

## Algebra Qualifying Exam

Spring 2014

- Let  $\mathbb{F}_2$  be the field with 2 elements.
  - Determine the Galois group of  $x^5 + x^3 + x^2 + x + 1 \in \mathbb{F}_2[x]$ .
  - Exhibit a matrix of order 31 in  $\text{GL}_5(\mathbb{F}_2)$ .
- Suppose  $p > 2$  is prime. Classify the groups of order  $2p^2$ .
- Let  $F$  be a field and suppose the minimal polynomial of  $A \in M_n(F)$  has degree  $n$ . Show that every matrix commuting with  $A$  has the form  $p(A)$  for a polynomial  $p(x) \in F[x]$ .
- Suppose  $R$  is a Noetherian local ring and  $M$  is a finitely generated flat  $R$ -module. Prove that  $M$  is free.
- Fix a finite extension  $K/F$  of subfields of  $\mathbb{C}$ , and  $\zeta \in \mathbb{C}$ .
  - If  $\zeta$  is transcendental over  $F$ , prove that  $[K(\zeta) : F(\zeta)] = [K : F]$ .
  - Find an example of  $F$ ,  $K$ , and algebraic  $\zeta$  such that  $[K(\zeta) : F(\zeta)]$  is not a divisor of  $[K : F]$ .
- Define  $R = \mathbb{C}[x, y]/(y^4 + x^2 - 1)$ .
  - Show that  $R$  is an integral domain.
  - Let  $K$  be the fraction field of  $R$ . Show that  $K$  is Galois over  $\mathbb{C}(x)$ , and compute the Galois group.
  - For each prime ideal of  $\mathbb{C}[x]$ , determine the number of primes of  $R$  lying above it, and find generators for those primes.
- Let  $R = k[x]$  and  $M = k[x, y]/(xy)$ . Show that each of the following  $R$ -modules is isomorphic to a direct sum of cyclic factors, and describe the factors.
  - $\text{Tor}_1^R(M, R/(x))$ .
  - $\text{Ext}_R^1(R/(x), M)$ .
- Let  $k$  be a field. Find the Krull dimensions of

$$R = k[x, y, z]/(xz, yz),$$

$R/(x + y)$ , and  $R/(x + y + z)$ .
