include a focus on violence prevention. This includes research and training in the areas of qualitative research, intervention adaptation, and prevention implementation and outcomes research.

Mixed Methods Research Training Program for the Health Sciences

The goal of this program is to provide a state-of-the-art methodology training to enhance the mixed methods skills of investigators. The program accepts 14 investigators per year who participate in a 3-day training program supplemented with webinars and other activities. The program matches participants with resource consultants across the United States. After matching, and following an introductory webinar on mixed methods, participants are provided an interactive 3-day summer course on mixed methods research.
